## THE ASSOCIATION OF CAPITAL.

Suggestions for the Establishment of a Bank upon the Plan OF THE "SOCIÉTÉ DE CRÉDIT MOBILIER."

1. Association of Capital and its Benefits.—In no other country of the world is the principle of association of capital applied so fully as in the United States, and it is to this principle we are indebted for the present extension of our trade, manufactures, and commerce. Without this association of capital no banks would ever have been established, nor would we enjoy, as at present, the great facilities of railroad and steamship communication. Even our manufacturing districts, without this combination of capital, would never have reached their present flourishing position, the efforts of individuals. always proving either insufficient for large enterprises, or, reluctantly invested on a small scale, preventing their full development. Valuable as these associations are, they are all more or less confined to a certain limit, if not to a single branch of business, while we are still deprived of the great and general benefits resulting from the centralization of capital in one great monied power, an institution exerting its beneficial influence upon all leading branches of trade. Without going into details we only state that our mining and maritime enterprises would yield larger profits if assistance were to be offered by such an institution.

In England, where capital is unequally divided among the people,

enormous wealth being accumulated by some few individuals, while the large portion of the people are extremely poor, the monied power is in possession of the first-named small class, a centralization of capital would prove perilous to the country, and the masses would generally be excluded from the benefits derived from such an institution. Our position is quite different. In our country, capital is more equally distributed, and our citizens will, therefore, equally share the benefits to be derived from the judicious combinations of capital, as each contributes according to his means, a large or small sum of money in such an enterprise. France, notwithstanding her political troubles, has ultimately succeeded in such a grand plan, by the establishment of the "Société de Credit Mobilier." In giving the last annual report of this monstrous establishment, we wish to bring the attention of our readers to the great benefits that would result to small capitalists from a similar establishment in this country, and to the great impulse which would be given by such an institution to nearly all branches of trade and industry.

### Societe de Credit Mobilier at Paris.

## Last Annual Report of the Directors.

In founding this establishment we intended to give small capitalists an easy access to the large profits realized by the proprietors of real estate by the great increase of the population of our city. For the promotion of this object we divided the capital of our association into shares, at 1000 franes each. Highly satisfactory results have been obtained from the department conducting the transactions in real estate, but the maritime department will prove of far superior importance to the country.

France, with an extensive sea-shore of 600 leagues, with numerous sea-ports, some of them belonging to the best in the world; France, most advantageously situated, a great country, where labor and raw materials are fully as cheap or cheaper than in England and the United States, we say that with all these advantages France is far from having acquired the maritime and commercial position she has a natural right to claim. Deprived of the assistance offered by the accumulation of capital in one great central power, our shipping interests could not be developed. Shipping, up to the present time, has been carried on by individuals—merchants, desiring many years since, the cooperation of a monied institution to assist their experiences and skill. Individuals are unable to embark in those extensive operations in which other maritime nations have preceded us—enterprises that would lead to a closer connection between the mother country and our colonies, and open an unlimited field to the energy peculiar to the character of our people.

The maritime association we have now founded will create no competition; on the contrary, it will prove a beneficial assistance to private enterprise, offer new means for the development of a branch of industry, affording a far larger yield than hitherto obtained.

Our plan has met with general approbation, and we have succeeded in establishing successfully such an institution.

Shipping, commerce, and industry are represented by this Company. Preliminary measures have been taken already by its founders for the promotion of these interests; plans on a larger scale will be proposed immediately after this anonymous society is fully constituted, for the continuance of those shipping and fishing operations so successfully opened by the Newfoundland Company.

The founders of the Maritime. Company have fully approved the object of the French government to supply the deficiency of hands in our Colonies, resulting from the emancipation of slaves, by the importation of Coolies from the East-Indies. Large contracts for the transportation of these free laborers from the East-Indies, to our colonies in West-Indies, have been made by the Company, and, from the date of its constitution, we shall be able to fulfill all our promises.

Besides the transportation of goods and produce, we shall also try gradually to restore a better balance between the wants of consumption and the resources of production, and, further, by transplanting the working population from one latitude to another, we shall endeavor to provide a more equal distribution of labor.

The fact and the benefit of these exertions will be better understood in future, when the large movements of emigration and colonization shall be better regulated by the intervention of the governments.

The Maritime Company is to be one of the principal means of this intervention. The Company will further prove a great assistance to agriculture, by the introduction of several new processes (the exclusive right of which it has acquired) for the transformation of remains of fish and other anomial substances, into a manure equal to the best Peruvian guano, and manufactured at a comparatively small expense.

The preservation of perishable food will also form a branch of our large operations, and we shall be able to furnish excellent meats at a far lower price than those ruling at present. This process is not new, and applied for many years in several parts of South-America. The commercial communities of France, however, expect far more important facilities from the Maritime Company than those mentioned before. We allude to the establishment of a new Trans-Atlantic Steamship Line, forming a regular communication between our principal ports and those of the United States, West-Indies, and South-America.

It is high time for France to acquire her share of this great branch of industry, hitherto exclusively monopolized by England and the United States.

To such an enterprise, of course the assistance of our government will be necessary, but all its exertions hitherto made for the promotion of the commercial interests of our country make us confidently expect every facility from that quarter.

expect every facility from that quarter.

These are the most important enterprises to which the Company during the last year has paid attention by protecting and assisting them; but it is also known that our operations have extended beyond the limits of our frontiers; it was our association that gave the first start to the establishment of a company for the purchase of the Austrian Government Railroads.

Such a grand enterprise was not merely a commercial but also a

political movement, and of course could be accomplished only by the approbation of our government. Austria, with a widely-extended area and forty millions of inhabitants, is in possession of manifold resources, unequally divided among the provinces of that empire; her population, with but few homogenial elements, differ in language, religion, customs, and, until late, in their political and civil institutions. The necessity of connecting these different provinces for the easier exchange of their products and a better harmony of their interests, etc., was severely felt by the Austrian government, and the first steps for reaching this aim had already been made; still the completion of the railroad, proposed and partly commenced, proved the most important measure to be taken.

Experience, however, has proved in many similar cases that such tasks require the cooperation of private industry, and, to effect this in Austria, the government had to renounce the system of building and working the railroads and to invite foreign capitalists to complete the work commenced by the government, thus supplying the deficit of its own resources.

The distinguished men at the head of the Austrian government accomplished the solution of the three-fold problem by selling two of the most important railroad lines, together with several valuable mines, factories, etc., to a company which, by completing the roads, working the mines and the factories, now opens a large field for private industry. We need not make any further remarks in regard to the importance of this transaction for the development of Austrian commerce and industry, and the rapid increase of her wealth. It was a brilliant success of the Company, which did not hesitate to share the difficulties temporarily opposed to the exertions of the Austrian government; this success is undoubtedly a guarantee offered to the European peace.

The transaction bears a more general character. The new Company not only succeeded in acquiring the cooperation of French and Austrian capitalists; immediately after its formation nearly all cities of the European continent partook of this transaction on a large scale. Paris, Lyons, Vienna, Berlin, Cologne, Frankfort, Hamburgh, Brussels, Geneva, and other cities joined us, thus proving the powerful basis on which the industrial credit of Europe is founded.

The principal states of Europe begin to feel the necessity of giving a new impulse to all branches of industry by providing a quicker and more economical circulation for their products.

The restoration of peace will undoubtedly convince the governments of the necessity of reëstablishing a better balance of their finances and induce them to apply for credit to defray their extraordinary wants.

The usefulness of institutions, founded on a sound basis like ours, where capital is flowing in from all parts to form one large reservoir, hence to be distributed into the different channels of industry, is evident, and similar establishments must ultimately be of general benefit. They encourage economy by giving numerous chances for safe and profitable investment to small and large amounts of capital. To open an unlimited field of operation, such institutions must be

independent in their movements and carefully avoid the dangers of isolation.

To acquire the best manner of liberally distributing their capital for the improvement of all the different branches of industry, and to increase and expend their power, such institution must strive for mutual association.

The issue of bonds must be one of the most important benefits of such a general association. The interest of such bonds, after fixing the rate of the coin of that country where they are issued, could be made payable at all principal cities of Europe, thus become a circulating medium negotiable like bills of exchange, or bank bills, and abolish the differences of exchange existing between the different places.

The limits of a report like this will not admit more details in regard to the character and the regulations of large institutions of credit; but for the proof of the immense importance of such establishments it is quite sufficient to show their principles, and no further explanation is

required to prove their general utility.

The association of capital now scattered in all parts of Europe, and hoarded, perhaps, for want of employment at one central point; the direct distribution of that capital in the most useful and profitable modes; the reduction and regulation of the rates of interest in all leading markets; the introduction of a European circulating paper medium; the successive abolition of all restrictions at present interfering with the credit system, and making the same wearisome and expensive; ultimately, the uniformity of the standard of coin and credit, already the aim of the commercial classes of all countries—these will be the future objects contemplated in the establishment of credit institutions, and we shall probably live long enough to see them accomplished.

To calm the fears of those expecting great evils from the loss of capital by emigration, and its permanent investment in foreign countries, we state that a centralization of the European credit system must necessarily increase the quantity of capital, and make it available for profitable distribution. In regard to France, we have only to say that a country availing herself of the initiative, certainly enjoys the largest abundance of capital.

We now present the results of our financial operations during the last year:

| At the close of the year 1853, nearly all our funds were invested.  |             |    |
|---|-------------|----|
| The balance of 3,496,125 francs, due to us for shares, having been  |             |    |
| paid in, we are now in possession of the total capital of our Asso- | f.          | c. |
| ciation, namely,  |             | 00 |
| At the same time the balance of running accounts and the bonds      |             |    |
| issued by the Company, amounted to 65,839,059f. 75c. This           |             |    |
| balance amounts to-day to,  |             | 09 |
| Cash on hand,   | 420,936     |    |
| The profits of the Company during 1854, (including the part the     | ·           |    |
| trustees are entitled to,) amount to                                |             | 43 |
| Dividends payable,  |             | 55 |
| Total assets,   | 133,291,848 | 76 |

The balance of running accounts is nearly the same this year as it was last year, and this steadiness appears more remarkable, the ele-

ments of this capital in our receipts having experienced many alterations.

The uniformity of the balance fully proves that this condition is in no way to be considered the result of extraordinary events.

The balances of some accounts in this capital shows a reduction, but as a desirable change, the number of our correspondents has increased.

We have a number of clients who, by depositing their money on one side and drawing it on the other, cause a double tide, ultimately balanced.

It is our object to favor this motion, thus giving a new expansion of these accounts. To promote this object, we intend to open accounts with individuals and corporations, receiving their deposits on running accounts, allowing interest on the same at the rate of 2 or  $2\frac{1}{2}$  per cent on such deposits, effecting at the same time their orders for the purchase or sale of bonds and stocks. The average rate of interest resulting from the employment of such capital will, perhaps, not be higher than that we pay, but we consider it the policy of an institution like ours, to promote the investment and circulation of idle capital.

The parties depositing their money with us are deriving an interest from it, and they can wait for a favorable chance to invest their capital, which we are likely to offer. We shall then have three different classes of customers: large capitalists associated with us, including the Trustees of our Company; our shareholders, and, finally, the holders of our bonds, and our creditors by running accounts.

Balance Sheet of December 31, 1854.

#### ASSETS.

| Invested in funds subject to fluctuation             |              |               |    |
|--|--------------|---------------|----|
| In French Government stocks, railroad shares, etc.,. |              | 4             |    |
| In bonds,  | 32,213,625 1 | 9             |    |
|  |              | - 57,460,092  | 94 |
| Loans and discounts,                                 |              | . 67,353,376  | 06 |
| Real estate and office furniture,                    |              | . 1,328,566   | 71 |
| Cash on hand and in banks,                           |              | . 7,149,813   | 05 |
| Total,   | Fcs          | . 133,291,848 | 76 |

The capital invested in shares was divided in shares of eighteen different industrial associations, all of them considered first class, and saleable in our market at any time. The money employed in bonds is distributed among twenty large establishments for public works.

Although the investment of money in stocks and bonds is both profitable and safe, still we considered it advisable to keep ourselves restricted within certain limits, to avoid any possible losses resulting from extraordinary fluctuations.

| The total purchases of government stocks, (rentes,) shares, and bonds, during the year 1853, amounted toFes.146,295,621 | 58 |
|---|----|
| During 1854 these purchases amounted only to 126,869,322 83   |    |
| Add the amount of such fund in our portefeuille,  |    |
| on Dec. 31, 1853 37,259,649 13  |    |

## CURRENCY IN THE DISTRICT OF COLUMBIA.

LAWS OF THE UNITED STATES-1854.

An Act to suppress the Circulation of Small Notes, as a Currency, in the District of Columbia.

BE it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That if any person or persons, body politic or corporate, within the District of Columbia, shall make, emit, issue, utter, sign, draw, or indorse any bank-note, promissory note, or any instrument of writing, for the payment or delivery of money, or other valuable thing, or of any thing purporting to be a valuable thing, of a less amount than five dollars, to be used as a paper currency, or as a circulating medium, either as money, or in lieu of money or of any other currency, every such person, and every member, officer, or agent of such body politic or corporate, concerned in or assenting to, such making, emitting, issuing, uttering, signing, drawing, or indorsing, as aforesaid, for any of the purposes aforesaid, shall forfeit and pay the sum of ten dollars for each and every such bank-note, promissory note, or instrument of writing so made, issued, emitted, signed, drawn, or indorsed, one half to the use. of any person who shall sue therefor, and the other half to the County of Washington, District of Columbia. And, on the trial of any such cause, if the promissory note, bank-note, or other instrument in question, be in part or in the whole printed or engraven, it shall be deemed sufficient evidence of an intention to put the same into circulation in violation of this act, unless the contrary be shown.

§ 2. And be it further enacted, That it shall be unlawful for any person or persons, body politic or corporate, to pass, or offer to pass, within the District of Columbia, any bank-note, promissory note, or any instrument in writing of a less denomination or amount than five dollars, either as money or in lieu of money, or of any other currency; and any other person or persons, and every member, officer, or agent of such body politic or corporate, violating the provisions of this section, shall forfeit and pay a sum of not less than five, nor more than ten dollars for every such offence, one half to the use of the person who shall sue therefor, and the other half to the use of the County of Washington District of Columbia

Washington, District of Columbia.

§ 3. And be it further enacted, That any person or persons, body politic or corporate, holding any such bank-note, promissory note, or instrument in writing, may present the same for payment to the person or persons, body politic or corporate, that made, emitted, issued, uttered, signed, drew, or indorsed the same; and if, upon such presentment, the person or persons, body politic or corporate, that made, emitted, issued, uttered, signed, drew, or indorsed the same, neglect or refuse to redeem the same in gold or silver, such parties so ne-

glecting or refusing, shall forfeit and pay the sum of twenty dollars for each and every such bank-note, promissory note, or instrument in writing so presented, and payment thereof neglected or refused, as aforesaid, to the use of the person or persons, body politic or corporate, holding and presenting the same as aforesaid.

§ 4. And be it further enacted, That each and every forfeiture, under the foregoing provisions of this act, shall be recovered in an action of debt, before any justice of the peace in the District of Columbia, in the name of any person who shall sue therefor, and jurisdiction is hereby expressly given to each and every justice of the peace in the District of Columbia to try and adjudicate each and every such case.

- § 5. And be it further enacted, That all contracts, whether written or verbal, hereafter made, to pay or deliver money or any valuable thing, or thing purporting to be a valuable thing, the consideration whereof may be, either wholly or in part, any paper currency or circulating medium under five dollars, or other paper or currency prohibited by this act, shall be deemed and held to be illegal and void; and the person or persons suing on such contract shall have no remedy in any court of law or equity; and, in any suit brought on such contract, it shall be competent for the defendant, under the general issue, or any appropriate special plea, to offer evidence of the nature or of the consideration of the contract so sued on: and, on the defendant's making oath that he or she has not evidence sufficient to prove the nature or consideration of such contract, it shall be the duty of the court before which such suit may be brought, to require the plaintiff or plaintiffs, or either or any of them, to be sworn to testify the truth in regard to the transaction; and if the plaintiff or plaintiffs shall not be present at the trial, to compel the attendance of such plaintiff or plaintiffs as a witness or witnesses, and to postpone or continue the cause till such attendance can be procured; and if, after the whole evidence shall have been heard, it shall appear that the consideration, either wholly or in part, of the contract was such paper currency or circulating medium prohibited by this act, judgment shall be rendered for the defendant or defendants, and for costs against the plaintiff or plaintiffs.
- § 6. And be it further enacted, That if any merchant, hotel-keeper, shop-keeper, grocer, commission merchant, or insurance agent, any owner or driver of a hackney-carriage, omnibus, cart, wagon, or dray, any huckster, butcher, auctioneer, livery-stable keeper, any owner or keeper of a billiard-table or ten-pin alley, any pawnbroker, any manager or agent of theatrical or other amusements, any hawker or peddler, transacting business under a license granted by the corporation of the city of Washington or Georgetown, in the District of Columbia, or any other person or persons transacting business under such license, shall either receive or pay out any paper under the denomination of five dollars, or any other paper not payable in specie on demand, so prohibited, as aforesaid, it shall be the duty of the United States for the District of Columbia to sue out process in the nature of a scire facias, or to institute other suitable proceedings in the Circuit Court of the District of Columbia, against such offender or offenders,

returnable to the said court immediately, if said court be then sitting, or to the next term of said court, if there be then a vacation of the terms of said court, requiring such offenders to show cause why his, her, or their license aforesaid, shall not be forfeited; and on proof exhibited to said court of such receiving or paying out of such prohibited paper as aforesaid, said court shall forfeit, annul, and vacate such license, and no other license for any purpose shall be granted to such offender or offenders until one year thereafter shall have passed and expired.

§ 7. And be it further enacted, That it shall be the duty of the Marshal of the District of Columbia, and of every constable of said district, to give information to some justice of the peace in said district, of every violation of this law which may come to his knowledge.

- § 8. And be it further enacted, That on the trial of any cause other than a criminal prosecution, under the provision of this act, it shall be lawful for the court before whom such cause is pending, to cause to be brought before said court, and examined as a witness, any defendant to any suit, his agent or employer, touching the matters and things in controversy, and to employ such process to effect the object aforesaid, as is usual in other cases.
- § 9. And be it further enacted, That this act shall be in force from and after the first day of November next; and that so much and such parts of all former acts as may be repugnant to this act be and the same are hereby repealed.

Approved, December 27, 1854.

## TREASURE TROVE IN MAINE.

THE following account of some ancient and curious gold and silver coins, and an ancient ring, found on Richmond's Island, near Portland, Maine, is condensed from a very interesting communication of the Hon. William Willis, to the Eastern Argus:

The discovery of a quantity of old gold coin on the 11th of May, at Richmond's Island, has created quite a sensation at this place and at Cape Elizabeth, and has revived the rumor of a former day, that large quantities of money lie buried in the soil of that and other islands in this neighborhood. This impression is not of recent date, nor confined to this region; for ever since the Buccaneers infested our coast 200 years ago, the impression has prevailed that they concealed their treasures upon our islands, where they have been repeatedly sought by visionary men. But the present case is no vision; a veritable collection of coin of an old date having been found, I was induced to make an investigation into the circumstances; and, accompanied by the Hon. C. S. Daveis, Dr. Gilman Daveis, and Dr. John Cummings, the owner of the island, we carefully examined the locality, and there found fragments of the pot in which the coin was buried, and other relics of a former age.

The oldest of the coin is silver, of the reign of Elizabeth; of this, there are 4 one shilling pieces, 16 sixpences, 1 great or four-penny piece, and 2½ groats. All these pieces, as was the case with the whole silver coinage of Elizabeth, bear the same effigy, title, and motto—they are as follows: On the face is the head of the Queen, crowned; the rose, an old emblem, behind it; around it her title, ELIZABETH. D.G. ANG: FR: ET HIB: REX: that is, Elizabeth by the grace of God, Queen of England, France, and Ireland. On the reverse, are the arms of England, France, and Ireland, quartered on a shield, traversed by a cross, around which is the motto POSVI, DEV:—ADIVTOREM, MEVM: Posui Deum Adjutorem meum—[I have made God my helper.] This motto was first adopted by Edward III., and continued to be used till the time of Charles I. On some of the coin the title and motto are abridged. The shillings have no date, but all the sixpences and some of the smaller pieces have the date of coinage over the shield, and on the present collection it extends from 1564, the 7th year of her reign, to 1593.

Of the reign of James I, there are four one shilling pieces and one sixpence; the shillings are not dated; the sixpence was dated 1606, the fourth year of his reign. The title, motto, and busts on the three pieces are the same; on the face is the head of the king crowned; back of it, on the shilling pieces, are the figures XII., on the sixpence VI., to indicate their current value; around on the outside of the head is the title, IACOBVS, D: G: MAG: BRI: FR: ET HIB: REX. Which is, Jacobus Dei gratia Magnæ Brittanæ, Franciæ et Hiberniæ Rex. James, by the grace of God, King of Great Britain, France, and Ireland. On the reverse is a plain shield without the cross, on which are quartered the arms of England, Scotland, France, and Ireland; around it the legend, or motto, "Quæ Deus Conjunxit, Nemo Separet," What God has joined let no man put asunder—referring to the union of the English and Scottish crowns.

Of the reign of Charles I. there are but one shilling, one sixpence. On their face they bear the impression of the king's bust crowned; behind the head, the figures indicating the value XII. on the shillings, VI. on the sixpence. The sixpence is dated 1625, the first year of the reign; the shilling has no date; for this singular fact, that in all cases in these three reigns, only the smaller pieces are dated, we can give no account. The title is, "Carolus D. G. Mag. Br. Fr. et Hi. Rex." Charles by the grace of God King of Great Britain, France, and Ireland. On the reverse are the union arms quartered as in the last reign, on the sixpence; but on the shilling the shield is traversed by the cross, its four arms extending to the circumference. The motto is, "Christo auspice regno"—I reign under the auspices of Christ.

The number of gold coins in the collection is 21, of which ten are sovereigns or units, of the reign of James I. of the value of 20s. each. Three are half-sovereigns, or double crowns, of the reign of James I. of the value of 10s. Seven are sovereigns of the reign of Charles I. And one Scottish coin of the last year of the reign of James VI. of Scotland, afterwards James I. of the United Realm. This is the

oldest in the collection of gold coins, is dated 1602, and of the size and value of the double crown. On one side of this piece are a sword and sceptre crossed at an acute angle; between the points at the top is a crown; opposite on the under part, between the handles, is the date, "1602." On each side is a thistle, the national emblem; the motto around these emblems is, SALVS POPVLI SVPREMA. LEX. The safety of the people the supreme law. On the other side is a lion rampant on a shield crowned, a rose over the crown, and around the title, IACOBVS. 6, D.G.R. SCOTTORVM. James VI. by the grace of God, King of the Scots. This is in fine preservation, and a beautiful coin.

The sovereigns and crowns are subsequent to his accession to the English throne; two of them are of the description which the king denominated Units, from their being the first issued under the United crowns. On their face they represent the king in armor, crowned and holding the globe and sceptre, around which is the title, "Jacobus D. G. Mag. Brit. Fran. et Hi. Rex." On the reverse is a shield with the arms of England, France, Scotland, and Ireland quartered, surmounted by a crown: on one side of the shield is the letter I, on the other R, which I suppose stands for "James Rex." The motto is "Faciam eos in Gentem Unam." I will make them one nation; hence the name units or united. The mint stamp is an escallop shell, indicating its coinage to be prior to June, 1607. The other eight of the sovereigns or units are a later coinage, having the king's head crowned with laurels in the Roman style, for the first time on English coins; they have the same title and motto as those last described. Behind the head are figures XX, designating their value, 20s. These were called laurels from the laurel wreath on the head.

The crowns have an impression similar to that on the sovereigns first described, except that the motto on the reverse is different, that is, "Henricus rosas Regna Jacobus," the meaning of which I do not find explained. Henry, the eldest son of the king, a prince of great promise, died in 1612, in the nineteenth year of his age, much lamented by the nation; whether the coin has any and what connection with him, I have no means of determining. These have also the letters I. R. on the sides of the shield. The last of the series of gold coin are seven of the reign of Charles I., all of the denomination of sovereigns or units, and of the same coinage. They represent the head of the king crowned and youthful, with a double ruff round his neck and a robe over his shoulders; the figure XX behind his head, and the title, "Carolus D. G. Mag. Br. Fr. et Hib. rex." On the reverse a new motto is introduced, "Florent Concordia Regna"-Nations flourish by peace: in the centre, the national arms quartered as usual on a shield surmounted by a crown. None of the gold coins have dates, and all, both silver and gold, are much thinner and broader than modern coin of similar value. The impressions are clear and distinct, especially upon the gold, which are less worn than the silver, and nearly as bright as when issued.

The ring is a wedding signet-ring of fine gold, weighing 8 penny-

weights 4 grains. The signet is oval, 6-8 of an inch by 5-8 in size. On the outer side of the surface is an ornamented border, in the centre the letters G. V., a cord passes between the initials, with a tie at the top, and a love-knot at the bottom. Inside are engraved the words "United," then the figure of two united hearts, "Death only partes." The workmanship is remarkably good, the letters well formed and sharply cut. The initials probably represent the parties whose hearts are united on the ring, but who they were, we are wholly at a loss even for a conjecture.

The coin and ring were found in a stone pot of common manufacture, and a beautiful globular shape, resembling a globe lantern, and would probably contain a quart. The pot was about a foot under the surface, on a slope of land gradually descending from the summit in the centre of the island, northwesterly to the shore. There are traces of the foundation of buildings about the place; stones from the beach were turned up in ploughing; in one place, apparently are the foundations of a chimney, and near was a cavity which had probably been a cellar. The place has not been ploughed within the memory of the present generation, if it ever had, until it was broken up last year. The whole number of gold pieces was 21, of silver of various sizes, 31. Total standard value, \$100. The silver was considerably discolored, the gold very little. Mr. Willis thinks that the deposit of the coin and ring is connected with the fate of Walter Bagnall, who was the first settler of Richmond's Island, and was killed by the Indians October 3d, 1631.

In 1632, an expedition, fitted out at Boston and Piscataqua, to pursue Dixy Bull, a pirate who had ravaged Pemaquid and plundered vessels, on their return stopped at Richmond's Island, and hung Black Will, an Indian, who had been concerned in the murder of Bagnall. Mr. Willis's solution is, that this coin was Bagnall's, and was concealed by his servant, or by some of the Indians, perhaps by Black Will, and has lain there ever since. In regard to the ring, it probably had no connection with any of these parties, but may have been received by Bagnall from some of the rovers on the coast or other person who came dishonestly by it, and placed by him with his other treasures.

STIMPSON'S CHECKS. — Mr. George Stimpson, Jr., recently advanced to the responsible position of Paying Teller in the Merchants' Bank of Boston, has contrived several ingenious arrangements for promoting convenience and safety in the transaction of business. Among these are his "safety seal checks" which ought to come into general use. If it were only to experience the luxury of filling a handsome blank while making out a check for the payment of money, it would be worth while to have one of Stimpson's check-books; in addition to which the convenience to the bank officers, and the security against forgery or alterations are very considerable advantages. These checks are now prepared for all the banks very neatly printed, at the Franklin printing-house, and may be procured at 92 Washington street, or of the leading stationers of Boston.

## PRINCIPLES OF LIFE INSURANCE.

I. Mortality at the North and South. II. Life Insurance compared with Savings Banks. III. Forfeiture of Policy by delay in Payment of Premium. IV. Necessity of strict observance of Life Insurance Contract.

I. Mortality at the North and at the South.—The experience of the Life Insurance Companies of this country has brought to light certain facts which are not expressed or indicated by the Census Returns. In reference to the North, or that portion of the Union embraced northerly of the southern line of Virginia and Kentucky, it is shown that the mortality is considerably less than that indicated by the celebrated Carlisle tables. From ten years' practical results, it appears that the mortality among that class of persons who insure their lives within the region named, is less than one per cent, namely, about 94 in every 10,000.

In that section comprised between the 32d degree of north latitude (a few miles distant from Savannah) and the southern line of Virginia and Kentucky, the mortality among the same class of people is 1.17½

per cent, or 1171 persons out of every 10,000.

Looking to the extreme Southern States, or south of latitude 32 deg., the mortality is nearly double that of the Northern section—the actual number of deaths out of 10,000 (as insured) being 186. These calculations are entirely exclusive of the year 1854, which has, perhaps, been more fatal in the South than any period since 1830.

This is the experience of the Mutual Life Insurance Company of this city, whose large business for years past now enables them to form some reliable tables to govern their future rates of premium.

Their actuary reports that,

"The disparity in the ratio of the amount of claims from death to the amount at risk in these three sections of country, has usually been even greater than that of the simple mortality in them. Thus, during the first six months of the present fiscal year, (from 1st February to 1st August,) the Company has had at risk in the first section \$18,000,000, while the amount of claims in the section has been \$68,500, or \$38 out of every \$10,000 assured. In the second section the amount at risk is \$1,500,000, and the amount of claims during the same time has been \$20,000, or \$133 out of every \$10,000 assured. In the third section the amount at risk is \$1,634,000, while the amount of claims during the same time is \$42,800, or \$262 out of every \$10,000 assured."

This increased mortality at the South has, of course, compelled the Company to advance their rates of premium on lives insured there. The usual rate of additional premium for persons at the South, has been heretofore one per cent. This, it is now shown, is not enough to cover the actual risk; the Company will therefore advance the pre-

mium to two per cent beyond the ordinary rate of persons in Northern latitudes.

II. LIFE INSURANCE COMPARED WITH SAVINGS BANKS.—We have always strongly urged the utility of life insurance among all classes. Its principles should be firmly impressed upon the community. So with Savings Banks; they are among the most praiseworthy institutions of the age—their effect upon the people is a most important one, independently of the mere consideration of dollars and cents. Their influence upon the habits of the people is most salutary and durable; but we look upon the practice of life insurance as equally claiming attention.

In a pecuniary point of view, and with a view to the comfort of those who succeed us, the latter has superior claims. Life insurance should be attended to first, and the savings bank next. The following table demonstrates the pecuniary advantage of each, namely, a deposit of \$1000 in a savings bank or a policy of life insurance for the same amount, for a series of years. If deposited or insured at the age of 25, his heirs will receive,

| If he die at<br>the age of | From the<br>Savings Bank. | From the Life<br>Insurance (o. |
|----------------------------|---------------------------|--------------------------------|
| 30,                        | \$1280                    | \$3425                         |

| 62                      | 3437                      | 3536                           |

III. FORFEITURE OF POLICY BY DELAY IN PAYMENT OF PREMIUMS.—Under the head of "Legal Decisions," our city journals published, a few months since, an opinion and decision of the Supreme Court, in the case of Buckbee vs. The United States Insurance, Annuity, and Trust Company of Philadelphia.

In this instance, the plaintiff had actually paid the premium on the policy, but not until six days after it was due. The premium was received by the Company, although past due, without proper inquiry into the health of the party insured; and it was afterwards shown that at the time the premium became due, he was in failing health. The Company had therefore made a new contract, by the reception of the premium at a day when it could not have been received upon the old contract; and in thus acknowledging the payment of the premium, without the usual inquiry or certificate of health, they could not legally or equitably deny their liability. The party insured died a few weeks after the premium was so paid.

From the facts given by Judge Clerke, who pronounced the deci-

sion, we do not doubt this case was settled justly, as the Company had consented to receive the premium, although it was past due, as they had done in various instances, and without asking any question as to the state of health of the party whose life they were continuing to insure. No allegation of deception is made by the Company; the only charge being that a voluntary disclosure was not made at the time, by the plaintiff, of the then feeble state of her husband's health. If such were the facts, we do not see how a different result could have been properly reached by the court and jury. Yet one portion of the learned court's opinion excited our unqualified surprise. They state that "a very great latitude" as to the time of payment was permitted by defendants, and that "this is the very common, perhaps the most usual practice in insurance companies," and "that the premium is never expected upon the precise day on which it falls due."

Now this may be true of Philadelphia life insurance companies, though we shall be slow to believe it; but that it is the reverse of true as to the life insurance companies of this city, of good standing, we have no doubt.

On inquiry as to the custom in this city, at the leading offices, we were shown their policies, which expressly state that "if the party shall not pay the said premium on or before the day mentioned for the payment thereof, then in every such case the said Company shall not be liable to the payment of the sum insured, or any part thereof, and this policy shall cease and determine." It also declares that "if at any time premiums are received after due, on being satisfied of the health of the party insured, it is considered by both the assured and the Company as an act of grace or courtesy on the part of the latter, and as forming no precedent in regard to future payments of premiums on said policy, and is in no case to be considered a precedent or a waiver of the forfeiture of the policy, according to the conditions expressed therein, if any future payment of premiums be omitted on the day it is fully due."

So careful are this Company to carry out to the letter this agreement, that they do not permit a premium to be received when even one day only has passed after it has become due, without being satisfied as to the state of health of the party, and if satisfied in all respects, then to consent to the renewal of a contract which had already become void by non-fulfillment. We cannot doubt that this is the usage of all the really sound companies in this city, as any other course would open the door to evils of such magnitude as no prudent company would expose themselves to.

IV. NECESSITY OF STRICT OBSERVANCE OF LIFE INSURANCE CONTRACT.—Now, if one party to the contract is not bound by its stipulations, the other is not, as a matter of course, and the consequence is that there is no binding agreements for insurance at all. To show the learned judge (who travelled out of the record to pronounce what was usage of insurance companies generally) the consequence of a loose legal opinion, we will state a case which took place the day after his decision was published in this city. A gentleman on Staten Island

had a policy on his life for the benefit of his wife, the premium of which was due in May last, but was not paid. Since that period he has lost his health, and is now in a decline, and his prudent wife, on seeing this very liberal decision as to the rights of policy holders, from general usage to pay their premiums after they were due, sent her son, with a lawyer, to make a legal tender to the Company of a premium actually due seven months before! As the parties claim rights under Judge Clerke's opinion, the Supreme Court may yet have this case for their decision also.

We think it due to so important an interest as life insurance has become in this country, and not only to the respectable corporations who are engaged in it, but to the tens of thousands who are receiving or expecting to receive benefits from it, that no crude and loose opinions should be promulgated by our courts in regard to its usages or liabilities.

In Great Britain, its parliament and its courts of law protect and foster to the extent of their power this most important interest, deeming that they are thus guarding and promoting the happiness and welfare of those who most need protection. It is a matter not less of surprise than regret that so little should be thought or known of it in this country, where, of all places in the world, it should be most cherished. Mutations of fortune and condition are more frequent here than elsewhere, and the family reared among us in luxury, and afterwards impoverished in circumstances and then desolated by the death of its protector, is poor indeed if no provision has been made for its members by life insurance. As public journalists, we take a deep interest in what concerns the public, and think we are not travelling out of our legitimate sphere in advising the insurance companies to mend their loose usages, if Judge Clerke's opinion is well founded; or in case the learned judge is at fault in his decision on this point, that he should not again venture upon the subject of the usage of life insurance companies until he is satisfied that he is strictly and technically correct. In our No. for June, 1855, we submitted to the view of our readers a summary of the life insurance reports for the present year. We now give, from another source, a tabular view of these returns, including some companies omitted in the former table, from which our readers will perceive how important the life insurance interests are becoming in this State; and that the subject is deriving increased attention throughout the United States. In this connection it may be proper to say that steps have been taken to procure and publish copious information in reference to the mortality of the South as compared with that of the Northern and Middle States. from which our insurance companies will be enabled to deduce more correct theories as to longevity in the several States.

## LEGAL MISCELLA'NY.

DECISIONS IN THE NEW-YORK COURT OF APPEALS AND IN THE SUPREME COURTS OF PENNSYLVANIA, MAINE, AND GEORGIA.

I. Banks. II. Bills of Exchange and Promissory Notes. III. Insurance. IV. Interest. V. Partnership. VI. Stockholders.

## NEW-YORK COURT OF APPEALS.—I. BANKS.

1. In a suit against a bank for money deposited with it by the plaintiff, the defendant produced a check upon the bank, which it had paid for the amount of the money, signed by the plaintiff and payable to the order of Corlies & Co., and with the name of this firm written upon it; it was proved that this was not the indorsement of the firm, and that it never owned or had any interest in the check. Held, that the plaintiff was entitled to recover. (Kernan's Reports of Cases in

Court of Appeals, Vol. 1, p. 404.)

Johnson, J. The bank had received from the plaintiff deposits of cash amounting to \$716.92, and was consequently indebted to him in that amount. In an action for this sum they claimed, by way of defence, to have paid the amount by the plaintiff's order. This defence they failed to prove upon the trial. They proved an order by the plaintiff to pay the money to G. W. Corlies & Co., or their order, and the payment of the money thereupon to some body, but did not prove that the money was paid to G. W. Corlies & Co., or their order. On the contrary, the plaintiff proved that the indorsement of the checks with the name of G. W. Corlies & Co., were forgeries. Upon these facts, the plaintiff was entitled to recover. The money had not been paid to, and according to, the plaintiff's order. (Cogill v. American Exchange Bank, 1 Comstock, 113; Weisser v. Denison, Court of Appeals, March Term, 1854.) The judgment should be affirmed. Judgment affirmed. (Ibid.)

## II. BILLS OF EXCHANGE AND PROMISSORY NOTES.

1. An officer of a corporation, to whose order, as such, a note executed to it is payable, and who indorses the note, adding to his name his official character, and negotiates it on behalf of the corporation, is not personally responsible as indorser. (Babcock v. Beman, Ibid., 200.)

2. The effect of such indorsement is merely to transfer the paper.

(Ibid.)

3. Where the note was payable to the order of "R. Beman, Treas.," and he being the treasurer of a corporation, with authority as such to receive and transfer the note, indorsed it, "R. Beman, Treas.," and delivered it to the plaintiff, who received it on account of a debt due them from the corporation, with notice of the capacity in which Beman acted. *Held*, that he was not individually liable as an indorser of the note. (*Ibid.*)

4. A bank receiving, and upon good consideration, assuming the collection of a bill or note, is liable for any default of its agents or correspondents in collecting or paying over the proceeds, or in charging the parties thereto, unless there be an agreement to the contrary. (Commercial Bank of Pennsylvania v. Union Bank of New-York. Ibid., 203.)

5. A bank to which a bill is indorsed and transmitted by the owner for collection, and which has a special interest in the draft and proceeds, can sustain an action against an agent employed by it to collect the same, for default in paying over the proceeds or in charging the

parties. (Ibid.)

6. It is sufficient that the draft was indorsed to such bank, and it agreed with the owner to collect it, to enable it to sustain the action against an agent employed by it to collect the same. Per Allen, J.

(Ibid.)

- 7. Where the Bank of Wilmington was the owner of a bill of exchange payable at sight at Troy, and indorsed and transmitted it to the plaintiff, under an arrangement by which the latter collected and retained the proceeds of paper thus remitted to it, and with the same redeemed the circulating notes of, and paid drafts drawn by, the Bank of Wilmington; and the plaintiff indorsed and transmitted the bill to the defendant, its correspondent in New-York, for collection, and the same was by the latter sent to the Troy City Bank for the same purpose. Held, that the plaintiff could recover of the defendant the amount of the bill if collected by the Troy City Bank, or if the same was lost by the omission of the latter to charge the drawer and indorsers. (Ibid.)
- 8. The bill was received by the Troy City Bank on Friday morning, the 19th of November, and was then presented to the drawee, and delivered to him on receiving his check on that Bank for an amount exceeding the bill, and the difference between the check and the bill was paid him. The drawee had not funds in the bank to the amount of the draft when it was delivered to him and his check received, but on the evening of the same day he made his account good to the amount of this and other checks drawn during the day, by cash and sight-drafts on New-York. On the 20th, he drew checks on the Bank which were paid to a large amount, and made his account good in the evening by cash and drafts on New-York. These drafts were never paid, and amounted to more than the bill. On Monday, the 22d, the Troy City Bank procured the bill from the drawee, and demanded payment of the same, protested it for non-payment, and served notice of non-payment on the drawer and indorsers. Held, that the defendant was liable for the amount of the bill; that if it was not paid, there was an omission to charge the drawer and indorser. (Ibid.)
- 9. A note delivered by the maker, without consideration therefor, to a third person, to enable the latter to raise money thereon for the maker or himself, has no legal inception in his hands. If he negotiate the note upon usurious consideration, it is void. (Catline v. Gunter, Ibid., 868.)

### III. INSURANCE.

1. In cases of insurance, the law, in the absence of fraud, looks to the proximate cause only of the loss in determining whether it was caused by a peril insured against. (Matthews v. Howard Insurance Company, 9.)

2. A collision is a peril within a policy insuring against the perils

of the sea or lakes. (Ibid.)

3. Where the immediate cause of loss to a vessel is a peril expressly insured against, it is not a defence that the negligence of the master and crew occasioned such peril, or brought her within it. (*Ibid.*)

4. Under a policy of insurance against the usual perils of the sea or lakes, the underwriters do not insure against the negligence of the master and marines as a distinct cause of loss—they are not

liable. (Ibid.)

5. Where a collision happened between the insured vessel and another, by which the latter sustained damages, and her owners filed a libel against the insured vessel, alleging that the collision was occasioned by the negligence of her master and crew, and after interposition of claim and defence, by her owners, and notice to the insurers of the proceedings, she was condemned and ordered to be sold to pay such damages. *Held*, that the underwriters were not liable to the owners of the insured vessel for the amount of such damages, which they were compelled to pay to prevent her being sold. (*Ibid.*)

6. A policy by which property was insured against loss or damage by fire, contained a condition that the insurer would not be liable for any loss occasioned by the explosion of a steam-boiler; and there was an explosion of a steam-boiler in use in the building where the property was situated, whereby fire was brought in contact with and consumed the property. Held, that the loss was within the exception created by the condition, and the insurer not liable. (St. John v. The Ameri-

can Mutual and Fire Insurance Company, 516.)

7. A policy of insurance against loss by fire, which describes the subject matter as a barque on the stocks near a ship in a shipyard, being built for Howes, Godfrey & Co., does not cover timbers not united to the keel or structure thereon of the contemplated barque, although they are intended and completely prepared to be used in its framework, are lying in the yard in the proper place to be conveniently applied to that use, and are valueless for any other vessel. (Hood v. The Manhattan Fire Insurance Company, 532.)

8. Such a policy covers the structure made from time to time on the stocks, which, when completed, will constitute the barque. (*Ibid.*)

9. A condition in a policy of insurance upon a building, which prohibits its being appropriated, applied, or used for the purpose of storing or keeping therein certain articles denominated hazardous, is not violated by a mere temporary or casual deposit of such articles in the building. (Hynds v. The Schenectady County Mutual Insurance Company, 554.)

10. But if the building or any part thereof is used for the purpose

either of storing or of keeping therein prohibited articles, it is a violation of the condition. (Ibid.)

### IV. INTEREST.

1. A sum of money, payable by an instrument in which interest is not mentioned, and which does not specify any time of payment, or that the money is payable on demand, draws interest from the date of the instrument. (Purdy v. Phillips, 406.)

2. A note, delivered by the maker, without consideration therefor, to a third person, to enable the latter to raise money thereon for the maker or himself, has no legal inception in his hands. If he negotiate the note upon an usurious consideration, it is void. (Catiline v. Gun-

ter, 406.)

3. Where there was no direct evidence that an usurious agreement was made at the time of the loan, but it was proved that twenty-two days thereafter the borrower paid and the lender received for the use of the money, from the time of the loan to that day, a sum equal to interest at the rate of much more than seven per cent per annum. Held, that it was a question for the jury whether or not the loan was made upon an usurious agreement. (Ibid.)

## V. PARTNERSHIP.

1. Where a limited partnership is dissolved by the agreement of the parties before the period fixed for its termination by the original certificate, it continues as to persons crediting the firm without actual notice of such dissolution, until the notice required by the statute has been filed, recorded, and published for four weeks, as therein prescribed. (Beers v. Reynolds & Maginnis, Ibid., 97.)

2. If any alteration be made in the capital or shares, and the partnership be in any manner thereafter carried on, before the publication of the notice is completed, the special partner becomes liable as a

general partner. (Ibid.)

3. Where parties to a limited partnership agreed to dissolve it, and caused notice of such dissolution to be filed and recorded, commenced its publication, and the special partner, at the same time sold his interest in the co-partnership effects to the general partner, who secured the price by mortgage on the effects and other property, and a judgment, and continued the same kind of business, and afterwards, and before the publication of the notice was completed, purchased goods of the plaintiff, who had no actual notice of the dissolution. Held, that the special partner was liable to the plaintiff as a general partner, without reference to the intent with which the dissolution took place, and the mortgage and judgment were taken. (Ibid.)

### VI. STOCKHOLDERS.

1. The owners of stock are "the persons composing the company," within the 7th section of the act of 1811, relative to incorporations for manufacturing purposes. (Rosevelt v. Brown, Ibid., 148.)

2. A person to whom stock is transferred on the books of the company, and who upon such books appears to be the legal owner, is liable to creditors under the 7th section of the act, though it was transferred to, and held by, him as collateral security for a debt. (Ibid.)

3. Where D., the owner of stock in a company incorporated under the act of 1811, agreed with a firm to transfer it to B., one of its members, as collateral security for its indebtedness to the firm, and that the latter might sell sufficient of the stock to pay such indebtedness, on a specified contingency; and D., in performance of the agreement, transferred the stock to B. on the books of the company absolutely, and it was so held by him when the company was dissolved. Held, that B. was individually responsible to a creditor of the company to the amount of the stock. (Ibid.)

## SUPREME COURT OF PENNSYLVANIA.

I. Banks. II. Promissory Notes and Bills of Exchange. III. Collateral Securities.

## I. BANKS.

1. Assuming an act of incorporation of a bank to be a contract between the State and the stockholders, the construction of such a contract is strict against the corporation and liberal in favor of the State. (Bank of Pennsylvania v. The Commonwealth, Harris' Reports, Vol. xix., 144.)

2. A bank acquires no privilege, exemption, or immunity under its charter, except what are given expressly and unequivocally. Corpo-

rate privileges are never implied. (*Ibid.*)

3. The Legislature can only disarm the State of any portion of the sovereignty which belongs to her, by words showing that to be the intention, in words so plain that they cannot be misunderstood. (Ibid.)

4. The taxing power is an incident of the State's sovereignty, and the State does not lose it by a charter which says nothing on the sub-

ject. (*Ibid*.)

5. The principle laid down in Easton Bank v. Commonwealth, (10

Barr, 442,) reäffirmed. (Ibid.)

6. The court, in construing an act of incorporation, will not look to what occurred when it was on its passage through the Legislature. Such evidence is not only valueless, but delusive and dangerous. (Ibid.)

7. Stock belonging to the United States Bank in a navigation company, was levied on under execution against the Bank, and was purchased by the plaintiff in trust for the Bank, and was, within six years thereafter, sold by the Bank to another person, to whom it was transferred on the books of the navigation company. It was held, that the lapse of time, the insolvency of the Bank, the embarrassments of the navigation company, and the inaction of the Bank in exercising con-

trol over or asserting claim to other stocks sold at the same sale, and purchased also by the plaintiff, were insufficient to raise any presumption of abandonment, or of a waiver of the right of the Bank to the navigation stock. (Henphill v. The Monongahela Navigation Company, Ibid., 351.)

## II. PROMISSORY NOTES AND BILLS OF EXCHANGE.

1. Though an alteration of a promissory note which does not disturb its legal effect does not avoid it, yet in a suit by the payee against a surety in a note under seal, it was held, that the alteration of the date of the note from 1836 to 1838, made at the request of the payee in the presence of the surety, but without his assent, avoided the note

as to the surety. (Miller v. Gilleland, 119.)

- 2. In a suit on a note, the pleas being nil debt, set off, etc., it was held not to be competent for the defendant, one of the makers of the note, to prove, by one who was a partner with him in a contract for the erection of a building for one of the plaintiffs and another, (the witness having assigned and released to the defendant his interest in the contract,) that it was agreed by the defendant and the plaintiff at the time the note was given, that with the consent of the witness it was to be applied to the building contract. The witness, though not a party to the record, was a party to the contract, and was incompetent. Whether the assignment was real or fictitious, he was incompetent; and the fact that the evidence was offered under the plea of set off did not vary the case. (Graves v. Griffin, 176.)
- not vary the case. (Graves v. Griffin, 176.)

  3. The holder of a note apparently altered must prove that the alteration was lawfully made before he can recover. (Paine v. Edsell, 178.)
- 4. A notice of non-payment sent to the indorser, inclosed under scal and delivered by the messenger to one in the employment of the indorser, with directions not to open it, is insufficient. (*Ibid.*)
- 5. The sufficiency of a notice sent by a third person, depends on what the messenger did, not on what he was instructed to do by the holder of the note; on the message that was delivered, not on that which was sent. (*Ibid.*)
- 6. The payee of a promissory note who has passed it away, is not a competent witness for a subsequent holder, in an action against the maker. (Bailey v. Knapp, 192.)
- 7. The rule established in *Post* v. Avery, (5 Watts & Sergeant, 509,) reaffirmed. (*I bid.*)
- 8. That rule applies equally to the exclusion of one who has transferred a chose in action, whether by delivery, indorsement, or assignment. (*Ibid.*)
- 9. A bill of exchange, accepted by the defendant in the suit for the accommodation of the drawer, and subsequently by the plaintiffs for the same purpose, was discounted at the instance of the drawer, and, not being paid by him, was taken up by the plaintiffs, due notice being given to the defendant as first indorser. Subsequently, in order to reimburse the amount paid by the plaintiffs, a note drawn by

the plaintiffs was indorsed by the defendant, was discounted by a bank, and its proceeds remitted to the plaintiffs, and the amount was credited by their clerk on their books to the bill, on the account of the drawer of it. The note was taken up by the drawer. The act of the clerk was disaffirmed by the plaintiffs on discovering the entry in their books.

It was held, that the discount of the note to raise money to take up the bill of exchange, and the receipt by the plaintiffs of the amount of the note, was not an extinguishment of the liability of the defendant as first indorser of the bill of exchange, the note not being paid by him, but taken up by the plaintiffs, there being no evidence of an intention on the part of the plaintiffs to receive the note or its proceeds in satisfaction of the bill. (Olemphant v. Church & Carothers, Ibid., 318.)

10. An indorsement of negotiable paper is not regarded in law as a written contract to pay on condition that the usual demand be made and notice given; but from it is implied a contract to pay on such condition, and such implication is liable to be changed by the exhibition of circumstances inconsistent with it, whether shown orally or in writing. The duty of demand and notice is not a part of the contract, but is merely a step in the remedy which may be waived by the indorser. (Barclay v. Weaver, 396.)

11. The holder may prove by oral testimony that at the time of the indorsement of a negotiable note, it was agreed between the maker, indorser, and holder, that payment should not be demanded at the maturity of the note, nor for two or three months afterwards. (*Ibid.*)

12. The 7th and 8th sections of the act of 5th April, 1849, in reference to notice to parties to promissory notes, are not applicable to notes due before the passage of the act. (Ibid.)

13. The maker of an accommodation note cannot set up the want of consideration as a defence against it in the hands of a third person, though it be there merely as a collateral security for the debt of the payee. (Lord v. The Ocean Bank, Harris' Reports xx., 384.)

14. The fact that the holder had other collateral securities for the same debt more than sufficient to cover it, from which, however, the debt had not been realized, is not a ground of defence on the part of the maker. (*Ibid.*)

15. A negotiable note, drawn by a citizen of Massachusetts after the passage of a Bankrupt Act in that State, was payable to the order of a citizen of New-York; and, before the application of the maker for discharge as a bankrupt, had been indorsed by the payee, without recourse to one who was a citizen of Massachusetts at the time of the application of the maker for a discharge, and of his discharge as a bankrupt under the Massachusetts act; in a suit by the indorsee against the maker, it was held, that the maker was discharged from liability to the indorsee. (Wheelock v. Leonard, 440.)

16. What would have been the result if the payee were bound to the holder, not decided. (Ibid.)

17. The indorser being also the payee of a negotiable note trans-

ferred before it became due, no evidence of irregularity in the transfer having been given aliunde, is not a competent witness for the maker, in an action against the maker by the indorsee, to prove that the note had not been negotiated in the regular course of business, that it was without consideration as between the maker and the payee, and that the indorsee knew it when he took the note. The rule in Walton v. Shelley reäffirmed. (Harding v. Mott, 469.)

18. The holder of a note received as collateral security is bound to employ reasonable diligence in its collection, and a conversion of it into a less security is such misuse of it as makes him responsible to the original debtor. (Muirhead v. Kilpatrick, 237, Harris' Reports,

Vol. xxi., 237.)

19. In an action on one of two notes which have been taken by the holder in lieu of a former note held by him, and which first note was alleged by the defendant to have been transferred to the plaintiff as a collateral security, an indorser of such original note is a competent witness for the plaintiff to prove that said original note was not received by the plaintiff as a collateral security, but had been transferred to him in payment of existing liabilities; the said indorser having been discharged by reason of an extension of time having been allowed in receiving the two notes and by the omission in the note in suit of one of the parties to the original note. (Ibid.)

20. Whether there was any new consideration for the execution of the note in suit, was a question of fact for the jury, and an instruction calculated to mislead them as to its determination, was error.

(Ibid.)

21. The extension of the time of payment of a note is a valuable consideration for other notes taken in lieu of it; the compromise of a doubtful claim is also a sufficient consideration to support a promise.

(Ibid.)

22. The release of one of the drawers of a former note, and of the indorsers thereon in the taking of a new note, and, if the note were received by the plaintiff from the said indorsers as a collateral security, the assuming of the obligation to account to them for it, was a yielding of advantages and a submission to inconvenience by the plaintiff which formed a sufficient consideration to support an action against the drawer of the new note. (*Ibid.*)

23. If a new note taken in lieu of another was founded on a valuable consideration independent of that on which the original note was founded, the failure of the consideration of the former note is not a defence by the drawer in a suit against him on the last note.

(Ibid.)

24. The decision (see 4 Harris 117, No. 4) in favor of the competency of the party omitted as a drawer taking the last note,

reäffirmed. (Ibid.)

25. If a creditor, knowing that a debtor is in failing circumstances, gets from him, for part of his claim, a mortgage substantially covering all his property, and gets the debtor to obtain the indorsement of another person for another part of it, without revealing the fact of the

mortgage, this is a fraud upon the indorser and discharges him from liability. (Lancaster County Bank v. Albright, Ibid., 228.)

26. The giving notice to indorsers is the official duty of a notary; and, when da'v certified and not contradicted or questioned, the presumption is that it was given according to law. (Kase v. Getchell,

Ibid., 503.)

27. In the case of a negotiable note payable at the Lebanon Bank in this State, the notary certified that he exhibited at said Bank the original note, etc., and "demanding payment, received for answer that no provision was made there for the payment thereof, of which I gave notice in writing to the indorsers of said note," in absence of other evidence as to the character of the notice, it was *Held*, that the certificate was primâ facie evidence that personal notice was given, though in fact the indorser sued lived in Danville, Montour county, in this State. (Ibid.)

#### III. COLLATERAL SECURITIES.

The opinion of the court was delivered by Black, C. J. The agent of the Bank of the United States deposited with the Messrs. Denison & Company, of London, certain American State stocks, amounting in the whole to the sum of \$4,450,000, to be held in trust as collateral security for the re-payment of £800,000, which it was intended to raise upon the post-notes of the Bank. The notes were issued, and this suit is brought on one of them. It is not denied that the Bank is primâ facie responsible by virtue of the note. It is not alleged that the plaintiff received any thing from Denison & Company out of the collaterals except what he has credited. But it is asserted by the Bank that the plaintiff is bound to look to the collaterals first, and to account for them to the defendant before he can recover the note. (Geo. Peabody v. Bank United States, Harris' Reports, Vol. xx., p. 451.)

When collaterals are placed in the hands of the creditor himself, and they are lost by his negligence, the debt is extinguished, (12 S. and R., 67.) When he converts them to his own use, as he is always presumed to have done when he refuses, without reason, to furnish an account of them, he is chargeable with their full value, (9 Barr, 28.) But this does not touch the present case. The question here is whether the creditor is required to account in an action on the main security for collaterals which were never in his hands or under his dominion, which, therefore, could not have been lost by his default, and from which he never did in fact realize any thing. It is not possible to doubt that under these circumstances he may recover against the defendant just as if the transaction with Denison & Company had never been. Even where collateral securities are placed in the custody of the creditor, if he has been guilty of no negligence, has realized nothing from them, and has never withheld information concerning them when requested to furnish it, he is entitled to judgment against the principal debtor. This was decided very lately in Lord v. The Ocean Bank, 8 Harris, 384. A fortiori there may be such a

recovery when they are placed by the debtor in the hands of a third person who is a trustee appointed by himself.

The State stocks were given to Denison & Company for the purpose of obtaining for the post-notes credit which otherwise they could not have got. But, though the holders of the notes may have trusted the Bank partly on the faith of the stocks, there is no stipulation which makes them the exclusive fund from which payment is to be made. The notes are a promise by the Bank to pay a certain sum of money at a certain time and place. The promise has been broken; a right of action has accrued; and it cannot be defeated by an arrangement between the debtor and her London bankers which resulted in no benefit to the creditor.

Judgment affirmed. (Ibid.)

## IV. Notice of Protest.

Bechtel v. Miners' Bank of Pottsville. Where a promissory note is made payable at a bank, no formal demand of payment is necessary; and, consequently, a notice simply stating the fact of the non-payment of the note is sufficient to charge the indorser. Error to Common Pleas of Schuylkill county. The opinion of the court was delivered by Knox, J. This is an action of assumpsit brought against the plaintiff in error as indorser of a promissory note made by Holmes, Meyers & Company, for \$600, payable at the Miners' Bank of Pottsville.

To fix the defendant's liability as indorser, the plaintiff below, after giving in evidence the note and indorsement, read the certificate of John Clayton, notary public, certifying that, on the 22d day of February, A.D. 1847, at the request of the Bank, he presented the original note (of which he gives a copy) to the Cashier of the Bank, and demanded payment, but received for answer that the drawers had no funds in Bank to pay said note, whereupon, (says the notary,) "I duly notified the indorsers of the non-payment thereof."

Upon the trial in the Common Pleas, the defendant averred that the notice of non-payment was insufficient to charge him as indorser, as it contained no allegation that demand of payment had been made upon the maker. The learned judge who presided at the trial instructed the jury that the notice was sufficient, and under his direction, a verdict was rendered for the plaintiff. This instruction is assigned for error.

It is well settled, both by English and American cases, that the notice must state, either expressly or by intendment, that the note or bill had been duly presented and payment demanded, as well as the fact of non-payment; but it is equally well settled, that where a note is payable at a bank on a day certain, and the holder of the note is present at the bank on the day ready to receive payment, no further demand is necessary to charge the indorser. (Rahm v. Philadelphia Bank, 1 Rawle., 335; Jenks v. Doylestown Bank, 4 W. & S., 505; Bank of United States v. Carneal, 2 Peters, 543,) where it is said that it is the duty of the

maker "to go to the bank within the usual hours and pay the note, and if he fail to do so the note is dishonored." All that is required of the holder is to give the indorser timely notice of the dishonor of the bill or note. Where presentment is called for, the paper is not dishonored until a demand has been made, and a simple notice that it is unpaid, will not charge the indorser of a note or the drawer of a bill; but as no formal demand is necessary in a case like the present, none need be either expressly or by implication stated in the notice. The object of the notice is to put the indorser upon inquiry, so that he may make himself secure, and when he is informed on the last day of grace that the note is unpaid, as he is presumed to know its terms and purport, knowledge is brought home to him of the default of the maker, and then his liability to pay is absolute.

In addition to the authorities already cited, the following will be found to sustain the law as above stated: Mills v. The Bank of United States, 11 Wheaton, 436; Caynga County Bank v. Warden, 1 Comstock, 414; Gilbert v. Dennis, 3 Metcalf, 504; Pinkham, Executrix, v. Macy, 9 ib., 175. It was at one time thought that the notice should state that the holder looked to the indorser for payment, but the later and better cases hold that this is implied from the fact

of giving notice.

There was no error in the direction of the Common Pleas that simple notice of non-payment was sufficient to charge the indorser.

As notice of non-payment was notice of the default of the maker, the allegations in the declaration of presentment, demand and refusal and notice thereof, were substantially proved, and it is only necessary to add that there is nothing in the objection that the notice did not state that the note had been protested. Judgment affirmed.

### MAINE.

## Bills of Exchange and Promissory Notes.

1. The payee of a note, after having indorsed and negotiated it, waives demand and notice, by agreeing with the maker to pay it and take it back into his own hands. (Marshall v. Mitchell, 35 Maine Supreme Court Rep., 221.)

2. Such an agreement, though made with the maker of the note, inures to the benefit of the indorsee, in an action against the indorser.

(Ibid.)

3. An indorsement of a note to a bank, without specifying the particular bank, (there being a blank space in which to insert the name,) is but a blank indorsement, which any lawful holder of the note may so alter as to insert his own name. (Adams v. Smith, 324.)

4. By the holder's lodging such a note at a bank for collection, such blank indorsement is not converted into an indorsement to the bank.

(Ibid.)

5. The indorsement of a note by the payee "on account of the

payce," made to a bank, without specifying the name of the bank, is not a restrictive indorsement. (Ibid.)

6. The authority of one who indorses a note as the secretary of a corporation, need not to be proved by any record or usage. It is sufficiently shown by uncontradicted testimony from a witness, that such person was the secretary and had the authority. (Ibid.)

7. A note indorsed and transferred, before its pay-day, by the payee to his creditor, in discharge of a debt, is to be considered a note transferred in the ordinary course of business, and in a suit by the indorsee against the maker will be protected against any set-off claims or equitable defences, which might have prevailed in a suit by the payee against the maker. (Ibid.)

8. The indorsee of a negotiable note purchasing it for value before its pay-day, may recover, in an action against the maker, though when taking the note he knew that, between the maker and the payee, there was a written stipulation that, on a specified contingency, the note was not to be paid, and although before the pay-day such contingency actually occurred. (Ibid.)

9. It is an essential attribute of a promissory note, that it be pay-

able in money. (Bunker v. Athearn, 364.)

10. An instrument in writing, acknowledging the receipt of money from the plaintiff, and promising to pay it upon a note due from him to a third person, and cause it to be indorsed thereon, requires no more than that the promiser should cause the indorsement to be made. As he might do this without the payment of the money, his promise does not constitute a promissory note. (Ibid.)

11. An obligation by the administrator of such a promise, to indemnify the plaintiff for having delivered such money to the promiser, gives no new vigor to the original promise, nor takes it

out of the statute of limitations. (Ibid.)

12. The consideration of a negotiable promissory note, cannot be inquired into, in the hands of an innocent indorsee, for value. (Malbon v Southard, 36 Maine Reports, 147.)

13. A negotiable note, transferred before it became payable by delivery only, may be indorsed by the administratrix of the payee after his death, with the same effect as if done personally by the payee. (Ibid.)

14. Where one, not otherwise a party to a note, puts his name upon the back before it is delivered to the payee, at the request of the maker,

he thereby becomes an original promiser.

15. And such relation is not changed or varied, although he adds to his name the words "responsible without demand or notice."

16. A negotiable note, transferred before it became payable by delivery only, may be indorsed by the administratrix of the payee after his death, with the same effect as if done personally by the payee. (Ibid.)

17. Upon a promissory note, the owner can maintain no action in the name of another, without his express or implied consent. (Skow-

hegan Bank v. Baker, 154.)

18. Where a note is made payable to, but not discredited by, a

bank, and it has no interest in it whatever, an action thereon commenced in its name and prosecuted without its authority, cannot be sustained.

19. Whether an action on such a note could be maintained in the name of the bank, even with its assent, quere.

20. An order for a specified sum, drawn upon an incorporated company, and payable to order, is not deprived of its negotiability by a statement, truly made therein, that it was drawn in compliance

of a vote of the company. (Byram v. Hunter, 217.)

21. The drawer of a draft, having knowledge that the drawee had. under an assertion of a want of the drawer's effects, refused to pay on presentment, waives the proof of legal notice of the dishonor, by promising to the holder that he would arrange with the drawer so that the draft should be paid. (*Ibid.*)

22. In a suit by the indorsee against the drawer, it will avail nothing to the defendant that the paper does not on its face admit that

- it was drawn for value. (Ibid.)
  23. By the 33d rule of this court, it is ordered, that "in actions on promissory notes, orders, or bills of exchange, the counsel of the defendant will not be permitted to deny at the trial the genuineness of the defendant's signature, unless he shall have been specially instructed by his client that the signature is not genuine, or unless the defendant, being present in court, shall deny the signature to be his, or to have been placed there by his authority." (Libby v. Cowan, 264.)
- 24. This rule is neither repugnant to law nor against sound policy. and may rightfully be enforced in the trial of matters embraced within it. (*Ibid.*)
- 25. Thus, in a suit upon a promissory note, the plea of the general issue will not require the plaintiff to have the signature, unless it is otherwise denied. (Ibid.)
- 26. One, who puts his name on the back of a note when it is made, or at a subsequent time, in pursuance of an agreement made with the payees at the time the contract out of which it originated, was made, is chargeable as an original promiser. (Leonard v. Wildes,
- 27. And such note is legal evidence to support a count for money had and received. (Ibid.)
- 28. Where a note is payable to partners, and by them negotiated, the indorsee, after releasing the partners, may call them as witnesses in an action against such makers. (Ibid.)
- 29. If one of the payees, being partners, of a note, negotiated it after the dissolution of the firm, without authority from his co-partners, their subsequent ratification will make the transfer valid. (Ibid.)
- 30. And although indorsed by one of the partners for a purpose foreign to the business of the firm, yet if afterwards ratified by the other partners, such transfer is effectual.
- 31. Where a note is given for personal property, to which the vender had no title, assumpsit to recover back the agreed price is not

maintainable in the absence of proof either that the note was negotiable, or that it had been paid. (Huntingdon v. Hall, 501.)

#### BANKS.

1. The official bond given by a bank cashier, with the condition required by the statute for his doings, and with condition for additional acts, though invalid as a statute bond, is valid at the common law, if such conditions require no immoral or unlawful act. (Franklin Bank v. Cooper, 36 Maine Reports, 179.)

2. The official bond of a bank cashier does not become valid as a contract until accepted. Though the law provides that in no case shall such a bond be signed by a director, yet such a bond, signed by one as surety while he was a director, will be valid against him, if it was not accepted until after he had ceased to be a director. (Ibid.)

- 3. The bond of a bank cashier, framed to cover past as well as future delinquencies, will be invalid against a surety, if his name was procured at the desire of the directors, they knowing that past defalcations existed of which he was ignorant, and withholding the knowledge from him, though with a suitable opportunity to communicate it. (*Ibid.*)
- 4. The capital stock of a bank can only be assessed once, and that upon the stockholders to the value of their shares. (Augusta Bank v. Augusta, 36 Maine Rep., 255.)
- 5. But property composing no part of its capital, so held by a bank, that no other person or corporation could be legally taxed for it as owner, is liable to be assessed to such bank. (*Ibid.*)
- 6. Thus, shares of a railroad corporation, which it may hold by an absolute title, may rightfully be assessed to the bank. (*Ibid.*)
- 7. A corporation owning personal property, not composing a part of its capital, is liable to be taxed for it in the town of its established place of business. (*Ibid.*)
- 8. An authority given by the vote of a corporation to sell and convey its real estate, may be reasonably construed to include a right to make a binding contract to convey at a future day. (Augusta Bank v. Hamblet, 35 Maine Rep., 491.)

#### RAILROADS.

- 1. County commissioners' appraisement of the damage done to an individual by the location of a railroad across his land, may be revised by a jury, as well upon the application of the railroad corporation as upon that of the land owner. (Kimball v. Kennebec & Portland Railroad Co., 35 Maine Reports, 255.)
- 2. The charter of the Kennebec & Portland Railroad Company, with its additional enactments, authorizes the erection of bridges and causeway, across navigable water, but requires them not to be built in such manner as to prevent the navigation of such water, or to occasion unreasonable detentions thereon. (Rogers v. Kennebec & Portland Railroad Co., Ibid., 319.)
  - 3. For the damage occasioned by so erecting the structure as to

prevent such navigation, or occasion such detention, the remedy is not by application to the county commissioners, but by action at law. (Ibid.)

4. The compensation provided by statute for damages occasioned by the location and construction of railroads, extends only to real estate or materials taken. (*Ibid.*)

5. For damages indirectly resulting from the lawful acts of a char-

tered corporation, the law affords no remedy. (Ibid.)

6. It is competent for the Legislature to authorize permanent erections across tide-waters or any navigable water, although the navigation may thereby be impaired. (*Ibid.*)

#### INTEREST.

1. Upon a note for money payable at a future pay-day, whether in an entire sum or by installments, " with interest to be paid annually," the interest which may have accrued in any year, may be recovered if sued for before the pay-day of the principal. (Bannister v. Roberts, 35 Maine Rep., 73.)

2. In a suit brought upon a note payable by installments, with interest annually, and declaring for the principal and interest, no interest upon interest is recoverable, unless the suit be commenced before

the pay-day of the last installment. (Ibid.)

3. In making up judgment upon an award, interest on the amount awarded cannot be included. (Kendall v. Lewiston Water Power Co.,

36 Maine Reports, 19.)

4. The mode of computing interest on notes where partial payments have been made, State in the case of *Dean* v. Williams, (17 Massachusetts, 417,) is adopted in this State. (Leonard v Wildes, 265.)

#### GEORGIA.

#### The Supreme Court on the Darien Bank Cases.

The Supreme Court has decided the following points in the cases recently argued before it at Milledgeville, of the creditors of the Bank of Darien against the State of Georgia.

1. That the State is not liable to pay up the unpaid installments on

her subscription to the capital stock.

2. That the State is not liable to redeem any portion of the bills of the bank still outstanding, or of the judgments founded on bills.

3. That the State was justifiable in forfeiting the charter, and seizing the assets of the Bank and placing them in the Central Bank.

- 4. That the State was justifiable in receiving, through its agent, the Central Bank, the depreciated bills of the Darien Bank from its debtors, and was not liable to the judgment or other creditors of the Bank to account for such collection, as if made in current funds.
- 5. That the State was justifiable in receiving from the debtors of the Darien Bank, against whom judgments existed, the depreciated

bills of said Bank, in payment of such judgments, and she is not liable to account to the creditors for such collections as if made in current funds.

6. That the two oldest judgments existing against the Bank have a priority of lien upon the assets of the Bank, and that all the current funds collected by the State from the assets, after deducting expenses, were rightfully paid to said judgments.

By this decision all creditors, of whatever description or class, save the holders of the two oldest judgments, (the Planters' Bank, and the Bank of the State judgment,) are entirely cut off and excluded; the assets being wholly insufficient to satisfy those judgments.

#### THE FRENCH LAW OF BILLS OF EXCHANGE AND BILLS OF LADING.

The New-Orleans Bulletin says that a case of much interest to commercial men has recently been decided in the French Court in Havre, directly the reverse of the English practice in regard to the use of shipping documents for the security of bills of exchange drawn against cotton and other produce from this country. It is also at variance with the hitherto received custom adopted by our bankers in regard to French bills. The ship's bill of lading has been held to control the property not only until the exchange is presented and accepted in Liverpool or Havre, but until the acceptance itself is made satisfactory to the holder or cashed at bank rate by the acceptor himself. Such, however, is not the law of France. The consignee in Havre is no party to any contract here outside the bill of exchange itself. The property passes to his control when the bill is accepted.

The case was as follows: a merchant in Mobile bought for a merchant in Havre 353 bales of cotton, and drew for the amount at sixty days' sight. The draft was sold to L. W. & Co., accompanied with the bill of lading, with the understanding that if the draft was accepted and the acceptance was satisfactory to the holder, the bills of lading be remitted to the person on whom the draft was drawn; but if it was refused acceptance, or if the acceptance was not satisfactory, then the holder was authorized to put the said bills of lading in the hands of another to effect the sale on account of the proprietor and apply the proceeds to the payment of the draft.

The bill was accepted by the drawee, who claimed in exchange for his acceptance the bills of lading, which the holder refused except on receiving good security for the ultimate payment of the acceptance.

An action was brought by the acceptor before the tribunal of Havre to obtain the bills of lading. The following points were decided by the court:

1. The holder of a bill of exchange not yet accepted, but who intends presenting the same for acceptance, cannot exact from the drawce who is charged with the fulfillment of the provisions of said bill any guarantee not stipulated in the contract of exchange itself.

Especially the holder of a bill of exchange cannot exact from the

drawee, in addition to his acceptance, a security for payment at the expiration of the term, or any other guarantee not stipulated in the original contract.

2. The holder of a bill cannot produce, in justification of his position, agreements between him and the drawee which are irrelevant to

the bill, and to which the drawee is an entire stranger.

3. An acceptance is sufficient when given in conformity to the rules laid down in Articles 122 and 123 of the Code of Commerce, and the drawee has the right, when he offers an acceptance conformably thereto, to insist on a delivery of the bills of lading of the goods for the payment of which the bill of exchange has been drawn.

#### CURRENCY OR MONEY.

Remarks on Currency or Money: Its Nature and Uses, and the Effects of the Circulation of Bank-Notes for Currency. By a Merchant of Boston. 8vo. pp. 112. LITTLE, BROWN & Co.

What is Currency or Money?—In treating the subject of currency or money, it may be well first to consider of what the present currency

or money of civilized countries actually consists.

Gold and silver have been recognized for many ages, by the general consent of mankind, as the standard of value; and it is more important now to investigate their uses and effects as money, than to advocate or deny their fitness for that purpose. They are the only universally recognized standard, by which to measure the value of all other articles; and they constitute the only real money of commercial nations.

Real money measures the value of all other objects, because it is in itself comparatively of an unvarying value. The gold and silver, of which it consists, are obtained with much difficulty and labor, and the annual supply of them, in a series of years, has usually been only about sufficient to balance their waste and their uses for other purposes than money. The quantity of the precious metals throughout the world has not often been increased or diminished to any great extent, and, as the purposes for which they are used do not suddenly vary, their value has been more uniform and regular than the value of other articles. The price of these metals is not altogether exempted from variation: but the changes to which it is liable are generally slow and gradual.

Gold and silver can easily be divided and again reunited without being diminished in value. Each one or any number of the smallest pieces always possess the same relative value, according to weight, as the same quantity possesses when united in one mass. Moreover, these metals have an intrinsic value, independent of their use for money;

because they are less subject to decay or rust than other metals, and because of their utility in the arts and sciences, and for purposes of luxury and ornament. These circumstances have rendered them a more suitable material by which to measure the values of all objects, of which the supply and demand is subject to greater changes.

While money continues invariable and unchanging in quantity and value, it continues to be a true measure of the value of all other things, and the rise and fall in the price of other commodities is the consequence of a variation in their supply, or in the demand for them, and consequently in their value. If an article of trade is increased in quantity, or becomes more plentiful, more of it is given than before for the same quantity of money. On the other hand, if the quantity of an article is decreased, if it becomes less plentiful, less of it is given than before for the same quantity of money; because, while the articles of trade vary in quantity and value, the money remains unchanged

in these respects.

If, however, by any means, the quantity of money circulating in any country be suddenly increased or diminished, that of itself will cause a rise or fall in the prices of other commodities. If the quantity of money is increased, a rise will occur in the prices of all other articles. decrease in the quantity of money occurs, all other articles will fall in To the public this will appear to be a general cheapness or dearness of all commodities, for which they cannot ac-Suppose, for instance, that by the discovery of very productive mines, the quantity of the precious metals in any country is suddenly increased. As they are obtained with less labor and trouble than before, and have become more plentiful, those who possess them will more easily and more readily part with them in exchange for other articles. In this way, a general advance in prices is commenced, which will extend to all articles. It is, however, only a greater cheapness of the money, and not a greater dearness of the commodities. The articles measured by it seem to cost more. That is, one receives for the same weight of gold and silver, a smaller quantity of any article than before. If the quantity of money should be suddenly lessened from any cause, the reverse of this would occur. Money being less plentiful, and requiring more labor and trouble to obtain it, becomes of greater value. Those who possess it are less ready to part with it in exchange for other articles, and require larger quantities of other articles for a given quantity of the precious metals. This is the beginning of a general decline of prices. But this decline, like the advance of prices, is only an apparent change in the value of articles of sale. It is, in fact, the greater scarcity and dearness of The things that are measured by it seem to cost less; that is, one receives a larger quantity of any article for the same weight of gold and silver than they did before.

If the rise of the price of any article, wheat for example, is a consequence of its increased scarcity as compared with the demand for it, the quantity that can be purchased for a given sum of money is diminished, whilst the quantity of other articles that can be purchased for that

sum of money remains the same. The sum of money being the same, it is evident that wheat has risen in value as compared with other articles. But, if a similar rise in the prices of all other articles has occurred at the same time, and the quantities of them that can be purchased for that sum of money have diminished in the same proportion, it is evident that the rise in the price of wheat is not in consequence of its increased scarcity; and that there is no change in its value as compared with other articles except money. The change is in the *price* and not in the value of the wheat. It is a decline in the value of money.

The average for a series of years of the price of wheat has been considered by financial writers as the best criterion of the value of the currency of a country, because the cultivation of wheat is spread over a large surface, and the quantity of it produced is of such magnitude, and the use of it so general, that its value cannot be materially affected, except by the seasons. For no combination can affect the value of all commodities at the same time; nor can the value of so abundant an article as wheat be controlled for a long series of years. Its value may fluctuate from season to season, depending on the condition and extent of the crops; but taking the average of a series of years, the quantity and value as compared with the demand for it, must be about the same, unless there has been some great improvement in the mode of production; which certainly has not yet been the case with regard to wheat and most other articles of food. These are and have been, for the most part, the result of simple manual labor. Therefore, any long-continued change in the price of wheat for which the seasons would not account, has always been ascribed to an alteration in the value of money.

Great and sudden fluctuations in the quantity of the precious metals in the world have seldom occurred. Whenever changes have taken place, they have been gradual, extending over a period of many years. And it has been difficult, at the time, to see or to believe that it was a change in the value of money, the standard of value, and not a change in the value of the commodities, which it buys. Changes in the value of articles of sale and commerce, arising from variations of supply and demand, are constantly occurring, and every one becomes familiar with them. But an alteration in the standard of value, that is to say, in the supply of the precious metals and the value of real money, is an unusual occurrence, and the consequences of such a change have been unexpected and not understood at the time. The effect of a great and sudden alteration in the quantity and value of money, may be seen by comparing the prices of some commodities before the discovery of the rich mines in America with the prices which those commodities bore subsequently; and it will afford full and complete evidence of the truth of the foregoing statements; because, although there are constant fluctuations in the prices of particular articles from time to time without any change in the standard of value — money — yet there cannot be a great and permanent change in the prices of all articles in general use without an alteration in the value of the standard by which the price is measured.

After the conquests of Mexico and Peru, the large quantities of gold and silver poured into Europe caused a continually increasing circulation of money. This produced a great rise in the prices of all commodities. In England, these enhanced prices were believed by many to have proceeded from monopolies granted by the government, and from forestalling. Admitting to the fullest extent, the evils and injuries of the system of court favoritism then prevailing, still it is now well understood that the true and efficient cause of the high prices was the lessening of the value of gold and silver, in consequence of the quantities produced from the rich mines of Mexico and South-America. The other causes which at the time justly excited so much popular

clamor were, in comparison, but trifling in their effects.

Freedom of commerce soon equalizes the value of the precious metals in all countries that trade with each other. If gold and silver are brought in unusual quantities into one country, they quickly spread themselves through the others. The process by which this is effected is very plain. The merchant is always seeking to send his merchandise to that country where he can obtain for it the most money; in other words, the largest quantity of the precious metals. The precious metals he sends to those countries where the largest quantities of such merchandise as he wants can be obtained for the smallest quantity of the precious metals. Spain, for example, was the nation to which came the first great influx of gold and silver from America. That influx, by greatly adding to the amount of the money in circulation in Spain, raised at once the price of all commodities in that country above the level of the prices in other parts of Europe. These high prices encouraged the merchants of foreign countries to send goods into Spain for sale, and to take away the gold and silver which was received for them; and the merchants of Spain found an immediate profit in sending gold and silver abroad, where larger quantities of commodities could be obtained for them than in Spain. Thus the treasure which had been poured into Spain from America quickly spread to other parts of Europe; and thus, whenever the amount of money in circulation in any country is greatly increased, the enhancement of prices produced by it is certain to cause an increase of the import of goods from abroad, which will continue until the circulation of that country and of the prices of merchandise are equalized and at par with the prices in surrounding nations.

When, in the commerce between countries, each takes from the other about the same amount in commodities, those persons who wish to pay money abroad buy the bills of those who have to receive money abroad, and, by this exchange, the payments in each country are met and settled without the necessity of exporting the precious metals from either side. The "course of exchange" is said to be against the country which has imported more than it has exported, because from that country there is a balance due to the other, for the payment of which no bills can be had, and which must, therefore, be liquidated by the transmission of coin or bullion. This must have been the case with Spain during the period referred to. The "course of exchange" with other countries must have been against Spain, in consequence of

the large importations of foreign products, until the value and amount of the money in circulation in Spain, and the prices of commodities approached nearly to, or were at par with, the money and the prices of the surrounding countries. While there was an excess of the precious metals in Spain, it may have been no disadvantage to have had the "course of exchange" against her. It may generally be admitted, that any countries producing gold and silver can, to a certain extent, afford to have the course of exchange against them, and may export the excess of bullion beyond what may be required for use at home.

The effect of the vast and rapid addition to the currency or money in Europe in the sixteenth century is shown by comparing the prices of many articles of trade, at times preceding that event, with the prices at a subsequent period. Carefully-prepared tables of the prices of wheat for successive periods, between the years 1423 and 1700, show an increase of price of five-fold, which has continued, with only occasional variations, to the present time; and for which no other cause has ever been assigned than the increased quantity and cheapness of the precious metals. It appears by those tables, that the average price of wheat from 1423 to 1560 was about ten shillings sterling per quarter of eight bushels, and from 1561 to 1700 it was nearly fifty shillings.

The value of wheat from 1561 to 1700, while the average price was nearly fifty shillings, was not greater than its value in the previous years, between 1423 and 1560, when the average price was about ten shillings, if there was the same degree of change in the prices of other articles. If the farmer could get no more of the articles which he needed, and which he obtained in exchange for the wheat that he sold, the price in money, which is only the measure of values, had alone changed. If fifty shillings, between the years 1561 and 1700, would buy no more of the articles which the farmer had to purchase than ten shillings would buy previously, the money must have fallen or depreciated in value to that extent. One dollar a day would therefore have been no better wages to a laboring man in the year 1700, than twenty cents a day had been a hundred and forty years before, because it would not purchase for him any more of the necessary supplies which he required for the maintenance of his family.

The following curious document in Doubleday's Financial History of England, extracted from "Drake's Eboracum," is a table of prices at York in the years 1393 and 1733. It shows that the same effects had been produced on the prices of other commodities as on wheat. This must have been occasioned chiefly by the same cause, although it is possible, as that author remarks, that different rates of duties may have affected the prices of some of the articles of import in the table. But there can be no doubt that these lists of prices present substantially a correct comparison of the prices of articles in general use at these two periods. The prices of 1393 were assessed by the judges of the assize, aided by the bench, "to prevent combinations to enhance

prices" when Richard II. and his court were at York.

Prices proclaimed at York in 1893.

Prices at York, 1738.

At Chester, in England, the records of the market prices are extant so far back as to the year 1378. It appears from them, that in the year 1379, the price of a bushel of wheat was 6d.; a gallon of white wine, 4d.; a fat goose, 2d. "In 1437, wheat sold for seven pence a bushel, being a very dear rate according to that time; so that the poor in Chester and elsewhere made their bread of peasen, vetches, and fearn roots."

Since the year 1700, and until the recent discoveries of gold in California and Australia, the quantity of the precious metals in the world had not very materially varied, though there was some fluctuation in the relative value of gold and silver. The average price of wheat, taking long periods of time, has continued about the same. From year to year, it has varied with the character of the seasons, and in some countries, with the condition of the currency. It is well known that the effects in California and Australia have been similar to those produced in Spain after the conquests of Mexico and Peru; that is to say, to raise the price of commodities of all kinds above the level of the prices of other countries. Merchants have found an immediate profit in sending merchandise to California and Australia, to exchange for gold. Their prospects of profit may not always have been realized, in consequence of the effect of the abundance of gold on prices having been often counteracted by the very excessive supplies of many commodities. The activity of modern commerce diffuses rapidly the newly-discovered gold, and spreads it over the whole of the civilized world; but sufficient time has not yet elapsed for results from it of a character so marked as to be at once recognized and appreciated.

Effects of Paper Money.— Thus far we have given our attention to the subject of currency in the form of metallic money. Let us now consider the new element of paper money which has been introduced into the currencies of some countries, though all its effects are not yet so clearly and precisely understood as to cause but one opinion with

regard to them. This new element renders the operations of money more uncertain and more complicated. It increases the difficulty of obtaining exact data upon which to base opinions that can be positively verified within a short period of time. The use of paper money for currency has been so profitable to many of those who have furnished it, that they are not generally disposed to encourage any discussion concerning its uses and effects; but, as it exercises an important influence upon the currencies of some of the most commercial countries in the world, it is necessary to know something of its character.

From perceiving certain conveniences in commerce from the use of notes of hand and bills of exchange, variously contrived forms of promises and orders for the payment of money were probable suggested. These may have gradually led to the issue of promissory notes for small sums, payable to the bearer on demand, and transferable from hand to hand, to be used as a substitute for money. They are called paper money. They are not money. They are, in fact, only promises to pay money. It would be as correct to say that a contract to deliver flour was in reality flour, as to say that such promises to pay money were really money. Paper money possesses no intrinsic value; it has only a derivative or secondary value, arising from the belief, founded upon the good credit of those who issue it, that it will command, at any time, the amount of the promise in real money, or that it will be received by others in satisfaction for debts, or for the purchase of any articles, as real money.

When an amount of paper money is added to the circulation of a country, except so far as an amount of coin is withdrawn from circulation and held in reserve by the banks that issue it, it decreases the value of the money in circulation, for the same reasons and to the same extent as the addition of the same amount of gold and silver would have diminished it. The gold, silver, and paper all depreciate together. And this is shown by the rise that immediately takes place in the prices of all articles of sale and commerce. It is this effect on prices that renders paper money so popular among persons engaged in trading pursuits. They are satisfied with this effect of it, which enables them to sell their merchandise at enhanced prices, and to gain apparently large and unexpected profits, without heeding the difficulty of realizing and investing those profits and rendering them secure.

Whether the paper money thus added to the circulation be inconvertible, or whether it be redeemable on demand in specie, so long as it is in circulation and in actual use, its effect of diminishing the value of the money in circulation would be the same. A rise in the prices of all articles would take place, and this general advance of prices would cause increased importations of foreign merchandise, and a demand for gold and silver to export in payment for them. As more paper money would be issued to supply the place in the circulation of the amount of gold and silver thus withdrawn from it to export, the volume of the currency would not be lessened. The export would continue without affecting the amount of currency in circulation, until the continued advance of prices and consequent increase of importa-

tions had rendered the demand for specie so intense that there would be the greatest difficulty in meeting it.

If the paper money were not redeemable in specie, the demand for gold and silver to export would increase their value as compared with the paper money, and they would be sold at some premium. In other words, the paper money would be depreciated as compared with specie. But, if the paper were redeemable on demand in specie, the gold and silver could be obtained for it without the payment of any premium; as any one possessing the paper money could exchange it for specie by demanding it, It is often said, that a currency consisting of paper money redeemable in specie on demand cannot be depreciated because of the demand for specie it would at once produce.\* As it is the depreciation which causes the demand for the specie that is to be the remedy, some degree of depreciation must first occur. But the remedy of a demand for specie will not operate, to any great extent, until the depreciation has continued long enough to produce an advance of prices and increased importations. It will not create the demand for specie to any great extent, until it has affected the importations. And, in fact, it is usually by the increase of imports and the rise of exchange, and the demand for specie to export, that a depreciation of the currency renders itself perceptible. If the paper were not convertible into specie on demand, the extent of the depreciation would be indicated in some degree by the premium on the specie. But it is not always a certain index of the extent of it. The amount of coin withdrawn from circulation to export is at first supplied by an addition of paper money. The depreciation of the currency may therefore continue for a long time before it is affected by the demand for the precious metals to ex-

The depreciation of paper money, as compared with specie, is one of the consequences of inconvertible paper money. This depreciation is often confounded with the depreciation of the local currency as compared with the currencies of other countries. The misfortune is, that these two evils of depreciation, both of local currency and of foreign exchange, may, and frequently do, occur at the same time. In the sixteenth century, the currencies of Spain and of the other parts of Europe consisted wholly of specie. Yet the currency of Spain became

\* The following account of a recent affair shows how far, in some parts of the United States, public opinion allows convertible paper money to be converted:

A BANKER HUNG IN EFFIGY—EXCITEMENT AT VERSAILLES.—The branch of the Commercial Bank of Kentucky, located at Versailles, Woodford county, has been, for several months past, greatly embarrassed by the constant and heavy drafts made by Mr. Barclay, a Lexington banker, upon its vaults. It was a custom with that gentleman to collect all the notes payable at the Versailles branch, and present them at the counter for redemption. The drain upon the bullion of the bank required very skillful financiering, on the part of its officers, to prevent a collapse, and, as a consequence, it was impossible for the institution to afford merchants, farmers, and tradesmen the desired discounts and other monetary facilities. Thinking that this draw game had been played sufficiently, the citizens of Versailles met together on Saturday, passed resolutions denouncing the conduct of Barclay, and then proceeded to hang him in effigy. The indignant people also promised to make summary work with Barclay, or his clerk, if either ever again molested the vault of their bank.— Louisville Courier, of Tuesday, January 30, 1855.

greatly depreciated in comparison with that of the other countries, by reason of her supplies of the precious metals from America. So, at the present day, when paper money is redeemable on demand in specie alike in the United States, England, and France, no one can doubt that the abundant paper money in the United States, with its notes even so small as one dollar, is more depreciated than the currencies of England and France, where the amounts of bank-notes in circulation are restricted, and where no bank-notes are allowed of smaller values than

twenty-five and twenty dollars, (£5 and 100 francs.) The greatest mischief of a depreciation of a currency of paper money, whether it is redeemable on demand in specie or not, is, that it is constantly varying in value by changes in the amount of such money in circulation. This operates with great injustice and great injury to the community, though individuals are often made rich by it. Great injustice occurred towards the people in Russia when the paper money circulating as currency there was allowed to depreciate to nearly one quarter of the value at which it was first issued. It then represented the silver rouble, equal to nearly eighty cents of our money. Not being convertible on demand in specie, it gradually diminished in value, as increased quantities of it were issued, until about four paper roubles were required in exchange for one of silver. It would have been equally unjust to have restored these paper roubles to their original value after the public had become accustomed to their depreciation, and had based all their transactions for years upon that depreciated value. Being under the control of the government, after the general peace of Europe in 1815, any further depreciation was prudently guarded against by regulating the amount in circulation, and adapting it to a relative value with the silver coin, which was annually declared, and which, though varying slightly in different years, was usually about three and six tenths of paper to one of silver. It continued thus, for many years, to supply the community with a currency of nearly uniform value. It has since been entirely withdrawn from circulation, and new paper, convertible into specie on demand, was issued in the place of it, of the same value as the silver coin of the country, at the rate of one for three and a half of the old paper roubles. The money of accounts was gradually and easily changed. The people had become accustomed to the difference of value between the old paper and the silver rouble. They were not required to believe that there was no difference, as was unwisely and ineffectually attempted in Great Britian during the suspension of specie payments. There, it was made illegal to estimate in payments any difference between the coin and the paper money in circulation, although light guineas, which, being below the standard weight, were not a legal tender, often sold for more than thirty shillings of paper

The paper money of our own country during the Revolution, from 1775 to 1781, known as "the continental money," affords an instance of a different character. The first issue of it was made by Congress in August, 1775. It continued for some time without depreciation, and until the amount exceeded nine millions of dollars. In April,

1778, the amount in circulation was thirty millions of dollars. The condition of the war was then most discouraging, and no limit could be perceived to the amount that might be issued. The value became depreciated, to six dollars for one of silver. While the issue of nine millions had been at par, and would have remained so, if no additions had been made, the thirty millions in circulation came to be worth only five millions in hard money.

The capture of Burgoyne's army, in October, 1777, and the treaty with France, opened a more favorable prospect, and in June, 1778, though the issues of the continental money had been suddenly enlarged to more than forty-five millions of dollars, the depreciation was only as four of paper to one of silver. Soon after the probabilities of peace again seemed as distant as ever. The value of the continental money then diminished constantly and rapidly, never to rise again.

In March, 1779, the silver dollar was worth 30 paper dollars. In January, 1780, " " 40 " " In January, 1781, " " 80 " "

and in May, 1781, it ceased to circulate as money, though the notes were afterwards purchased for speculation at rates varying from 500

to 1000 paper dollars for one of silver.

The total issues of the continental notes, three hundred and sixty millions of dollars in all, probably at no time exceeded the value of fifteen millions of silver money. This paper money effected a good and a great work at a most critical time, and the loss by its total depreciation was not much greater, or less justly distributed, than it would have been by any scheme of taxation, or by any other method possible in those difficult and revolutionary times. No attempt to redeem this paper money has ever been made by the United States. In view of the impossibility of indemnifying the really meritorious creditors of the country, further than was afterwards done by the pension laws, by the allowance of claims, grants of military bounty lands, and appointments to government offices; and considering, moreover, that the great rise in value, by the redemption of this paper money in coin, would have been as unjust to debtors as the great depreciation of it had before been to creditors, perhaps the opinion may be entertained that the government rightly abandoned the continental money in its fallen condition.

A depreciation of currency may take place, even when the precious metals are alone used, occasioned by a great addition to the quantity in circulation. It occurred in Spain after the conquests of Mexico and Peru, to which reference has been made. Such depreciations, however, have seldom happened, because of the infrequency of great additions to the precious metals. When such an increase of the quantity of gold and silver has occurred, the efforts have been gradual and spread over a period of many years. But wherever paper money is used for currency, the depreciations produced by additions of it to the circulation occur often. They are sure to take place again and again, almost as soon as they are remedied, and are rapid and violent

in their consequences, causing at frequent intervals much alarm, bank-ruptcy, and distress.

With a mixed currency, consisting chiefly of bank paper redeemable on demand in specie, whenever by reason of the general advance in prices, and the consequent increase of imports, the demand for specie has become so urgent that it is difficult to meet it, the banks that have issued the paper money become alarmed for their safety, or for their ability to continue to pay specie. Then commences the remedy for the depreciation of such a currency. The export of specie did not produce the remedy so long as the volume of the currency was not diminished by it. But when the demand for specie has become so intense, or the quantity of it so much diminished, as to alarm the banks, the remedy commences. It is a sure though a sharp remedy. It is brought into operation by stopping all discounts at the banks, and requiring the payment of all previous loans as they fall due. England, this is usually preceded or accompanied by sales of securities belonging to the banks. Traders and merchants are forced at such times to make great efforts to obtain money to pay back their loans to the banks. To do this, they must sell property at low prices, or borrow money at exorbitant rates. A general decline of prices is thus produced, which soon renders the import of many articles of merchandise from abroad unprofitable. Many kinds of merchandise become so cheap that it is advantageous to export them in order to bring back specie. The payment into the banks of previous loans, while the banks refrain from making any new loans -— and the exchange of the paper money at the banks for specie — and the sums withdrawn from circulation by the sales of securities belonging to the banks—soon reduce the amount of the paper money in circulation. Thus the currency is restored to a sounder condition by approaching more nearly to a specie basis.

This is the only process by which to remedy the depreciation of a mixed currency consisting partly of paper money redeemable on demand in specie. It is a process which invigorates the currency at the expense of the industry and the enterprise of the country.

"But these alternations of bank expansions and nominal prosperity, followed by bank contractions, disappointments, and, perhaps, failures, are very much to be deprecated. The banks, to be sure, have no difficulty in these cases; if well managed, the whole pressure is thrown on the mercantile community."— Hon. Nathan Appleton.

There is always money enough during these contractions of the currency to enable all those to pay their debts who have sufficient property. But the value of their property must be estimated at a new and reduced scale of prices. Money can be obtained either by the sale of property, or by borrowing at a high rate of interest. Money may cost one per cent a month, or it may be worth double that rate. Not that there is more money at these high rates than at the lawful rate of interest. The only difference is, that at the high rates, it can be borrowed, while at lower rates, the possessor may prefer to make some other use of it. The question to be considered

by the merchant or trader who has money to pay at such a time, is, whether to sell his merchandise at the reduced prices, or to borrow money at the high rates, and continue to hold his merchandise, with the hope of selling it afterwards at prices so much higher than the present reduced price that the difference will more than pay the high rates for the borrowed money. The prices of merchandise and of property of all kinds must be accommodated to the new condition of the currency, which may be sufficient to conduct the business of the community at the reduced scale of prices, when it would not be sufficient if prices were maintained at former rates. These differences in prices, produced by contractions of the currency, often render bankrupt many of those who are so unfortunate as to owe at such times large amounts of money.

The wealth or capital of a country is made up of all the various kinds of property that exist in a country, including all those commodities which are consumed by use and annually reproduced, such as the articles of food and clothing, as well as the objects of a more permanent character, such as the cultivated lands, dwelling-houses, warehouses, and barns, the buildings and machinery of manufactories, tools for agricultural and mechanical purposes. All of these are not immediately consumed by use, but continue to perform the service which they render to the community over and over again, year after year. The money or currency of a country, when it consists of the precious metals, is another of the items of wealth or capital of a country belonging to the class of permanent property, which is not consumed by use; but, being once in the possession of a country, it remains always ready for use over and over again. As the warehouses and barns remain, and year after year perform the important service of protection and storage for many of the articles of property, so the coined money of the country continues, year after year, to perform the important service of measuring the values of all other articles in the daily transactions of trade and commerce.

It has been stated by some writers on finance and currency, that the aggregate amount of capital invested in the warehouses and barns of a civilized community is equal to the whole amount of the money required to carry on the commerce and trade of that country; and that the warehouses and barns could as well be dispensed with, and the articles which are usually stored in them, kept in open fields and protected from the weather by temporary and cheap coverings, as the coined money could be dispensed with, and paper money used as a substitute for it. The inconvenience and loss and injury to the commodities, which required to be stored, would often, in a single year of unfavorable weather, be equal to the whole cost of substantial warehouses and barns. And so with the money of the country; the inconvenience and injury and losses occasioned by the use of paper money may not always be so apparent, but, often in a single year, they exceed the whole amount of coined money that would supply a substantial and permanent currency for the country.

The amount of property returned for taxation in the State of Massachusetts is about six hundred dollars a head for the population of the

Commonwealth. The amount of coined money required to perform the business of an active commercial community has been estimated on the average at about ten dollars a head for the population. If this is correct, less than two per cent of the amount of the taxable property of this State is required in coined money for currency to perform all the business of the community. No one can doubt that the depreciation of the value of property and the losses produced by a single instance of the violent fluctuations of the currency, which so often occur in a country where paper money is used, is far more than two per cent of the taxable property of that community.

#### BANKING IN CONNECTICUT.

REPORT OF THE BANK COMMISSIONERS FOR THE YEAR 1855, TO THE GENERAL ASSEMBLY OF THE STATE OF CONNECTICUT.

I. Banks. II. Savings Banks. III. Life Insurance Companies.

THE Bank Commissioners submit the following Report:

In view of the financial difficulties in which the country has for a long time been involved, affecting primarily and peculiarly all moneyed institutions, we regarded it as our duty to make an early and strict examination into the condition of the various banks of this State.

We felt confident that, if these corporations were confining themselves within the salutary restrictions imposed by law, and were in truth in a sound condition, such an investigation would promote their interests. The approbation of the Commissioners, which, under such circumstances, would be gladly given, would produce in the public increased confidence in them. If, on the contrary, they were disregarding the law, and becoming unsafe, the sooner their condition was generally known, the better it would be, both for them and for the public. Entertaining these views, we have visited each of these institutions twice, and several of them a greater number of times.

The officers of the banks furnished us with every facility for becoming thoroughly acquainted with their condition.

We considered ourselves invested by law with the power of requiring answers under oath to such inquiries as we might think proper to make. Believing it to be our duty, we therefore drew up a series of interrogatories, calculated to bring to view the true condition of each bank, and transmitted copies of them to the proper officers.

These interrogatories were all returned, and, with but few exceptions, with great promptitude, with sworn answers. As the result of our investigations, we do not hesitate to pronounce all the banks of the State in a sound condition.

The whole number of the banks in the State is sixty-seven, with a

total capital of \$17,145,451.84. Of these, thirteen were organized under the General Banking Law, and have a capital, in the whole, of \$2,948,169; leaving the number of chartered banks fifty-four, with a capital of \$14,197,282.84.

The Commissioners are fully of the opinion, that the banking capital of the State, if more equally distributed, would be abundantly suf-

ficient.

No new bank should be chartered, unless it is clearly shown that it is imperiously demanded by the wants of some particular locality.

In our opinion, a uniform system of organization would be far preferable to the present mixture of different kinds. Each mode of granting banking privileges has its advantages and disadvantages.

Long experience in this State has shown, that when the chartered banks have been carefully guarded, and when the Bank Commissioners have faithfully discharged their duties, the community have been furnished with a safe circulation. We are not satisfied that, as a whole, this system of establishing banks is not, to say the least, fully equal to any general banking law which has yet been devised.

Five new banks were chartered at the last session of the Legislature. Two of them, the Elm City, and the Stafford, have been organized. The stock of the Stafford Bank has all been taken, the installments paid according to the provisions of the charter, and the

bank is now in successful operation.

The stock of the Elm City Bank was subscribed, and ten per cent of the capital paid in. The second and third installments were called for according to the provisions of the charter, but owing to the stringency of the money market, they have only in part been paid. The amount paid in has been safely invested, ready for use, if the bank should go into operation.

We understand that an application will be made to the Legislature for leave to commence business with a less amount of capital paid in than is required by the charter. We see no objection to having this

privilege extended to them.

The Wooster Bank, in Danbury, was organized under the General Banking Law, and bonds to the amount of five thousand dollars were lodged with the State Treasurer, on which a premium of four hundred and forty-six dollars and forty-nine cents was paid. Bills were procured and issued, of which four thousand nine hundred and ten dollars remained still in circulation on the first of April last, although the stock is said to have been merged in that of the Danbury Bank We considered the bills safe, but could not approve of such a course. We therefore recommended that the bills should be withdrawn from circulation, which we have reason to believe will be done as soon as practicable.

In one instance, a bank has, since the law of the last session on the subject took effect, furnished another bank with bills for circulation, under an agreement that these bills be protected. The amount of this protected circulation is about thirty thousand dollars. This has been done under a claim that the agreement was made before the law

took effect. We considered the transaction as a violation of the statute, and so informed the parties concerned in it. But the Commissioners are assured that the contract will soon be closed.

Several banks have violated the law which forbids them from making discounts for directors beyond a certain amount. The City Bank of Bridgeport, during the year prior to the 10th of January, 1855, discounted paper on which each of seven of the directors, including the president, out of nine, was, as an individual, or a member of a firm, maker, acceptor, or indorser, to amounts varying from \$3358.42 to \$8837.41, although the capital paid in was less than \$100,000, and consequently the amount authorized by law was only \$3000.

At the annual meeting of the stockholders, on the 10th of January, 1855, six of the seven directors above referred to were reëlected, and commenced discharging the duties of the office, although this is expressly prohibited by law. These directors have all resigned, and others have been appointed to fill their places.

Since that time, we believe, from the examinations we have made of its affairs, that it is well conducted, and is entitled to the confidence

of the public.

The highest amount discounted by the Pahquioque Bank for any of its directors, was \$5683.80, the capital actually paid in being only \$119,080, and the amount authorized by law only \$5000. The amount so discounted, however, has recently been reduced within the requirements of the statute. By the 238th section of the Act concerning Communities and Corporations, in the Revised Statutes, the bank is made liable to a heavy penalty for such violations of the law as have been specified, and for other unlawful acts of the directors.

The manifest hardship and injustice of punishing innocent stock-holders for the misconduct of directors, which they can neither anticipate nor control, has hitherto prevented the enforcement of such penalties. We would recommend such an alteration of the law as will subject the directors of a bank who participate in an illegal transac-

tion, and not the bank itself, to punishment.

Experience has shown that the directors of banks make constant efforts to increase the dividends of the corporation to which they belong; the effect of which is, to give a higher value to the stock, and a more clevated position to the institution. So long as they keep within the provisions of the laws which have been made to hold them in cheek, such a course is praiseworthy. But this ambition too often leads them to give a loose construction to these laws, and, in some instances, to disregard them. Banks, with all these restrictions, have some peculiar privileges, with which they ought to be contented.

Many, and perhaps all of the banks, charge a per-centage on drafts payable in other States. In some instances, there is reason to believe, the amount is sufficient to constitute a violation of the law of the last session, restricting the interest to be taken by banks to six per cent. It is reasonable that some per-centage on exchange should be allowed, but the amount, we think, ought to be limited by law.

The practice, which has of late prevailed to an unwarrantable extent, of loaning money abroad on railroad bonds, stocks, and similar securities, has been to a great extent discontinued. Some banks are still much cramped in their operations, by the consequences of their former delinquencies in this respect. All, however, are improving their condition. None, during the pressure, failed of sustaining themselves, and all endeavored to accommodate the public as far as they deemed it safe.

The banks generally, during the past year, have carefully avoided making large loans to individuals or single firms, or corporations. Such a course is worthy of commendation, and will prevent ruinous losses.

It will be seen by the statement accompanying this report, that the amount both of discount and circulation has within the past year materially diminished. The banks are therefore in a good condition to supply the wants which will grow out of an increase of the general business of the country. The law of last year, restricting the amount of loans and discounts out of the State, to one fourth of the capital stock and deposits of each bank, has accomplished, to some extent, the object which the Legislature had in view, of keeping capital at home. But we are of opinion, that some of its requirements and penalties are unnecessarily severe, and would suggest a modification or repeal of some of its provisions.

#### I. SAVINGS BANKS.

The several savings banks and savings institutions of the State, have received the attention which their importance required. The number of depositors is now very large, and constantly increasing. They are the depositories of a very large amount of money, and are of great importance to a numerous and highly meritorious class of our citizens, and should at all times receive the fostering care and watch ful attention of the State government. The managers of these several institutions are among the first men for ability and integrity in the vicinity where they are located, and we are pleased to say, that, so far as we have been able to learn, they have managed their affairs with great fidelity to the interests of the depositors and the public, as well as with a due regard to economy. A custom prevails to some extent, of taking interest on loans, six months in advance, or rather, of receiving discount, instead of interest, after it has accrued. This custom assists the officers of these institutions in making up their accounts for dividends, furnishes a fund to loan for a short time, that assists materially towards paying expenses, and to which we think there is no reasonable objection. There are now in operation in this State, under charters granted by the Legislature, twenty-six savings institutions; the condition of each is exhibited by the annexed statements, compiled from returns made to us, under oath, by the treasurers of these institutions respectively. From these statements it appears, that there are 54,589 depositors, varying in the amount of deposits, from a few

cents to several thousand dollars. The total amount on deposit, including balance of interest account and surplus funds on hand, is \$10,006,131.18. The securities taken for this large sum, have been selected with great care and skill, and we believe are as safe investments as can be found, for an equal amount, in any monied institutions in this country. One or two of these institutions, as will be perceived by the annexed statements, have a greater proportion of their funds loaned on personal security, than the existing laws allow. But this appears to be but a temporary matter, and will soon be corrected by the directors thereof. The whole amount of suspended paper reported to us, is \$1164.22; estimated loss about \$232.

It appears by the Bank Commissioners' Report in 1847, that there existed in this State at that time, nine savings institutions, with 22,663 depositors. Total amount on deposit, including surplus earnings, etc., \$3,221,591.33; increase in eight years, in number of depositors, 31,926; in amount on deposit, \$6,784,539.85; in number of institutions in operation, 17; all tending to show the confidence reposed in the management of them, by the public, and the care and watchfulness necessary to continue them in the high position they now occupy.

#### II. SAVINGS AND BUILDING ASSOCIATIONS.

The Commissioners have also visited the numerous institutions commonly denominated building associations, organized under the law of 1850. These corporations were designed to effect a two-fold object; to furnish a place of deposit especially for small sums, and to provide in this way a species of savings banks; and also to use the funds so deposited, as well as the stock of the association, in making loans to the stockholders, on such terms as will enable them to own the dwellings in which they live, instead of renting them. They have already enabled a large number of persons, of small means, to attain so desirable an object,

These associations, generally, are under the control of gentlemen of

the highest respectability.

Upon a thorough and careful examination of their affairs, we do not hesitate to say, that generally their loans are made upon ample security.

The stock of a large portion of these institutions is divided into shares of \$200 each, and is payable in installments of \$1 per share

monthly.

These installments, which are paid in monthly, are called stock, and constitute the capital of the institution, and is loaned to shareholders, if they wish to borrow it, at such rate of bonus as may be agreed upon-

The loans are of two kinds, permanent and temporary.

The permanent loans are generally made for a bonus of a given per

cent, taken for the whole time, or monthly, in advance.

The temporary loans are made for a limited time. A bonus in addition to the legal rate of interest for these loans, is always paid in advance, varying from one fourth to two per cent a month.

In our opinion, some legislation is needed to prevent such abuses. But the extent to which money has been invested in these institutions, renders it necessary to use great caution in applying a remedy.

### III. LIFE INSURANCE COMPANIES.

Life insurance companies are of two classes, namely, stock and mutual. Stock companies are owned and managed by the stockholders, and the institution rests upon a fixed capital. Mutual companies are owned and controlled by the policy-holders, and the capital grows as the company increases, in the amount insured. There are now doing business in this State, under charters granted by the Legislature, six life insurance companies, agreeably to the provisions of their several charters. A full statement of the condition of each company, from returns made to us by the secretaries of each, is hereto annexed. From these several statements it appears, that the whole number of life policies issued and outstanding, is 15,597; number of term policies, 4741. Total number of policies outstanding, 20,338. Total amount at risk thereon, \$36,714,776. Total assets, \$3,447,346.60. The receipts, disbursements, liabilities, and other matters connected with their management, will be best understood by an inspection of these several

In presenting the reports of these several companies, the Commissioners wish to state, that while they are fully sensible of the great benefits to be secured, in case of premature death, to the families of the deceased, who might otherwise be left destitute, they are impressed with the conviction, that *cheapness* is of far less importance than stability and safety; and admitting that the several companies in this State are conducted, as we believe they are, by men of ability and integrity, we hope the time will soon arrive, when public sentiment will require the entire abandonment of the *credit* system, and a strict adherence to the cash system, the only *true* principle on which this department of business should be conducted.

All of which is respectfully submitted.

SELAH STRONG,
D. C. PENDLETON,
JOHN CALLUP, 2d,

Bank
Commissioners.

Hartford, May, 1855.

The statements referred to in the Report, will be published by us in a subsequent No.—ED. B. M.

#### BANKING IN MISSOURI.

WE refer to this subject at the present time mainly with the view to call the attention of editors of newspapers in this State to the neecssity of publishing the proposed amendment to the Constitution in their respective papers. According to the terms of the Constitution, all papers, German as well as English, and weekly as well as daily, are required to publish the amendment, and to send their account to the Sceretary of State. We are the more particular in calling attention to this subject now, for the reason that, at the last session of the Legislature, it did appear that an amendment of the Constitution, in relation to Schuyler county, was not published in four or five of the papers of the State—probably from some neglect of publishers of the papers, but it was construed by the Legislature into a compliance with the Constitution. Doubtless it was so, for there is no way of compelling such a publication; but in the present case, embracing a proposition of vast importance to the State, more than usual pains should be taken to see that the proposed amendment is published before the end of July.

This amendment is of very great importance. It proposes to repeal the present provision of that instrument in relation to banks, and to substitute therefor ten banks, with a capital of twenty millions of dollars, founded upon a specie basis. This latter clause is designed, of course, to cut off all banks founded upon State stocks, or any other description of security, save that of specie. There may be those who think that it might have been better to give a wide berth to banking upon Missouri and other stock securities, but it is enough to know that the late Legislature could not have been induced to pass any amendment with a clause of this kind in it. We have to take this amendment just as it is, and to argue for its adoption by the Legislature which is to be elected a year from next August. If it be not done then, we shall, in all probability, be without any bank whatever.

But this amendment ought to be adopted. It repeals a most ridiculous provision in the present Constitution, adopted at a time when there was a general distrust of banks—when many of our citizens were in the habit of issuing shinplasters on their own account—and when, it is too true, the State was inundated with the issues of irresponsible bank corporations. At that time, too, our population did not exceed more than sixty thousand in the whole State—and the city of St. Louis, if it was a city then, numbered only a few thousand inhabitants—steamboats arrived weekly, instead of hourly, as now—and the trade was altogether inconsiderable. It may be said that such a provision in the State Constitution gavevery conclusive evidence of the short-sightedness of the public men of that day, and so it did. but it has not done so much mischief as to prevent our changing it now. We must have banks. They have become a "fixture," an absolute necessity, in commercial and all business transactions, and the

speediest and best way to obtain them is, to adopt the amendment of the Constitution now before the people.

In our opinion, two things ought to be done in regard to banks in this State, and we enunciate them now, without intending to discuss them. The first is, that the amendment now before the people should be adopted, as likely to furnish a full and safe banking capital for the State for some years to come, and a circulation which will drive out all the shinplasters of neighboring States. The adoption of this amendment will also make it unnecessary and inexpedient to re-charter the present Bank of the State of Missouri, except for a limited period. We say this now in view of the adjourned session of the Legislature—in November next—and of the application of the Bank, by its friends, for a renewal of its charter. Such an application is now pending. But our deliberate opinion is, that the charter should not be extended further than is necessary to enable the Bank to wind up its affairs without oppressing the people, and to prepare them for the new and more liberal system of banking which is proposed to them. There are many reasons why this change should be made, but the first and most prominent is, that it will cut the State loose from all banks, give their management to those who have a direct interest in them, take from the Legislature a fruitful source of mischief and corruption, and induce a wholesome competition wherever banks may be located.

Our impression is, that the present Bank can be re-chartered for two years, giving it full time to wind up all its affairs, but more than this can hardly be asked with any hope of success. The Committee on Banks in the Senate, including Mr. Blow, from this county, are not disposed to extend the charter of this Bank for a longer period than we have named, and it will be the part of prudence to ask for nothing more. The adoption of the amendment to the Constitution will be of substantial benefit to the whole State—will give us a sound circulation—will furnish abundant banking capital—will induce competition among these institutions—and will be the means of giving help to enterprising men all over the State. Nothing more is wanted.—

St. Louis Republican.

The Law of Debtor and Creditor.—The Manchester Chamber of Commerce is moving upon this question. There are in the Manchester trade a considerable number of houses called agency-houses, which are in reality also mercantile establishments; and it has been found that in the present state of the law a manufacturer after invoicing goods to such agents may, in the event of their insolvency, in certain cases recover payment from the next purchaser of his goods, although this the third party may in fact have paid the so-called agents. The Commercial Association say, "That in all cases of buying or selling, whether through agents or otherwise, the invoice should be conclusive evidence of the right of possession in the property, and the symbol of ownership and liability; and any payment made bona fide on account of such invoice should be good and valid as against the principal, unless there is a special arrangement to the contrary expressed on the face of the invoice."

#### BANK OF MUTUAL REDEMPTION.

THE Legislature of Massachusetts has recently passed an act of incorporation of the "Bank of Mutual Redemption," authorizing the banks of the various New-England States to contribute to its capital. The following circular has reference to the establishment of a similar institution, under the general banking laws of New-York:

#### CIRCULAR.

#### Chittenango Bank, May 15th, 1855.

The undersigned take the liberty of submitting for your notice and consideration this circular, believing that it embodies remarks that merit the attention of every banker in the State, excepting those only whose notes are par in either New-York, Albany, or Troy.

Its object is to call your attention to a plan for the return of your circulating notes, that, in our estimation, would be preferable to the present system, inasmuch as it would be less expensive, less trouble-some, and much more systematic. We have given the subject embraced considerate thought, have calculated the bearings, and answered every objection that presented itself to our minds, only to become fully convinced that the plan, if carried into operation, would prove a desideratum long needed, and would enable you to control your circulation much easier than you now do. At the same time, your redemptions would diminish, and with them much of the expense attending, and lastly, though not least, would be found an infallible remedy against the demands and charges of would-be and fast-becoming monopolies.

That report, however, could not be safely taken as a guide, wherewith to ascertain the average circulation of those banks, it having been made at a time when most of the banks (consequent upon the contraction, which was necessarily, and had been for a long time going on) must have had on hand, of their own notes, much more than they ordinarily have. We believe that the average circulation of the New-York State banks, (aside from those whose notes are par,) for the present year, may safely be set down at \$20,000,000 and that every subsequent year will exhibit a marked increase.

With these statistics in view, the total amount of money redeemed per annum by those banks, can be ascertained with some degree of accuracy, together with the expense attending the same. If we allow (and we think it may be done) that this twenty millions of dollars is

necessarily redeemed six times a year, we discover the total amount of their redemptions to be \$120,000,000

The discount, consequently expense, on this amount at one fourth of one per cent, amounts to \$300,000

or if one eighth of one per cent is returned with your redemptions, as is generally the case, we still show an expense of \$150,000

which amount, being much more than is necessary for defraying the expense of that branch of their business, the banks receiving it must add largely to their profits, instead of which, nearly that whole amount might be saved to those banks now bearing the loss.

The effecting of this important change is the object more particularly in view, and yet in our further remarks, you cannot but discover many other advantages, and even sources of profit that would arise, were the following plan adopted, and it might be, no capital but action being required to bring about the desired object. We recom-

mend:

1st. That the New-York State Banks form an association, and establish, at some central point, an office which might properly be termed an "Office of Exchange for New-York State Bank Notes," adopting a constitution for its government and framing by-laws for regulating its business operations.

2d. That all the banks of such association send to such office, instead of eastward as they now do, all bank-notes excepting current

and foreign received by them.

3d. That it be the business of such office to receive, assort the same, seal and forward them to the banks where issued, respectively, giving credit for them without discount when received, and charging each day to each bank the amount of its own issues, found to have been received, sending them forward daily or as often as a package of \$1000 or more might be made up.

4th. That such office be the medium for the making of collections, it being required to receive all drafts drawn by one State bank on another, their certificates of deposit, also checks drawn by individuals on banks, etc., etc., disposing of the same in the same manner as are bank-notes,

always without charge or discount.

5th. That such office be managed by such competent and responsible persons as the association should select, such persons to be under the control of a board of directors, annually chosen by the association.

6th. The duty of such directors principally to be, to examine as often as deemed necessary into the books and affairs of such institution, and report in regard to the same, and to make a quarterly report, showing the expenses of the office, etc., and the amount of the same apportioned to each bank.

7th. That such expense be defrayed by the banks of such association, each paying an amount in the same proportion to the total expense, that the amount of the notes to their debit bears to the whole

amount received at such office.

Under such a system over \$300,000 of New-York State bank-notes would probably be received at such office, assorted, and sent home

every business day, and in such a manner as to give perfect satisfaction to all the New-York State banks. The entire expense of conducting the business of such an office may be estimated at an amount less than \$20,000, yet if we allow that it would reach that sum when we take into consideration the fact, that \$120,000,000 of bank-notes pass through such office in a year, by calculation we discover that a bank, with an average circulation of \$100,000, might have returned to them \$600,000, at an expense of less than \$100, whereas the cost of redceming that amount, at the one eighth of one per cent amounts to \$750, thus exhibiting a marked difference in favor of a reform.

We find this condensed form insufficient in portraying the advantages to be found in an establishment of that kind, while its disadvantages might be readily set forth in one line. Its convenience must certainly be acknowledged. The evident benefits that would arise are many, but as they will certainly present themselves to your

mind, we desire to mention but a few, and as follows:

It would give a free circulation to currency, and enable every bank to supply the demand for its circulation, to the entire amount of the same, regardless of the condition of their current account. But few of their notes would reach the eastern cities, and mostly what did would return in the same channel. It would prevent an accumulation of notes, with any of the regulating machines, and the subsequent redemption of them on illiberal terms, or the positive presentment and demand. It would establish for all that degree of independence now only maintained by keeping a stiff current credit.

It would greatly facilitate the making of collections, and render that branch of your business a source of profit, whereas at present, it scarcely pays its way, to say nothing of the labor. Through such an office, all collections being made without charge, whatever you received would be placed to your profits. It would also enable you to transmit for your customers, funds to any point, otherwise than with a current draft; a draft on such office being equally available, consequently worth as much in many cases to the individual. It would not in any way interfere with your current account, your eastern paper and foreign bank-notes being ample for selling exchange, also for redeeming what few of your notes might be presented, nor with your interest account, being entitled to receive the same rates from such office as you may now be receiving. And lastly, your proportion of the expense of such office, when compared with the amount now annually paid for transacting those branches of your business, would present so trifling a sum, that you would at once favor a plan that could substitute actual expense for unnecessary disbursements.

Further comments or remarks are unnecessary, and we would only add, that we have endeavored to present our remarks in their true light, and as brief as possible. We respectfully solicit your opinion in regard to them, as we do from all to whom we forward this circu-With unity of feeling and action, we see no reason why such a plan might not be adopted, to the certain benefit of all.

Yours, very respectfully,

D. H. RASBACH, A. W. BLYE.

# BANK-NOTE REDEMPTION IN NEW-YORK AND MASSACHUSETTS

PROCEEDINGS are on foot in this State for the adoption of such measures as will secure a par redemption of country bank paper for the State of New-York. Much has already been accomplished, through the agency of the Metropolitan Bank, in relieving the community of an onerous burden in the shape of a tax of § to § per cent on country bank bills. The New-England States have an aggregate bank circulation of about fifty millions of dollars, nearly every dollar of which is at par in Boston, and at all other places in those six States; whereas New-York, with a circulation of twenty-eight millions, submits to a tax of § per cent on a large portion of its bank bills, and this tax is confirmed by statute.

A Convention of the Banks of this State will be held on the 10th of July next at Syracuse, to consider what steps are necessary to secure a regular system of bank exchange, a sort of State Clearing-House. Whether this shall be done by a joint-stock concern, as in the case of the "Bank of Mutual Redemption," at Boston; or by a voluntary contribution on the part of the associated banks, is a point of inquiry.

Three things are essential: 1st, a well-considered plan of operation; 2dly, adequate capital; and last, (not least,) men of character to

manage it.

It is of importance to the bankers of our own State to adopt measures for the redemption of the bank-notes of Indiana, Ohio, Pennsylvania, and other States, so as to rid the community of a class of paper that is manufactured for the especial purpose of circulating in this vicinity and at remote points from the places of issue. The bankers of each State should provide a circulation for their own State, and thereby exclude (not incidentally but in bulk) the paper of other States.

In order to show what the Massachusetts Banks are about to accomplish, we give the proceedings of a Convention held at Boston on

Thursday, June 21st.

A meeting of the persons interested in the establishment in Boston of a Bank of Mutual Redemption was held at the Tremont House. There were some one hundred gentlemen present.

The meeting was organized by the choice of Hon. Alexander De Witt, of Worcester, as Chairman; and Pliny E. Kingman, Esq., of

Boston, as Secretary.

The charter granted by the last Legislature for the incorporation was read.

A Business Committee, consisting of Messrs. Jas. G. Carney of Lowell, G. W. Thayer (of the Exchange Bank) Boston, W. Bates of Westfield, Geo. W. Richardson of Worcester, James E. Gale of Haverhill, Franklin Ripley of Greenfield, Charles B. Hall of Boston, was appointed.

The list of banks was called over, and responses by delegates from

94 banks were made. Of these, 21 were from banks in Boston, and 73 from banks in Massachusetts.

The Business Committee then submitted their report in the form of three resolutions. The first to organize a Bank of Mutual Redemption under the Act of 1855; 2d, to appoint a committee of seven persons to address a circular to the banks of New-England asking them to subscribe for the stock; and 3d, when the subscription amounts to one million of dollars, the list of subscribers shall be handed to the chairman of this meeting, who shall take means to call a meeting of the subscribers.

A motion was made to accept the Report and adopt it. The question was ordered to be taken on the resolutions separately and the vote was ordered to be taken by year and nays.

Mr. Whittemore, of the Cambridge Bank, spoke in favor of accepting the charter with the understanding that amendments to the charter

should be sought when they were found to be needed.

The question of the power of these delegates to accept the charter, and to take further action, was discussed by several gentlemen, in the course of which it was said that the corporation had accepted the charter, and it is not material now who obtains the subscription of one million dollars, which it is necessary to obtain.

The first resolution was amended so as to say, "that in the sense of

this meeting it is expedient to organize," etc.

A gentleman from New-Bedford spoke against the charter as not being such as is wanted. He would rather wait until a better charter could be obtained.

Mr. Wood, of Fitchburg, said that they had a year in which to accept the charter. In the mean time, another Legislature will have assembled, and such amendments as are wanted may be obtained. He asked then, would it not be well to postpone action till then?

Dr. Gogswell, of Haverhill, spoke warmly in favor of the present system as conducted by the Suffolk Bank, and thought they had better

let well enough alone.

The meeting refused to take the yeas and nays on the different resolutions.

The vote was taken viva voce, and the resolutions were all adopted. To the first there were a few dissenting votes, but the majority was

very decided.

The following gentlemen were appointed the committee in accordance with the second resolution, namely: Messrs. Carney of Lowell, Whittemore of Cambridge, Ripley of Greenfield, Morgan of Springfield, Chadwick of Salem, Thayer of Boston, and Bates of Westfield.

The meeting then dissolved.

CONNECTICUT.—An act has been passed by the Legislature, at its present session, entitled, "An Act to authorize the business of Banking," repealing virtually the free banking law of 1852.

#### BANK OF BRITISH NORTH AMERICA.

Annual Report for the Year 1854-5.

THE nineteeth general meeting of this corporation was held Tuesday, June 5, at the offices, No. 7 St. Helen's Place, Bishopsgate street. There was a numerous attendance of shareholders, and the chair was filled by Oliver Farrer, Esq.

The Chief Clerk Mr. M'Nab, read the advertisement, convening the

meeting; and next the following:

Report of the Directors of the Bank of British North America to the Proprietors, at their Nineteenth Yearly General Meeting, on Tuesday, June 5, 1855.

The Directors stated in their last annual report that the profits of the Bank during the year ending 31st December, 1853, amounted to 100,650l. 17s. 10d., which they considered as affording satisfactory evidence "of a general extension of the business of the bank in every department."

The statement of accounts for the year ending 30th December, 1854, upon which it is their duty now to report, presents an amount of net profits very nearly approaching that sum, say 99,691l. 17s. 2d., but in reality representing the result of still more extended business, attended, however, from the peculiar state of the North-American trade, with an increased amount of doubtful assets, and requiring that, in addition to the sum written off for ascertained bad debts, a larger amount of reserve should be made to cover losses which may hereafter arise.

Notwithstanding the deductions which they have thus deemed it prudent to make, the balance of undivided profit remaining in the hands of the Bank on 30th December, 1854, after paying off the year's dividends, and the bonus declared at the last annual meeting, amounted to 140,041*l.* 7s. 2d., being an increase in the rest of 14,691*l.* 17s. 2d. over

that of the previous year.

Acting, therefore, on the principle they have heretofore avowed of increasing or reducing the distribution of profits as the state of the accounts from time to time may warrant, the Directors have great satisfaction in stating that they are now prepared to appropriate, in addition to the dividend at the rate of 6 per cent per annum, a portion of the undivided profits to the extent of 30,000%, being 30s. per share, or 3 per cent on the capital stock of the Bank.

It becomes now the painful duty of the Directors to advert to the death of their late much-esteemed friend and Secretary Mr. Attwood; and they feel that this cannot be more appropriately done than by inserting in this report the very words of the minute in which this me-

lancholy circumstance stands recorded in the proceedings:

The court met as usual on Tuesday, the 24th of April, and proceeded to the business of the day. The Secretary had begun to read the minutes of the previous court, when he was most suddenly arrested by the hand of death.

In recording this very solemn and melancholy event, the court would desire to express their deep sympathy with the bereaved family of Mr. Attwood, and the sincere regard which, collectively and individually, they entertained towards him.

"Mr. Attwood took part in the formation of this Bank, having been one of the original committee, and subsequently, on the 21st of No-

vember, 1836, he was appointed Secretary.

"During a period of nearly 20 years he devoted himself most assiduously to the duties of the office, exhibiting in their discharge a singular equanimity of temper and the most strict truthfulness and integrity."

"In his unexpected removal from the midst of them, the Directors feel that the institution has been deprived of the services of a valuable officer, and that they have lost the society of an esteemed personal

friend."

The Directors are strongly impressed with the conviction that the death of Mr. Attwood, under such peculiar circumstances, demands from the Bank more than the expression of sympathy and regret. Mr. Attwood devoted his life and talents to the Bank. The disease which removed him so suddenly from his family and from the Bank had for years rendered it impossible for him to provide for his bereaved widow and children by life insurance, which, under feelings of deep anxiety for them, he had frequently attempted in vain, and they are now without the means of support. The Directors have, therefore, determined to make this a special and exceptional case, and to recommend that out of the balance of undivided profits a sum of 2000l. should be granted for their benefit, and applied in such manner as, after consultation with the friends of the family, the Directors may deem best for their interests.

The Chairman rose to move the adoption of the report. The report which the shareholders had just heard read contained two statements of a very different character. The one was highly satisfactory and matter for congratulation; the other was of a nature which must excite the deepest regret and sympathy in the breast of every one who heard him, (hear.) He could have been well pleased, indeed, if any other of his brethren had filled the chair upon this occasion, because he was perfectly convinced that they would have brought the matters to which he had to refer more effectually and more lucidly and clearly before the meeting, (hear.) But when his respected colleagues expressed their wish that he should take the chair, he could not think it his place, because it was not his duty, to refuse to accede to their suggestion. He felt the less reluctant to take upon himself this office when he knew that any deficiencies of his own would be supplied by others around him. He began, then, with that which was very satisfactory to him, namely, to bring before the shareholders very shortly the position, progress, and prospects of their establishment; and he thought he might say that from its formation to this time the affairs of the company had never been in a more healthy and satisfactory condition. The shareholders would perhaps have observed that the net profits of the by-gone year were something like 1000l less than they were for

the year before. But he would beg to call to their remembrance the fact that the year before was what he called a go-ahead long year, when trade was in great excess, and that such years were generally followed by a reaction and by a diminution of business. But it had not really been so in this case, for, in point of fact, their business last year was more than it had been the year before, and the profits would have been considerably more if the Directors had not thought it fit, as prudent men looking to the state of trade in Canada, and the money pressure in New-York as collaterally affecting in some degree the trade in Canada, to lay by a larger amount to the indemnity fund, for it would be a short-sighted policy to show a larger amount of profit this year, which might be cut down in the next, (hear, hear.) He did not wish the shareholders to understand, that the Directors expected heavy losses, but it must be apparent to every one that with such extensions as the Bank had in every part of the colony it was impossible that such extent of business could be carried on for a length of time without some losses (hear, hear;) and he would without, hesitation state that they had at the present moment a larger amount of unpaid bills than they had at this time last year, and though provision had been made to meet any possible loss from this source by placing a large amount to the indemnity fund, they nevertheless showed a profit of 99,0001; and he would beg to draw the attention of the shareholders for the moment to the three last years' business, beginning with the year Their profits were then about 69,000l., and that was considered a good year, and the Directors were then enabled to pay to the shareholders a dividend of 6 per cent. Then they came to the year 1853, and in that year they made profits amounting to more than That was an enormous extent of profit; and that was the go-along year, and they might naturally have felt that the next year there would be a corresponding great extent of trade, but it was not After all, the net profit of the year 1854,—after deduction of all current changes, and providing for bad and doubtful debts, they still had 99,691l. 17s. 2d., so that really the profit for this year of the Bank had gone on progressing. It was also satisfactory to find that they had been enabled, not only to pay the dividend, but that last year they gave to the shareholders a bonus of 55s, per share, and yet they they found the rest increased, after those payments instead of being diminished. The Directors proposed this year to give to the shareholders a larger bonus of 30s. still having at the end of the year a larger rest than they had after the payment of the dividend in the previous year. In the beginning of the year 1853, making up their accounts to the last day of December, from the 1st of January, 1852, the amount of rest was 84,0981, and out of that they had paid their dividends. In the next year the amount of rest was 125,000l., and out of that they paid the dividends and the bonus, and the amount of undivided profit, after making these deductions, was 40,000l., so that they had now in hand sufficient to pay the two dividends this year and the bonus, and afterwards leave a rest in hand of upwards of 50,000l. He thought that that was a position which every body must think satisfactory, (cheers.) And he must here express his earnest hope that the shareholders would

always encourage the Directors to keep up this reserve; for let it be remembered that they had not in this Bank what was commonly called a guarantee fund; therefore they looked only to the reserve after the payment of dividends, and he hoped to see the Bank under that principle going on gradually and prosperously, (hear hear.) He hoped that the shareholders would urge upon the Directors, if that were necessary, though he did not believe it would be-but he would say, to encourage the Directors always to have in hand a full year's dividend, and a considerable surplus; in that case he would say the Bank must be in a wholesome condition, and such a system of action would give a permanency to the dividend, because, if unfortunately they should sustain a trifling loss, that fact would not necessarily diminish the dividend. His last advice to the Company was, to keep up the reserve to a large amount. He did not know that he need say much more, but he must say this much, that as far as this year was concerned the business of the Bank as far as they had advices, had, to a small extent, increased in every respect; but he could not say that throughout the whole year it would continue to be so. But it was at least satisfactory to know that things were progressing; and, looking to the improvements which were making in Canada, the extent of railways, which must ultimately be productive of the greatest possible benefit to the colony, and looking generally to the mighty progress going on in the colony, he thought they might be proud of having been the formers and founders of this establishment, (cheers.) He wished he could have stopped here, but it was his painful duty to advert to the loss which the establishment had sustained in the person of the late Mr. Attwood, their late Secretary, (hear, hear.) He assured the shareholders that a greater loss they could not have sustained a more excellent man, a more talented Secretary, or a more indefatigable, zealous creature than his poor friend never existed. He believed that his friends had put him there because he was acquainted with the late Mr. Attwood for as long, or a longer period than any one else present. He had attended the first meeting at which their bank was projected. Mr. Attwood was present as a committee-man, and when the Bank was established, he was appointed their Secretary; and from that day he had gained the confidence and approbation of the Directors. He was a young man of extraordinary talent, of great quickness, and of versatile genius. The hon, gentleman described in very powerful language the circumstances under which Mr. Attwood died. It appeared that he was acting in his capacity as Secretary at a meeting of the court, and that whilst in the act of reading the minutes of a preceding court he was struck with death, being at the time in apparent good health. The Directors felt they would have been unworthy of being the representatives of the shareholders if they had stopped at making a minute recording the melancholy circumstances of the death of Mr. Attwood. The widow was left with six children, two of whom were afflicted in such a way that there was no hope of their ever doing any thing for themselves; and the widow and children were left unprovided for. Hence arose the suggestion for the grant of a sum of 2000l. for the widow.

A proprietor said if it met with the wish of the proprietors generally, he should propose to add another 1000l.

The Chairman explained the delicate position in which the Directors were placed; they were afraid of saying too much or of saying too little

A discussion followed, the nature of which it would be bad taste to particularize, it being one purely relating to private and kind considerations as to the best mode of administering a fund to the bereaved widow and children.

The Chairman moved that the report be received and adopted.

Admiral Kelly begged to ask what was the amount which was laid aside to meet the probable amount of bad debts.

The Chairman replied that this year it was 13,000l. or 14,000l.

Mr. Borradaile thought the Chairman had dwelt too much on the fact of there being 99,000*l*. profit, as against 100,000*l*. in the former year; but it was to be borne in mind that a sum had been provided against contingencies amounting to 13,000*l*. or 14,000*l*.

After some further conversation the report was agreed to.

A resolution was proposed to the effect that the Directors be authorized to apply the sum of 2000*l*. out of the balance of undivided profits, for the benefit of the late Mr. Attwood's family, in such manner as they shall deem best, was then proposed by the Chairman.

A conversation ensued, each shareholder vying with the other as to the most delicate and discreet manner of applying this fund, etc., and

the resolution was carried with acclamation.

Mr. Barnewall, to avoid any misconception, explained that their undivided net profit at the end of the year was 140,000*l*.; if from that amount they took the dividend and bonus payable in July, 60,000*l*., that would reduce it to 80,000*l*. If they then took the dividend payable next December, say 30,000*l*., that would reduce the amount to 50,000*l*. They had 80,000*l*. after paying the present dividend. The retiring Directors, William Robert Chapman, Esq., Sir Andrew Pellatt Green, and John James James Cummings, Esq., were severally reëlected.

A vote of thanks to the Chairman and Directors was carried with great cordiality, and the Chairman briefly acknowledged the compliment.

The meeting then adjourned.

### MISCELLANEOUS.

New-Orleans.—The New-Orleans Commercial Bulletin speaks despondingly of the business interests of that city. It says:

"The unprecedented depression of business of every description, during the past season has set monied men to thinking. Communication with a large extent of country has been cut off by the low state of the rivers, so that goods packed a month ago still remain in store. Real estate has rapidly depreciated under heavy taxation, which drives away capital, and prevents a permanently resident population. The fall of city property within the last year has been surprising; greater, within a given period, than for many years."

As a remedy for the chief of these evils, the *Bulletin* calls for reform in the city government, the arrest of extravagance, and the breaking up of the iniquitous combinations of contractors and jobbers, that the depletion of the treasury and the increase of taxes may cease.

Maryland Bank Laws.—The act of Assembly of 1853 provides that no director or other officer of any bank in the State of Maryland shall borrow any money from the bank of which he is an officer, and if any director or other officer shall be convicted upon indictment of directly or indirectly violating this section, he shall be punished by fine and imprisonment at the discretion of the Court. Under the provisions of the above law, the grand jury have made a presentment against Charles R. Taylor, that he did borrow from the Bank of Commerce money, while he was president and director of said bank, in violation of said law; also, against Frederick Schumacher and Thomas G. Little, that they did borrow from the Bank of Commerce money, while they were directors of said bank, in violation of law. They also presented Charles R. Taylor and Frederick Schumacher, on the charge that "they did conspire to defraud the Bank of Commerce of \$4500," (by borrowing money from the Bank, it is supposed.)

LIABILITIES OF INSURANCE COMPANIES.—An interesting case touching the liabilities of insurance companies came before our courts recently in the suit of Harper & Brothers against the New-York Union Insurance Company. It will be remembered that the destruction of the establishment of the Messrs. Harpers was occasioned by fire, which was supposed to have originated in the room where rollers were cleaned with camphene. The company in question resisted the payment of their policy, on the ground that the use of camphene was prohibited. The use of camphene was merely incidental in the mechanical department, and, the plaintiffs contended, was not such a use as was intended to be prohibited. The jury sustained this view, and rendered a verdict of \$5478, with costs.

HOARDING MONEY.—Some day last week there was received at the Bank of Albany \$245 in five and ten dollar notes, issued by that Bank between the years 1814 and 1830. These bills were signed by Garret W. Van Schaack and John Van Zant. After the year 1830, none of the above-named bills from that plate were reissued by the Bank, and this fact being known to those now in the Bank an inquiry was instituted as to where they came from, and from whom they were received. It appears that they were in the possession of an old Dutch farmer residing in the southern part of the county, who obtained them prior to 1830, and from that time up to within a short period has retained them in his own possession. A son of the farmer a few days since came in possession of these bills, when he very wisely came to this city and presented them at the counter of the Bank for the purpose of ascertaining whether they were genuine or counterfeit notes. The bills looked as fresh and as bright as they did the day they were received from the engraver. For a period of at least twenty-five years this money has been hoarded up by its owner. Had he placed it out upon interest, even upon bond and mortgage, and made a proper disposition of the yearly interest money, intead of giving his son \$245, he could have given him nearly treble the amount.-Albany Journal, May 28.

N.B. All Stocks not specified as Bonds are transferable by inscription. All Bonds (except Hudson 1st and 31 Mortgage and Eric Convertibles) are payable to bearer. "\*" denotes Ex-interest or Ex-Dividend.

Banking in Cincinnati.—We are gratified to learn that W. Smead, Esq., proposes to reimburse, from his own means, all the female depositors of the Citizens' Bank, who, during its temporary suspension, were compelled by necessity to cash their claims at a discount. This generous measure is in accordance with the character of Mr. Smead. The man who could devote so much time and labor, and the sum of twenty-thousand dollars out of his pocket for the establishment of the "Widows' Home," and contribute so largely to all our charitable and public institutions, could not allow women to lose any thing by his bank.—Cin. Gazette, June 8.

About one in a thousand only of the banks which suspend, pay their debts and resume operations with untarnished reputations. It is a fact, however, that banking can be done with certain safety, without respect to any combination of adverse extrinsic circumstances, and there is no better evidence of this, than the stoppage, liquidation, payment of obligations without deduction, and resumption in full credit, by the "Citizens' Bank" of this city, owned by Messrs. Smead, Collard & Hughes. The reductions of its liabilities from \$1,800,000, to below \$260,000, in less than six months, without strain, loss, suit, judgment-liens, or attachments, is a financial feat worthy of especial mention in these degenerate days. The Citizens' Bank has proved its management to have been sound to the core; and it seems to be no more than fair, now that it has opened its portals again to all comers, published an accredited statement of its condition, and advertised a very large parcel of real estate for sale, that it should receive the confidence of the public Where there is ability and integrity, banking is as safe to all concerned, as running a steam-engine; both bank and boiler, however, always will burst, as indeed every business will, when incompetent or dishonest men hold the helm of affairs.—Cin. Times.

ENGLAND'S MINERAL WEALTH.—On the authority of Mr. Robert Hunt, Government Keeper of Mineral Records, the following statement is regarded as an approximation, very near the truth, of the annual value of our mineral wealth: Coal, as raised at the pit's mouth, £11,000,000; iron, £10,000,000; copper, £1,500,000; lead, £10,000,000; tin, £400,000; silver, £210,000; zinc, £10,000; salt, clays, etc., £500,000; giving the enormous total of £24,620,000. This is the value of the raw material. When the cost of labor employed in converting this mass of matter into articles of utility or objects of ornament is added, it will be swelled a hundred-fold.

### BANK ITEMS.

NEW-YORK.—Joseph Kernochan, Esq., Vice-President of the Fulton Bank, was, on Saturday, June 16, unanimously elected President of that institution, in place of John Adams, Esq., deceased.

Chartered Banks.—The charter of the old Greenwich Bank of this city, expired on the 1st June, with a capital of \$200,000, and accumulated profits (according to the last quarterly statement) of over \$63,000, or somewhat over \$31.50 per cent. The Bank has since been organized under the general law, with the same officers. The stock of the new association is selling at 121 to 123; the premium is, of course, based upon anticiated profits and not upon accrued profits.

Albany.—Andrew White, Esq., Cashier, has been elected Vice-President of the Commercial Bank, Albany; and Powers L. Green, Esq., succeeds Mr. White as Cashier.

Newark.—E. Allen, Esq., has been appointed Cashier of the Bank of Newark, Wayne county, N. Y., in place of L. McCarn, Esq., resigned.

Troy.—The Troy Budget learns that another bank is about to be organized in that city, and that it is proposed to have it located, for "up-town interests," on the site of the old freight-house on the Troy & Greenbush Railroad, at the lower junction of King and River streets. It is to be called "The Merchants' Exchange Bank"—so it is said. The books are now open for subscriptions.

Weedsport.—The Weedsport Bank, Cayuga county, has commenced operations. President, Lyman Soule, Esq.; Cashier, R. L. Mack, Esq.; capital, \$100,000. This town is situated about 155 miles west from Albany.

Canajoharie.—The Canajoharie Bank, in the village of Canajoharie, has commenced operations. President, Abraham N. Van Alstyne, Esq.; Cashier, Walstine Moyer, Esq. Capital, \$100,000.

Country Banks.—The following appointments have been recently made in the country banks of New-York:

| Location.    | Name of Bank.        | President.            | Cashier.               |
|--------------|----------------------|-----------------------|------------------------|
| Albion,      | Bank of Orleans,     | Henry A. King,        | J. M. Cornell,         |
| Cooperstown, | Otsego County Bank,  | William H. Averell.   |                        |
| Chester,     | Chester Bank,        | Jesse Bull.           |                        |
| Elmira,      | Chemung Canal Bank,  | Peter Tracy.          |                        |
| Herkimer,    | Agricultural Bank,   | Benjamin Carver.      |                        |
| Lowville,    | Bank of Lowville,    | William L Easton.     |                        |
| Newburgh,    | Powell Bank,         | Homer Ramsdell.       |                        |
| Rochester,   | Eagle Bank,          |                       | John H. Robertson, Jr. |
| Sing Sing,   | Bank of Sing Sing,   | Benj. Brandreth, M.D. |                        |
| Somers,      | Farmers & Drovers',  | Gerard Crane,         | H. M. Bissell.         |
| Troy,        | Manufacturers' Bank, |                       | Charles P. Hart.       |
| Tonawanda,   | Niagara River Bank,  | E. S. Prosser.        |                        |
| Watertown,   | Bank of Watertown.   | William H. Angel,     | Louis L. Angel.        |

MASSACHUSETTS.—The following gentlemen were appointed the committee in accordance with the second resolution adopted by the Bank Convention at Boston, namely: Messrs. Carney, of Lowell; Whittemore, of Cambridge; Ripley, of Greenfield; Morgan, of Springfield; Chadwick, of Salem; Thayer, of Boston; and Bates, of Westfield.

The Boston Journal thinks it is questionable whether the stock will be subscribed,

or the bank go into operation. It says:

"It is urged in favor of it that the banks may save a part of the interest they now lose on their deposits with the Suffolk, and make a good investment by taking stock in the new bank. On the other side, it is said that the new bank is subject to restrictions, can issue no bills under ten dollars, is compelled to take current bills at par, and is virtually subject to a tax of two per cent instead of one on its capital, as a large proportion of its stock must be taken by banks who pay one per cent on their present capital, and must pay the same on that of the new bank.

"It is understood that while the Suffolk Bank has made its system profitable, it employs sixty extra clerks to count the money, at a cost of sixty thousand dollars yearly, and it is doubtful if two systems of redemption were established, with the necessity of counting the bills at two places instead of one, if the whole profit will not be lost. It is, too, an open question whether a new institution, controlled by country banks who have interests of their own to subserve, will preserve as good a currency as an independent bank like the Suffolk."

VERMONT.—The Bank of St. Albans has closed its business, the charter having expired on the 1st January last.

Hyde Park.—The Lamoille County Bank, at Hyde Park, has commenced operations with a capital of \$75,000. L. H. Noyes, Esq., President; C. S. Noyes, Esq., Cashier.

Rhode-Island, namely: The Bank of the Republic, in Providence; the Slater Bank, in North-Providence; the Sowamset Bank, in Warren; the Farmers' Bank, in North-Kingston; the Ashaway Bank, in Hopkinton; the Tiverton Bank, in Tiverton; and the Franklin Five Cent Savings Bank, in Providence. In addition to this augmentation of bank capital, two banks in Providence, the American Bank and the Bank of Commerce, were each authorized to increase the amount of their stock from one to two millions of dollars. Books of subscription have already been opened to the stock of the Sowamset Bank and the Ashaway Bank.

Providence.—The Bank of the Republic has been organized by the appointments of Nathaniel A. Eddy, as President, and C. M. Howlet, Esq., as Cashier.

Bank Items.

North-Providence.—The Slater Bank (named after Samuel Slater, one of the early advocates of cotton manufactures) will commence business in a few weeks. President, Lewis Fairbrother, Esq., Cashier, James O. Starkweather, Esq. (We hope the Bank will have fair weather in its operations until the charter expires.)

PENNSYLVANIA.—S. C. Palmer, Esq., has been elected Cashier of the Commercial Bank of Pennsylvania, in the place of J. J. Cope, Esq., resigned.

Lancaster.—The Laneaster Savings Institution has failed, in consequence of the defaleation of the Treasurer. Capital, \$50,000; special deposits, bearing interest, \$466.588; transient deposits, \$77,494. The Examining Committee proposed to special depositors, to renew their certificates at 70 per cent of the principal, at one year, bearing interest at 4 per cent from July 1st next, and be renewed from year to year for three years. And to transient depositors they propose to pay at the same rate in cash, in three equal monthly installments. As security for the future safety of the deposits thus arranged, it is designed to ask the stockhelders to refill their stock, and thus renew the capital amounting to fifty thousand dollars.

Philadelphia.—The City Bank, Philadelphia, chartered at the late session of the Legislature, with a capital of \$500,000, has been organized for business, and A. M. Eastwick has been selected as its President, and Robert L. Martin as its Cashier. The charter requires the banking house to be located west of Sixth street, which, with the selection of officers, indicates that the institution will be favorably inclined to West-Philadelphia interests.

New-Jersey.—The State Treasurer of New-Jersey has declared a dividend of 90 cents on the Wheat Growers' Bank notes of Newton, and 65 cents on the Merchants' Bank of Bridgeton; he gives certificates for the balance, which we are assured will be paid at an early day with interest. The efficient course of the State Treasurer contrasts favorably with the course pursued by the Chancellor and his receivers in winding up the Commercial Bank, Perth Amboy, and People's Bank, Paterson. The Amboy Bank receivers have made two dividends after a lapse of four years, retaining many valuable assets in their hands. The receivers of the People's Bank, Paterson, have made but one dividend of 15 cents, which was paid three years ago; since then they have received upwards of \$30,000, which they have thus far withheld from the creditors of the Bank, out of which we presume the three receivers will draw their salaries for the whole time for their valuable services. The receivers of these broken banks are appointed by the Chancellor, who should for his own honor compel them to pay over all the funds in their hands, to whomsoever they are justly due.

Paterson.—The receivers of the People's Bank, of Paterson, give notice that a further dividend of twenty-two per cent on outstanding certificates issued by them, is payable at their office in Paterson, on the 25th inst.

Newark.—The stockholders of the Old Newark Banking and Insurance Company, will learn that the Directors have just declared the usual semi-annual dividend of 5 per cent, besides a dividend of 10 per cent from their surplus funds—both payable on the first of July. The whole amount of this dividend is \$76,297.50. This substantial old institution will thus pay its stockholders for the year the handsome sum of twenty per cent on their investments. The charter has been renewed—present capital, \$508,000.

NORTH-CAROLINA.—The Bank of Clarendon, chartered by the last Legislature, to be located in Fayetteville, will go into operation in a few weeks. Specimens of the notes have been received for the approval of the commissioners.

Wilmington.—The charter of the Bank of Wilmington has been secured. Over two hundred thousand dollars to the capital stock have been subscribed, and as

soon as \$50,000 are paid in, and ten days' notice given as required by the charter, the Bank will proceed to organize. It is expected that this amount will be collected in a few days. It will be some time, of course, before the institution can commence banking operations.

Bank Capital.—The capital of several banks in North-Carolina has been recently increased, namely: Bank of Wadesborough, present capital, \$270,000; Bank of Charlotte, \$300,000; Farmers' Bank of Elizabeth City, \$270,000; Bank of Washington, \$375,000.

SOUTH-CAROLINA.—I. W. Stokes, Esq., has been elected President of the Hamburgh Bank, in place of Hiram Hutcheson, Esq., resigned.

VIRGINIA.—A branch of the Farmers' Bank of Virginia has been established at Blacksburgh, Montgomery county, 212 miles south-west from Richmond, with a capital of \$100,000. President James R. Kent, Esq.; Cashier, W. H. Peck, Esq.

Ohio.—The charter of the Bank of Circleville expired on the 1st March, 1855. Messrs. W. W. Bierce, J. L. Franklin, and John Boggs, Jr., have been appointed Trustees to collect the assets of the institution and liquidate the remaining liabilities.

Georgia.—Dr. I. I. Robertson has been appointed Cashier of the Branch Bank of the State of Georgia, at Washington, in place of W. F. Alexander, Esq., resigned.

Ohio.—Several of the bankers and brokers of Cleveland have given notice that the issue of the stock banks from the old plate will be received only at a discount of five per cent. This movement is owing to the fact that the old plate was once stolen, and counterfeits numerously circulated, and the bills, both genuine and spurious, have become badly worn, and cannot be distinguished. The object is to drive home these issues.

The Legislature of Ohio, of late years, has been adverse to the banking interests, and has driven capital from that State to Indiana and elsewhere. The bank capital of Ohio is less than that of the city of Hartford, Conn., and is two millions less now than in 1850. The circulation has been reduced twenty per cent, and the loans, specie, etc., are likewise diminished.

Portsmouth.—Washington Kinney, Esq., was, on the 13th of June, elected President of the Branch State Bank of Ohio at Portsmouth; and Peter Kinney, Esq., was elected Cashier in place of M. W. Lodwick, resigned.

Indiana.—The commissioners appointed by the last Indiana Legislature to organize the new State Bank of Indiana, were in session in Indianapolis last week. They located branches at the following, among other places: Indianapolis, New-Albany, Fort Wayne, Madison, Connersville, Bedford, Lima, Lafayette, and Laporte. The amount to be subscribed at each branch for the purpose of its organization is \$100.000. After a sufficient number of branches are organized each appoints a member of the board of directors to manage the affairs of the whole. Each branch is mutually responsible for the liabilities of all others, and the stockholders are also individully responsible for the liabilities of all the branches. After the central board is organized, that board will authorize an increase of the capital of each branch to such an amount as may be deemed appropriate, within the limit prescribed by the charter, which authorizes an aggregate capital, not exceeding \$6,000,000, for all the branches.

Free Banks.—The Auditor of the State of Indiana notifies those holding the circulating notes of the Merchants' Bank at Lafayette, Merchants' Bank at Springfield, Green County Bank, at Bloomfield, Government Stock Bank, at Lafayette, Laurel Bank, at Laurel, Bank of Connersville, at Connersville, Wabash Valley Bank, at Logansport, Bank of T. Wadsworth, at Michigan City, to return the same to the office for cancellation on or before the 15th day of July next, that the outstanding circulation may be determined as accurately as possible and a pro rata dividend thereon declared. Certificates for the amount returned will be issued, and

the dividend on the respective banks paid upon the presentation of the certificates at the Auditor's office, after the 15th of August next.

Rushville.—The Bank of Ohio Valley has just been organized in this place, with a capital of \$102,000, to be increased to not exceed \$400,000. John J. Helm, President, and E. L. Rice, Cashier.

This is the first organization under the amended law, which requires at least eleven stockholders, the deposit of \$110 worth of State stock for every \$100 of circulation, with an additional real estate security of twenty-five per cent, making an access of security of thirty-five per cent.

WISCONSIN.—The capital of the Badger State Bank, at Janesville, has been increased to \$50,000. E. L. Dimmock, Esq., President, Henry C. Matteson, Esq., Cashier.

Canada.—Alexander Simpson, Esq., has resigned as Cashier of the Montreal Bank, his failing health rendering it impossible for him to fulfill, satisfactorily, the harassing and onerous duties of his office. Mr. Simpson has been for many years connected with the institution; and in losing his services, the Bank loses a valuable manager. David Davidson, Esq., of the Montreal branch of the Bank of British North America, has been appointed Cashier of the Bank of Montreal, to fill the vacancy caused by the resignation of Alexander Simpson, Esq.

NEW-YORK.—Bank Dividends Payable in July.—Bank of America, 4 per cent; Bank of Commerce, 4 per cent; Bank of New-York, 4 per cent; Bank of North America, 3½ per cent; Continental Bank, 4 per cent; Market Bank, 4 per cent; Mechanics' Bank, 4 per cent; Metropolitan Bank, 4 per cent; People's Bank, 3½ per cent; Tradesmen's Bank, 5 per cent; Seventh Ward Bank, 5 per cent; Atlantic Bank, Brooklyn, 10 per cent.

Baltimore Dividends for July.—Union Bank, 4½ per cent; Farmers & Planters' Bank, 4½; Citizens' Bank, 5; Western Bank, 5; Ocean Mutual Insurance Company, 3½.

### NEW PUBLICATIONS.

Currency or Money: Rs Nature and Uses, and the Effects of the Circulation of Bank Notes for Currency. By a Merchant of Boston. 8vo. pp. 112. Little, Brown & Co. Price, Fifty Cents.

This pamphlet is the result of many years' observation on the part of a practical mind. The author makes some valuable suggestions as to the condition of the currency, the value of paper money. We propose to defer any elaborate remarks on the subject to another No. In the mean time, the best service we can render to our readers is to give them the first chapter of the pamphlet, (see pp. 34 to 45.) Copies of the pamphlet will be mailed to order by Messra Little, Brown & Co., Boston, or by Appleton & Co., New-York.

The United States Insurance Gazette. June, 1855. G. E. Currie, 79 Pine street.

This work is intended to furnish information in reference to Fire, Marine, and Life Insurance, not only of our own city and State, but of other portions of the country. We have already extracted a valuable table from this number, showing the names, capital, and value of each of the Companies in this city. Those who wish to ascertain the names and capital of similar Companies in Boston and Philadelphia, will find in the present number ample details. The friends of the late Walter R. Jones, of this city, have contributed to this work a short biographical sketch of that gentleman, to record his character as an underwriter, a friend, and as a citizen—and his valuable services to the Atlantic Mutual Insurance Company, and

to other public institutions of New-York. Fire Pump. Art. III. Life Insurance. Art. V. Savings Banks of New-York. Art. VI. Reports of the City Fire Marshal, with a variety of articles on various subjects connected with Insurance.

There is ample room for such a work as the *Insurance Gazette*. It can be made the medium and repository of much valuable information to the underwriter and the merchant. We learn that the editor will soon add a legal department to the work, to embrace current decisions upon Fire, Marine, and Life Insurance points.

Banking Laws of Massachusetts—being a compilation of all the general statutes of the Commonwealth, now in force, relating to Banks, Banking and Savings Institutions, with notes, references to alterations in the statutes, abstracts of decisions of the Supreme Judicial Court, and quotations from reports of the Bank Commissioners. By WILLIAM A. RICHARDSON, Counsellor at Law.

This extended title explains the character of this work, which forms a neatly printed pamphlet of 82 pages. It will be found convenient for reference, especially as it is provided with a copious index, a great merit in a work of this kind. It includes the statutes of the present year, with one or two exceptions, relating to the subject. A certificate of the Bank Commissioners bears witness to the apparent completeness and value of the work. Published in Lowell by Messrs. Merrill & Metcalf. Boston: Sanborn, Carter & Bazin.

A Compendium of Mercantile Law. By the late John William Smith. Third edition. Greatly enlarged, and revised throughout, from the late English edition. By James P. Holcombe and William G. Gholson. 8vo. pp. 755. New-York: D. Appleton & Co.

A new edition of this standard treatise, prepared with reference to the latest American decisions, must prove highly acceptable to the American bar. There are few books in any legal library characterized by greater fullness, perspicuity, and accuracy. It is, what it purports to be, a complete compendium of mercantile law; treating thoroughly the subject of mercantile persons; mercantile property; mercantile contracts; and mercantile remedies. In the notes, great prominence has been given to the decisions in the Supreme Court of the United States, not only because of the intrinsic value of these decisions, and the eminent reputation of that Court, but in the just hope of their eventual reception by our State judiciaries as authoritative expositions of commercial law. The object in the present edition, more than ever, has been to make the book one of the greatest practical utility. The mechanical appearance of the volume is every way worthy of the publisher.

De Bow's Review, Industrial Resources, etc. Vol. 18, No. 5.

De Bow's Review for May contains the able article, by Mr. Garnett, of Virginia, upon the South and the Union; and Mr. McCord's elaborate review of British Emancipation; a short paper by Dr. Scott, of California; and a very full one upon Education by the Rev. Mr. Marshall, of Mississippi, in which new and striking views are presented to the South. Professor Forshey has a paper upon the railroad system of Texas, and the editor has one upon our new consular and diplomatic system.

The first article in the June number is by Mr. Garnett, of Virginia, on the "South and the Union." II. Diplomatic and Consular System of the U. S. III. Sources from which great Empires come. IV. Texas and the Topography of the Rio Grande. V. Negro Rule. VI. Agriculture and Horticulture. VII. Commercial Convention of 1855. VIII. Danish Sound Dues. IX. Antiquity of British Commerce. X. Internal Improvements. XI. Manufactures, Mining, and Internal Improvements.

The subjects treated of by the Review are such as to commend it to the close attention of every merchant and every statesman. The editor's residence at Washington enables him to compile successfully and with great advantage to his readers, statistical and other details of the first importance, from the public archives of the Departments. Matters of this kind should be published annually by the Government, as a sort of "Annual Register," or cotemporary history of the country. But in the absence of this, a monthly review as established by Mr. De Bow, the result of individual enterprise, is in part a substitute.

### Notes on the Money Market.

NEW-YORK, JUNE 28, 1855.

Ecchange on London, at sixty days' sight, 94 a 10 per cent premium.

The marked features in money affairs during the month of June may be said to be a greater cheapness of capital, and a slight tendency to speculation in stocks. The violent reaction in the money market last fall produced a decided reduction in the bulk of business in every department of trade. This is one of the inevitable results of a scarcity and high price of money. Business men will not pay high rates on loans for any length of time, and they will gradually and certainly reduce their business to such a level as will secure legitimate loans at fair rates.

The greater facilities now existing for obtaining leans on stocks has given an impetus to the market values of all public securities at the stock board. The solid State six per cents have nearly all advanced to par or within a fraction of it; and we think those few that are now quoted at a discount will be at a premium within two months from this time. Within the past ninety days Kentucky Six per Cents have advanced from 101 to 104. Ohio of 1875, from 107 to 114. Virginia, from 96% to 100 a 101. Georgia, from 97 to 100. Missouri, from 94% to 98. Louisiana, from 91% to 94. Railroad shares are getting more in favor, as it is well known that a thorough reform has been commenced, and will be maintained in the management of our leading roads, whereby their finances will be placed upon a more substantial footing as regards running expenses, floating and funded debts, and their business details generally. The market, although essentially changed from the features of last fall and winter, is still far below the quotations prevailing twelve months ago. Only one company shows a better price, and this is the Reading, being quoted at 98 against 76 a 78 in May, 1854. This advance is fully authorized by the improved condition of the company's affairs.

Western railroad shares meet with more favor than any others. The returns of the Michigan, Indiana, Ohio, and Illinois roads are conclusive as to their profitableness. During the past three months, Michigan Central Railroad shares have advanced from 70% to 103. Michigan Southern, from 91% to 109. Cleveland & Toledo from 77% to 93. Railroad bonds are also more in favor and bring more advanced prices; as will be seen by reference to our stock and bond tables on a previous page.

Some persons attribute this advance to a mere speculative feeling; but we think the grounds are more solid. It is mainly owing to the plethora of capital in this and other cities; the favorable condition of the banks of the city and State of New-York; the favorable prospects of the new crops of wheat and corn; and to a well-established conviction that railroad management is in better hands than formerly; and that more economy and discrimination will be practised in their behalf. The following flattering exhibit of railway traffic will confirm the advance now quoted in shares:

Holders of railway shares, (particularly those of the New-York & New-Haven Railroad Company,) will be gratified at the decision in the New-York Superior Court last week, establishing the

validity of the shares issued by Mr. Schuyler, which were repudiated by the New-Haven Company.

The decision of the General Term of the Superior Court was rendered in the case of the Mechanics' Bank vs. The New-York & New-Haven Railroad Company, to the effect that the Company were liable in damages measured by the market value of the stock at the time of the over-issue. Opinions were rendered by five of the Judges, Hon. Judge Duer declining to sit in the case, on account of personal interest in the result. Four of the judges agreed that the Company were fully liable, Judge Campbell alone dissenting, on the ground that the act of Schuyler in the over-issue, is parallel to that of the master of a ship signing fictitious bills of lading—a case adjudicated in the English Courts. In our next No. we shall re-publish the decision in full. The case will probably be taken to the Court of Appeals, and on that decision will rest the rights of some three hundred and twenty-three other holders of the so-called spurious stock.

It is reported that the State of Virginia has negotiated a loan in New-York of about a million, at a rate not less than par. Nearly one half of this amount has already been paid into the Treasury; and although the arrangements for the residue are somewhat conditional, no difficulty is apprehended in regard to its being paid in as fast as the wants of the State may require. It is also said the State is now paying promptly at the Treasury the warrants issued to the various internal improvement companies within her limits, whose works are now in progress, thus insuring the early development of her enterprises. The Treasurer of the Petersburg Road, a few days ago, received about \$31,000 from the Treasury on the last requisitions made by the Company.

The intelligence from California is to the effect that the business markets are becoming better established. Some few failures had occurred among commercial houses, but it is thought that business affairs will soon resume a more substantial shape. The arrivals of specie this week from San Francisco are fully two millions of dollars.

The movements of the banks and of the Clearing-House for the past eight weeks, are shown in the annexed table:

| Loans.                    | Specie.      | Cir-<br>culation. | Deposits.    | Clearings.    | Balances<br>paid. |
|---------------------------|--------------|-------------------|--------------|---------------|-------------------|
| May 5, 1855, \$93,093,242 | \$14,325,050 | \$8,087,609       | \$78,214,169 | \$118,865,653 | \$5,602,971       |

| June 23, 94,029,425       | 14,705,629   | 7,335,653         | 79,113,135   | 110,707,641   | 5,700,392         |

The mails from Europe bring letters containing fresh orders for American Securities from Paris and other cities on the Continent. At present, a preference is shown for State Loans, the ordinary rate of interest on which (namely, six per cent) is considered an ample remuneration for capital invested. The rates now prevailing for this class of loans are such as to invite liberal orders from European parties, who feel that all government loans throughout Europe are comparatively insecure. Austria is not only encumbered with a vast public debt, but her revenues are insufficient to meet the ordinary wants of the treasury. Spain makes no pretension to punctuality. She is heavily indebted to British capitalists for loans made during the past thirty years. Her bonds are now quoted at 36½ a 36½, and the price now falling. Portugal is in no better credit. Repudiation in its worst form marks her financial history, and her bonds, at four per cent interest, are a drug upon the market at 41 per cent. The stock that is the most consistent even in the English market is the Russian five per cents, which, under all the existing and unfavorable circumstances, are yet quoted at par.

The opinion prevalls among our monied men that there will be a large accumulation of capital in the Atlantic cities from Europe, should the present war be continued a year or two longer. There is an inherent principle of self-preservation, that applies to capital as well as to human life. Hence the readiness of capitalists to remove from an unsafe to a secure position. The United States offer not only a secure asylum, but a profitable one, for foreign capital; while the political and financial position of all Europe indicates that a severe revulsion in property values and in government funds is possible at a very short period hence.

Capital can be employed in this and the adjoining States, at eight to ten per cent without risk. These rates in themselves are drawing, and will continue to draw, vast capital from the continent of Europe, where three, four, and five per cent are considered a fair remuneration.

The latest intelligence from London is to the 16th inst., when consols were quoted at 91% a 92. Of the reduction of the rate in interest by the Bank of England and the money market, The Times of the 15th, says:

"The Bank of England to-day have reduced their rate of discount from 4 per cent, at which it had stood since the 3d of May, to 3h per cent.

"The measure had been so completely anticipated that, instead of causing any advance in the funds, it has led to realizations on the part of several speculators, who had recently made purchases under the conviction that it would occur. For a few days during the past week the probability of gold being required to be sent to Paris seemed to render a temporary delay probable, but a renewed tendency to an improvement in the French exchange has since manifested itself, and is further confirmed by the quotations received to-day. At the time when the last reduction was made it was thought that the rate of 4 per cent would probably be maintained for a long time, but the favorable turn which has subsequently occurred in the prospects of the harvest, and the repeated auccesses in the Crimea, have altered the whole aspect of affairs, and caused a rise of between 4 and 5 per cent in the funds. As regards any direct action on the money market, the reduction is not likely to have much influence.

"When the supply is beyond the demand, the Bank can never descend to any safe point without being underbid by other establishments; but in the present case, the general rates already prevailing among them are sufficiently low to prevent the necessity of the movement being met by any further action on their part. Paper of a choice description has for some time been freely negotiated at three per cent, and the probability is that, with some occasional exceptions, a stand will be made at that rate. The last period when the Bank rate of discount was as low as 8% per cent was between June and September, 1845.

"The builton then ranged between £17,000,000 and £18,000,000, and consols were about 93. The builton is now at about the same point, but the amount of notes unemployed is larger by more than £2,000,000.

"Consols opened this morning at the price of last evening—namely, 91% to 92 ex. dividend for the July account, and remained without alteration until the afternoon, when a supply of stock was brought forward, which caused a decline to 91% to %. This was the last official price, but at a later hour, owing to lower prices from Paris, there were sellers at 91%."

### DEATHS.

ATCHABLESTOWN, Mass, Tuesday, May 29th. in the seventy-fifth year of his age, Chester Adams, Esq., President of the Union Bank. He was nearly half a century an officer in different banking institutions in Boston. He had filled the stations of Interest Clerk in the Branch Bank of the United States; Teller in the New-England Bank; Cashier of the Manufacturers & Traders' (now Tremont) Bank. He was Cashier of the Union Bank for about twenty-five years, and has been at the head of the institution since the death of Samuel Fales, Esq., the President, some nine or ten years since. During all his long career he enjoyed the highest confidence and respect of the business community.

AT NEW-YORK, Sunday, June 10th, in the eighty-second year of his age, JOHN ADAMS, Esq., President of the Fulton Bank. In 1827, he was elected President of the Fulton Bank, being the third President of that institution. His predecessors were Robert Chesborough and David Leavitt. Mr. Adams continued President of the Bank up to the time of his death—a period of 28 years. Mr. Adams was also for 87 years Treasurer of the New-York Hospital, and for almost as long a period Treasurer of the American Bible Society. The marked features of Mr. Adams' character were strength of mind and unbending integrity, and his loss will be deeply felt not only in the family of which he was the honored head, but in the world of business, and by a wide circle of personal friends.

AT MARBLEHELD, Massa, Tuesday, June 19, aged sixty-one years, Samuel S. Thefrey, Esq., Cashier of the Marblehead Bank.

### BANKING HISTORY OF NEW-YORK.

THE LIVINGSTON COUNTY BANK, GENESEO.

WE have before furnished our readers with brief sketches of the Merchants' Bank, N. Y., Bank of America, Manhattan Bank, Bank of Albany, The Ontario Bank, Mechanics' Bank, N. Y., The Bank of Chenango. We propose to collect similar materials in reference to banking institutions of this and other States as fast as practicable, and place them on record.

It has been so customary of late years to read startling developments of treachery in fiduciary affairs, that confidence in the integrity of mankind has become seriously impaired. Like all other sins, we begin to look upon its commission not only without alarm, but with apparent indifference. This should not be. If every act of dereliction were visited with the extreme penalty of the law, crimes of this character would be far less frequent. The apprehension is not unfounded, that unless an effectual stop can be put to the defalcations of those to whom the custody of money is committed, the other extreme will be meted out to culprits—the utmost penalty of the bond and of the law will be enforced, and the voice of Mercy be drowned in the clamors of Justice for redress. True it is, that it is the instances of infidelity only that are brought to light, while the far more numerous instances of devotion to duty, and fidelity to sacred trusts, are hidden from the

knowledge of the world, and confined to those most immediately interested. No man deserves credit for the mere discharge of his duty: it is what he is paid for, if he be in the employ of others, and no more than is or should be expected from him.

When, however, we meet with cases of long, faithful, and earnest devotion to the interests of others, and of the successful management of a responsible and increasing business—the accounting not merely for the five or ten talents committed to our charge, but for the product in the use of those talents—we confess that it is not only consoling to the feelings, but it is due to the faithful steward to hear the welcome words of "Well done! good and faithful servant." It was, therefore, with no ordinary gratification that we have lately read an account of the satisfactory winding up of the affairs of the LIVINGSTON COUNTY BANK, located in the thriving village of Geneseo, N. Y. Starting twenty-five years ago, with a capital of \$100,000, and continuing during the whole period under the management of one President, and only three cashiers, in less than twelve years it re-paid to the stockholders the whole amount of their investments, in the shape of dividends; and during the entire period of its existence it has divided \$379,500, (or nearly four dollars for one,) besides returning the full amount of its original capital. Here is success, almost without a parallel; and what is the secret of this success? It relied not alone on the judgment and skill of those who managed it, but no less on their fidelity—"it has taken no bonds from any of its officers." If bank directors would look more into the characters and habits of their officers, and less to family influence, similar cases would abound everywhere, and bonds would be a mere formality, if not entirely dispensed with.

The charter of the Livingston County Bank was passed in April, 1830, and expired by limitation on the 30th of June, 1855, a period of about twenty-five years. Its history is now complete, and is a remarkable and an eventful one. Perhaps there has been no result—no finished and fully-arranged financial history—so well worthy of a record in that page of the annals of banking which shall delineate a career of prosperity, combined with integrity, sagacity, obedience to the law of charter, and the nobler law of honesty and honor. Success like that which we are to delineate, is a precious illustration of the close union of sound rule and safe result.

Its first cashier was Mr. Watts Sherman, now of the eminent house of Duncan, Sherman & Co., who, changing his place of residence in a few months, was succeeded by Mr. Stanley. After a few years, he resigned, and the present cashier, Mr. Cone, took the position. It has been a long series of years of faithful, honorable, honest service—the excellent citizen—the worthy man. And with him has been during this long period associated Mr. Colt, discharging his appropriate duties with like sagacity and fidelity. The bond of these officers has been their high character, and it has received neither forfeiture nor shadow.

The Livingston County Bank was chartered just at that period in our financial history when the value of the safety-fund system became apparent to those whose search had been after such policy as should

afford security to those who transact business with, and impose no arbitrary shackles on, those who conducted the business for the banks. Its charter preceded that era when there came a wild excitement concerning the value of such franchise, and when the unsound foot of political disturbance came into the area of business.

In 1830 there was no bank nearer the prosperous, the abundant, the superb valley of the Genesee, as represented by the pleasant village of Geneseo—which is placed upon the heights that overlook the fairest of fertilities—none nearer than the institution at Bath towards the south, and Rochester at the north, Batavia at the west, and Canan-

daigua at the east.

At the present time there are many within that wealthy area; but at that period the farmer and the mechanic and the merchant of the valley of the Genesee were compelled to travel a weary distance to procure the aid which became so necessary to sustain the quick life of labor and enterprise which then, even as now, pulsated amidst the

rich harvests and accumulating people.

The charter had been obtained, as the Legislature, better prepared then than subsequently, saw the importance of affording to such a people as those who cultured those luxuriant fields, all the facilities of business that wise laws could devise. It was not as a result, of course, that the stock should be all subscribed; for the capitalist might, with all his appreciation of the country, doubt the sure remuneration of his investment. A quarter of a century since, Geneseo was not, as now,

at the threshold of the great business marts.

The charter had not, as was the case with those of 1836, prescribed long lists of commissioners to distribute the stock. The rewards of political industry were as yet not within this circle. A few gentlemen, selected from among their fellow-citizens for integrity and honor, presided at the distribution. It lingered heavily during the day. The room of the Commissioners indicated none of those vivid movements which are now characterizing every avenue to profit. One after another of the people of the vicinage approached the experiment, and made subscription. It seemed as if the action of the Legislature had been premature, and that a bank was not needed here. There were those, however, who knew the value of the locality, and whose sagacity determined them to the belief that it was a most desirable opportunity for an investment, and they acted with well-matured efficiency of purpose.

These men were John Greig and Henry B. Gibson, of Canandaigua. They first, with unerring correctness of judgment, determined upon the man in whose charge the institution should be placed, Mr. Gibson, with his usual sagacity, opening the way; and as he had known Allen Ayrault as a merchant for several years, an interview with him was had, at which time it was agreed that if Mr. Ayrault would assume the management of the Bank, they were desirous of subscribing largely for the stock. But as Mr. Ayrault was one of the commissioners for receiving subscriptions and making a distribution of said stock, it was necessary for him first to discharge that duty to the public, and then, if an opportunity remained, it was determined to

embrace it. Messrs. Greig and Gibson, like wise men, stepped back till every possible facility had been given to the people in the immediate neighborhood to subscribe. It was not their manner to be found even in apparent conflict with the vicinage. When the evening of the subscription-day drew nigh, and the number of applicants for the stock seemed exhausted, they appeared and took the balance that remained, and thus secured the establishment of that bank whose history closes this day. It was a wise act in them—it was in each of them, one of a series by which their names are honorably known—and the enterprise has long, long since been abundantly rewarded.

The election of directors was immediately held, and they, without doubt or delay, made choice, as their President, of Allen Ayrault, under whose complete and entire control the institution has remained from the first to the last hour of its existence—a period of service in itself, from its unbroken duration, most remarkable in this country, and the record of which, for the attention to all the details of business, the capacity and clear comprehension of affairs, the obedience to law and requirement, the constant, assiduous, and valuable aiding and assistance to all who there transacted business, and, especially and remarkably, to those whose measure of relief, though important to them, was in itself small; and for the vast success demonstrating the wisdom of the management—a record which will form a most interesting chapter in the narrative of American banking.

Mr. Ayrault had been a merchant, and his qualification for a sound and superior financier had been discerned and appreciated by those who were willing to take a large proportion of the capital of the bank. It is rarely in this country that any one holds public position, even in business affairs, for a period so long. Mr. Ayrault, at the close of the quarter-century, returns his trust to his stockholders, with a history of success, the like of which it is seldom the duty of the annalist to record. And this success has been won by close, faithful attention to the just principles of legitimate banking, from which there was no departure into the unlawful or into the speculative. The capital was in constant motion; never neglected, never wasted. The institution recognized that it was placed where it was for the good of the people around, and while it did not neglect its own, it consulted their interest.

Nor is this record without its value as a tribute to the efficiency of that safety-fund system which, although passing away under the operation of law, in all its history, checkered as it has been by severe trials and heavy losses, before the registry, by reverses the result of the misdeeds of men, yet, with all this, will demonstrate itself to have been most valuable and useful.

The Livingston County Bank started right, and ended even as it begun. It, except in the suspension year, when prohibited by law, never passed its dividend—and that dividend, it is felicitous to think of it, never fell below ten per cent a year; was often, and for a long series of recurrencies, twelve per cent; sometimes fourteen; and, as the happy stockholders delight to recollect, was for successive years twenty per cent per annum. In this bank, dividend-day was a golden

point in the year, and it was perennial. It has scarcely had its parallel.

So soon did it become prosperous, so rapidly did the talent of its manager make itself apparent, that in eleven and a half years it had returned to its stockholders all its capital stock, with interest at 7 per cent, computed semi-annually. And the stockholders of this bank, with its one hundred thousand dollars of capital, had they placed out at interest their dividends as they received them, and accumulated them as principal and with interest, would on this day of the expiration of the charter have received, not only all their one hundred thousand dollars of capital, but, in addition, the vast accumulation of eight hundred and seventy-six thousand dollars. In its quarter-century it has paid its stockholders, in cash dividends, (besides the capital re-paid in full,) three hundred and seventy-nine thousand five hundred dollars.

These are the results of a perseverance in business, of close attention, of unwearied industry, but above all and beyond all, of an integrity of conduct, ever regardful of every interest committed to its trust.

The institution has held no government nor State deposit, it has taken no bonds from any of its officers, it has allowed no interest on deposits—it has gone through the ordeal of its five and twenty years with very few bad debts, with little litigation. It has paid its contributions to the safety-fund, not as an onerous tax, but as a cheerful tribute to a measure of protection. It has burthened itself with but just so much of real estate as the ordinary transactions of its business required, and has endeavored to be what public policy in its theory always intended by such creations—a financial institution, established for the benefit of the business interests of the surrounding country.

The following extracts we take from a report made to the Board of Directors on the 30th of June, by the Hon. Charles H. Carroll, chairman of the committee appointed to examine the affairs of the Bank.

The committee referred to report:

"That they have minutely examined each item of the statement as entered in the abstract book of the bank funds, on the 23d of June, 1855; that they have also carefully examined the abstract book of this day. From this abstract it appears that the whole assets of the Bank on this day amount to the sum of \$281,360.58, consisting of

```
      Specie and cash funds,
      $60,345
      19

      Bills receivable,
      219,015
      39

      Avails of banking house sold this day,
      2,000
      00

      ———$281,360
      58
```

It also appears by the abstract that the liabilities of the Bank amount this day to \$281,360.58, consisting of

| Bank-notes received from Supt. of Bank Department, \$    | 139,407 | 00               |    |
|--|---------|------------------|----|
| Bank-notes of old issue, outstanding,                    | 900     |                  |    |
| Individual deposits,                                     | 40,778  | 16               |    |
| Avails of the banking house sold by order of the Board,. | 2,000   | 00               |    |
| Capital stock, less bank house,                          | 98,000  | 00               |    |
| Discount, and profit and loss                            | 275     | 42               |    |
| ,                  |         | <b>\$281,360</b> | 58 |

In addition to this, since the 1st of May, 1853, there have been dis-

tributed to the stockholders of the bank, one hundred thousand dollars in dividends.

"The committee in reporting upon that part of the resolution which refers to the management of the Bank from its organization to the present time, have much pleasure in expressing the opinion that no bank in the country has been more ably or faithfully managed. The institution was chartered the 7th of April, 1830, commenced business the first of September, 1830, having been in operation a little short of a quarter of a century. Within that period it has paid to its stockholders in dividends, THREE HUNDRED AND SEVENTY-NINE THOUSAND FIVE HUNDRED DOLLARS; and in addition is prepared to return to them the original capital of one hundred thousand dollars unimpaired; in all, four hundred and seventy-nine thousand five hundred dollars. Or, as appears from an examination of the dividends paid with the interest thereon, the original capital with seven per cent interest semi-annually was paid back to the stockholders in a little less than twelve years, and that the dividends which have been paid subsequent thereto with interest semi-annually, would now equal FOUR HUNDRED AND TWENTY-FIVE PER CENT. Or, in other words, had the dividends all remained in the bank, accumulating with interest at seven per cent semi-annually, which there is every reason to believe they would have done, under the financial skill of its presiding officer, the Bank would now be worth to its stockholders nine hundred and seventy-six thousand six hundred and FIFTY-EIGHT DOLLARS AND FIFTY-TWO ONE HUNDREDIHS.

"Your Committee take pleasure in closing this part of their report, by quoting an extract from a letter to the President of this Board, from one of the stockholders, an eminent banker, now in Scotland:

"In reference to the closing of the operations of the Livingston County Bank, after its existence of a quarter of a century under your management—a bank managed better, as well for the good of the country as for the benefit of the stockholders, I do not think exists, or has existed in the country."

We also extract from the minutes the following resolutions offered by Judge Carroll, who has been a director of the Bank since its organization, deeming their publication but just to an officer who has so long conducted an institution of so great benefit to the public:

"Whereas, the Livingston County Bank which has been in eminently successful operation for a quarter of a century, is about to have its corporate existence terminated by the expiration of its charter; and whereas, its great success in bringing about results equal to, if not exceeding the results of any other banking institution, is attributable to the faithful and skillful management of its affairs by the Hon. Allen Ayrault, who has been since its organization its President and financial officer; and the Directors of said Bank, deeming this their last meeting a suitable time for putting upon its records the evidence of their appreciation of the services rendered by their said President, therefore, by the said Directors it is unanimously

"Resolved, That the said Allen Ayrault is entitled to the thanks of the stockholders of said Bank for his faithful and capable management of its affairs, and of the Directors thereof for the courteous and impartial manner in which he has presided at their deliberations.

"Resolved, That the position taken by Mr. Ayrault that he will receive no extra compensation for his services which, in our opinion so eminently entitle him to it, demands from us this expression of our appreciation both of the services above referred to, and of the position so assumed.

"Resolved. That the offer made by Mr. Ayrault for the outstanding stock of the Bank, was based upon a just appreciation of its affairs, which offer, as is evidenced by the correspondence exhibited to us between him and all of the principal stockholders, (they having been with the institution from its commencement and in a situation to know its affairs.) has met not only with a cordial approval and prompt acceptance, but has called forth the most satisfactory evidence that we have arrived at correct conclusions in regard to the justness and liberality of such offer, and we take pleasure in expressing the belief that, although the charter of the

Livingston County Bank expires this day, the 'Livingston County Banking Office' will continue to extend to the community the banking facilities so long and satisfactorily extended by the Livingston County Bank.

"Resolved, That these resolutions be recorded upon the book of minutes of the proceeding of said Directors, and a copy thereof, certified by the Secretary of this

Board, furnished to the said Allen Ayrault."

### The following resolution was also adopted:

"Resolved, That Ephraim Cone, the Cashier, and Charles Colt, Jr., Assistant Cashier of this Bank, have, by their fidelity, ability, and uniform courtesy to its customers, greatly contributed to its prosperity, and that they are entitled to the thanks of this Board for the aid they have rendered in preparing statements which have greatly aided in the settlement of the affairs of the Bank."

We might add, too, what we have learned upon good authority, that it held at one time seven hundred pieces of paper to cover loans of \$250,000; and two hundred and fifty of these were for sums of \$100 or less. Thus showing that the loans were made to business men of small means, benefiting the neighborhood in which it was situated, and not absorbed as is too often the case by the directors themselves for purposes of speculation or to exact a higher rate of interest from their needy customers.

And thus closes the history of the Livingston County Bank. The State of New-York may point to its career as justifying the wisdom of its legislation. The community, generally and individually, have felt in their prosperity its benefits. It has assisted, encouraged, sustained, and its President may well be grateful that a history so successful and so honorable is indissolubly blended with his own.

We learn that a private banking office called "The Livingston County Banking Office," in which Mr. Ayrault is largely interested, will occupy the building hitherto occupied by the Bank, with an active capital exceeding the capital stock of the late institution; therefore the agricultural, commercial, and manufacturing portions of the community of Livingston county will see that there is to be no curtailment in the banking facilities hitherto enjoyed.

The Bullion Robbery.—A robbery took place in June last, on the way from London to Paris, which was evidently perpetrated by persons who were acquainted with the extent and the mode of the consignments. A quantity of gold, in bars and American coins, amounting to between £13,000 and £14,000, had been deposited in three boxes, which were separately consigned to Paris from the bullion-brokers, Thomas, Bult & Speilmann, and were taken in the mail-train of the South-Eastern Railway, which set off from London at half-past eight o'clock on the evening of Tuesday, the 15th instant, to Folkestone; whence they were to be taken via Boulogne and the Nothern Railway of France, to Paris. When delivered in Paris, it was found that the three boxes had been opened and plundered, and then rehooped and re-sealed. It is rather remarkable that the depredators left in one of the boxes, between £6000 and £7000 worth of gold—it is conjectured, because they had not materials at command to supply what might have been the deficiency in weight. They had filled up that box with sporting shot Nos. 4 and 7, and the two other boxes were supplied with a quantity of shot sufficient to represent in weight the amount of gold abstracted from them. The French as well as the English police are engaged in the investigation.

### CURRENCY OR MONEY.

Remarks on Currency or Money: Its Nature and Uses, and the Fffects of the Circulation of Bank-Notes for Currency. By a Merchant of Boston. 8vo. pp. 112.

LITTLE, BROWN & CO.

### CHAPTER SECOND.

SKETCH OF THE HISTORY OF THE MODERN CURRENCY OF GREAT BRITAIN.

I. Charter of the Bank of England. II. First Issue of Five Pound Notes. III. Profits of Circulation. IV. Comparative Circulation of the Bank of England under Suspension and in times of Specie Payments. V. Extraordinary Rise in the Value of Property in Consequence of the Enlarged Bank Issues. VI. Contraction of Circulation after the Peace of 1815. VII. Losses from the Failures of 1818–19. VIII. Critical Position of the Bank of England in December, 1825. IX. Abolishment of One Pound Notes. X. Injurious Effects of Paper Circulation.

An examination of some portions of the financial history of Great Britain, and of the history of paper money there, may assist us in forming a correct estimate of the utility, as well as of the value and of the effects of paper money. In that country they have already gone through with the experience of paper money on the large scale. The results of it have been well known and recorded. Their bank statistics and tables of prices have been, from time to time, collected and published, both by public commissions and by private individuals. And the great concentration of their monied affairs in the Bank of England, presents a more marked and intelligible account of their progress than is to be found in the financial history of any other nation. The first charter of the Bank of England was granted on the 27th July, 1694, in fulfillment of a promise of the government to secure "certain recompenses and advantages to such persons as shall voluntarily raise £1,500,000 towards carrying on the war with France." The whole of the capital of the Bank, amounting to £1,200,000, was loaned to the government at 8 per cent per annum, and £4000 in addition was to be paid to the Bank annually, for its agency in the management of the loan. For the remaining £300,000, which had been subscribed to make up the required amount, the government issued obligations to pay annuities directly to the individual subscribers. This was the first permanent debt created by the government of Great Britain, for which it was only necessary to provide the annual interest, and it may be considered as the commencement of the national debt, which has ever since continued to augment. The notes issued by the Bank commenced the system of paper money there, being the first paper security that was used to

pass from hand to hand as money, except the receipts for more considerable amounts of coin deposited with goldsmiths in their capacity as bankers, which had for convenience been sometimes used in that

way among merchants.

At first, the lowest sum for which the Bank issued any of its notes was twenty pounds, equal to nearly one hundred dollars in the money of the United States; and this continued sixty-five years, until 1759, when bills were issued for ten pounds, that the Bank might more conveniently loan to government the necessary supplies of money to carry on the French war of that period. It was not until 1777, during the war of the American Revolution, that the Bank was allowed to issue notes of so small a denomination as five pounds, equal to nearly twenty-five dollars of the money of the United States. The object in reducing the denomination of notes, in each instance, was to aid the government in obtaining money to carry on expensive wars. Five pounds continued to be the minimum sum for which a note could be issued by the Bank of England until 1797, during the war against the French republic, when the Bank suspended specie payments. Then, in consequence of the depreciation of its notes as compared with specie, it became necessary, for the convenience of trade, to issue one and two pound notes, equal to only five and ten dollars of the money of the United States. These small notes were considered a temporary expedient only, to meet one of the exigencies of the suspension of specie payments. And, by the act passed in 1819 for the resumption of specie payments, the lowest denomination of notes issued by the Bank was again limited at five pounds, to take effect after May, 1823.

And here may be noted, in passing, how much the history of the currency of England, during the last century, has been connected with the history of America. The first issue of bank-notes in England of the value of ten pounds was to help the war, in which Wolfe climbed the Heights of Abraham, and ended his glorious career with the capture of Quebec and Canada, the same war in which Washing-

ton received his first lessons in the military art.

The issue of bank-notes for five pounds was first made during our Revolution, in which Washington acquired his immortal renown, and when the alliance with France, of which the motive was mainly the loss of Canada in the previous war, did so much to aid and to secure our independence as a nation.

This revolution of America planted the seeds which ripened in the revolution of France. Soon followed the long wars ending in 1815, which caused the Bank of England to stop payment, and to issue notes of one pound, the smallest paper money ever known in England.

It is argued by those who advocate the use of paper money, that, "during the suspension of specie payments by the Bank of England, though the bills of the Bank depreciated nearly twenty-five per cent, the shares of the Bank were worth nearly or quite one hundred per cent advance." This depreciation of its bills made no difference to the Bank. The public bore that loss; and, so long as the public was obliged to receive the bills and use them as money, the Bank gained

its interest on their circulation. It is not surprising that the profits of the Bank increased, with the unrestricted power to issue any amount of notes irredeemable in specie, or that the increase of profits should have been nearly or quite sufficient to double the price of the stock of the Bank, while there was not then even the check of convertibility to control the amount of paper money that the Bank could issue

Again, it is said that when the government authorized the Bank "to issue promises to pay money on demand, to be used for currency, it did not undertake to make them a legal tender for the payment of debts from one individual to another, or to compel its own creditors to receive them as money. The law left these bank-notes exactly what they were, promises to pay money. It made it lawful for the Bank to issue them to such persons as should choose to receive them; to be used for currency by such persons, and by such persons only as should choose so to use them." Is not this statement one of those ingenious sophistries, that are sometimes used to deceive the public? It is well known that individuals are compelled to use for money whatever currency is legalized and may be in general use. They have usually no choice about it. When paper money is authorized by a government, or even permitted, it must become the common currency of that country. The government, therefore, sanctions, and stringently, though indirectly, requires the public to use bank-notes for money, when it authorizes and sanctions the issue of them by the banks. In Great Britain, during the suspension of specie payments, laws were enacted to protect the banks against suits to enforce the promise of payment on their notes. The State governments in the United States have done the same thing under similar circumstances.

No one can doubt that the issue of paper money, to be used for currency, is profitable to a bank. It is most profitable during a suspension of specie payments; because the bank can then issue and keep in circulation larger amounts of it. It can also loan the whole amount, as it is not then necessary to keep any specie on hand for the redemption of the bills. When the Bank of England suspended specie payments in 1797, the amount of its bills in circulation was £9,674,780, equal to about forty-five millions of dollars in the money of the United States. At the close of the war in 1815, it amounted to £27,274,670, or about \$175,000,000. It must, of course, have been very profitable to the Bank to keep up such an amount of circulation; and it is not surprising that the value of the stock was nearly or quite doubled. But, in considering the public interest, it is more important to know what effect so great an increase of circulation produced upon the whole community, rather than how the few prospered who were stockholders of the Bank. The amount of the circulation of the Bank of England, during the suspension of specie payments, can be ascertained from official documents; but it is not so easy to know the extent of the circulation of notes by private and local banks.

English writers upon that period of the financial history of England assert, that soon after the suspension of specie payments, on the 27th

February, 1797, the continued advance of the prices of all sorts of merchandise, occasioned by the rapid increase of bank-notes in circulation, and the progressive depreciation of the currency by the great additions to it of this paper money, caused, with some few interruptions, "an appearance of growing and perennial prosperity amongst every class of the people, but the class of those who toil. No branch of industry escaped the delusive effect produced by this plethora of paper money. Enormous fortunes were made by contracts with the government for the supply of stores and provisions; but more particularly by government loans, in some of which the profits were so great that the gains on one might be, almost literally, said to be capable of affording the means for the next one." "All who dealt in money, capitalists, bankers, stock-jobbers, and speculators of every kind, and all merchants, manufacturers, and traders, were put in a position in which profit and wealth flowed in upon them." "While every thing else advanced nominally in price, in order to keep pace with the falling value of the inconvertible paper money, which was now being poured forth all over the kingdom, the wages of labor lagged behind, and the temptation to rob the poor was increasing." "For as the paper money swelled in amount, the prices and rates of every thing grew and rose apace; while the receivers of wages, the laborers, both agricultural and commercial, were gradually depressed, the rates of wages generally, not keeping pace with the advance in prices." "Money was drawn up into great masses in the possession of saving persons, while the laborers were turned over to the protection of the poor-laws." "It is certain, that up to the time of the accession of George III., in 1760, many of the rural population owned their cottages and gardens. After that time, the increasing difficulty of living caused them rapidly to disappear. The cottage of the grandfather was sometimes sold to provide maintenance for the pauper grandchildren. And, at the end of the war in 1815, little of this property of the industrious poor was left." "During the time that enormous fortunes were being realized by the trading classes," "those who do the labor of the country were gradually and silently being stripped of all hold upon a soil, which, were it not for them, would be worthless."

Such are represented to have been some of the effects produced by the progressive increase of paper money during the suspension of specie payments, which was so profitable to the Bank of England, that the stock of the Bank nearly or quite doubled in value.

It is well, however, to examine it still further, and to ascertain more particularly what effects were produced by the contraction, which must always follow, at some time, one of these inflations of

The quantity of paper money in circulation had been almost constantly increasing during the suspension of specie payments, and prices constantly rising in consequence of it. But, immediately after the peace in 1815, it was well understood that this depreciation of the currency would not be much longer tolerated. With the interruption of foreign commerce, occasioned by the war, some of the evils of such a condition of currency could be restrained. But the

revival of commercial activity, as soon as peace was declared, would have inundated the country with the products of foreign labor, which would certainly discourage domestic industry. Notice was given by the government to the Bank of England that the suspension would no longer be sanctioned, and that they must prepare for the resumption of specie payments. It was not, however, until 1819 that the act of Parliament was passed for immediate resumption. At the same time, all paper money of a smaller denomination than five pounds was forbidden, the prohibition to take effect after 1st May, 1823.

Much has been said and written respecting the extent of the depreciation of bank paper in Great Britain during the suspension of specie payments. It is difficult to define it precisely, but there is no doubt that at times, it considerably exceeded twenty-five per cent. quantity of paper money in circulation was constantly fluctuating, and at the same time the prices of gold and of property of every kind. Five pounds in paper was a common price for the ounce of gold; and light guineas, which could be openly sold, were legally worth more than those of full weight. Five pounds in paper was often paid for three and a half light guineas, because not being of the standard weight, they were not considered legal coin of the realm. Laws had been passed prohibiting, under penalties, the taking of bank-notes at less, or of coin at more, than their nominal value. The price of gold is not, under such circumstances, a correct measure of the depreciation of the paper money. The average price of wheat is perhaps the surest criterion by which to judge of the extent of the depreciation of the currency. From 1783 to 1794, the price of wheat in Great Britain averaged a trifle over forty shillings; and from 1808 to 1815 the average price was about ninety-five shillings. Since then, it has been more difficult to estimate the average price, for the purpose of comparison, in consequence of the corn laws, which were first passed in 1815; but, during the seasons of good crops since that year, in which the corn laws would be nearly inoperative, the usual price has been between forty-five and fifty shillings; and since the corn laws were repealed, in January, 1849, and all grains imported into England have paid only a nominal duty, the price of wheat has rarely exceeded fifty shillings, until the two last years, one of short harvest, the other of war.

One of the first troubles, which occurred after the peace of 1815, and in consequence of the preparations to restore the depreciation of the currency, was that of "plenty and cheapness." The people had looked forward to it as one of the greatest blessings of peace. Among their illuminated devices to celebrate the close of the long wars which ended in 1815, was a great loaf of bread and a foaming pot of beer, with the mottoes, "I am coming down," and "I am coming after you." But "this vulgar view of cheapness" was far from being agreeable to those who had been accumulating large fortunes during the period of high prices and speculation. The discounts of the Bank of England were reduced in one year after February, 1816, from twenty-three millions down to eight millions of pounds sterling. "This reduction of private loans answered two purposes of the Bank;

it kept the circulation within bounds; and, if it slaughtered the merchants and manufacturers, it brought about another novelty, a reduction in the price of gold down to four pounds the ounce, or nearly to the mint price, (£3 17s. 10;d.)" The consequences of it were, that the prices of all articles suddenly diminished to a ruinous extent. Distress and bankruptcy extended to every part of the country, and overwhelmed many of those who were withdrawn from trade, as well as those who were engaged in the active pursuits of business. In addition to the enormous numbers of merchants and others, of all grades and distinctions, no less than eighty-nine country banks became insolvent. The mercantile part of the community, however, after a time, began to accommodate their business to the new scale of prices and to the changed condition of the currency, and trade gradually resumed its usual course.

At the commencement of the suspension of specie payments, in 1797, the number of country banks in Great Britain was estimated at about two hundred. They increased rapidly, from year to year, until 1815, when the number was nine hundred and forty. This "enormous vegetation of banks," possessing the power to issue bills to be used for currency, must have produced a vast increase in the amount of the paper money in circulation during the suspension of specie payments. And it is rather a matter of surprise that they should have been so prudently managed that only about eighty-nine of them were made bankrupt by the contraction of the currency when the resump-

tion took place.

The petition of one Charles A. Thompson, for the redress of his losses, which was presented in 1823 to the House of Commons, by Lord Folkstone, and to the House of Lords, by Earl Stanhope, illustrates the effects produced by the change from a condition of currency which was so profitable to the Bank of England that its stock nearly or quite doubled in value. The petition stated, that some years before, during the suspension of specie payments, the petitioner, in connection with his father, had purchased two estates, one costing £72,000, which they paid for in money, the other costing £60,000, which was partly paid for in money, and the balance in a mortgage upon both of the estates. In consequence of the reduction of prices occasioned by the contraction of the currency to resume specie payments, both estates together would not sell for enough to pay the mortgage, and it had been foreclosed. The party from whom the estate was purchased for £60,000 had received £18,555 in money on account of it, and now, in addition to that sum of money, possessed both of the estates, which had cost £132,000. In consequence of this great change in the value of property, resulting from the changes in the currency, which were authorized and sanctioned by the government, he had become bankrupt. "His father had died of a broken heart, and he himself is a ruined man, with seven children of his own, ten of his brother's, and seven of his sister's all dependent on him. He imputes no intentional wrong-doing, but grievous error to the government; yet he hopes they will not change error into injustice by persevering in it;" and prays "for an equitable adjustment of his

own and other similar claims growing out of the changes authorized by the government in the currency of the country." This was only one of many thousand instances, which occurred at that time. Few of them were ever recorded, and nearly all are now forgotten.

The admirers and advocates of a cheap currency may say, that all the evils of this period, in Great Britain, were the consequences of the suspension of specie payments, and of the efforts to restore a depreciated paper money to par, as compared with specie. Therefore, they argue, that such examples can be cited only as objections to the use of an inconvertible paper money. This is a mistake. For the purpose of proving that such evils are not peculiar to incovertible paper money or to a suspension and resumption of specie payments, it may be well to notice some of the effects of the next great monetary crisis in Great Britain, the troubles of which commenced in the latter part of the year 1825, some years after the resumption of specie payments.

The act of 1819, providing for the immediate resumption of specie payments, prudently delayed the time of withdrawing from circulation the notes of a smaller denomination than five pounds beyond that fixed for the resumption of specie payments, so as not to increase the inconvenience of that measure. This allowed ample time to the banks to recall gradually the small notes, that specie might come in to supply the place of them. The country bankers were naturally reluctant to give up the profits which they had derived from issuing notes below five pounds. These had been mostly withdrawn from circulation, and both the public and the banks had prepared to have the law which forbade their circulation carried into effect. Taking advantage of the discontent caused by the restriction of the currency in consequence of the resumption of specie payments, they succeeded in inducing the ministry and parliament to sanction the circulation of them for an additional term. Early in the year 1823, and only a short time before the period named in the law of 1819 for rendering the small notes illegal, the act was passed by Parliament to authorize the banks to continue their circulation for eleven years longer.

The joy of the unreflecting portion of the public at this result was excessive. "Landlords, farmers, bankers, merchants, ship-owners, and tradesmen all joined in the universal exultation. They were not long in persuading themselves and each other that the sun of national prosperity was now risen, never to decline, never to be eclipsed again." Fortunately for the Bank of England, it would not take advantage at that time of the new law, but continued to issue no bills of a smaller denomination than five pounds. The country banks generally availed themselves of it, and inundated the currency of the country with an immense amount of small notes. Mr. Thomas Tooke, a celebrated writer on finance, in a treatise on the state of the currency, which he published in 1826, estimated the addition to the circulation at this time to have been not less than fifty per cent. All these notes in circulation were redeemable in specie, on demand; and were, therefore, always at par as compared with specie. But this did not diminish their effect in depreciating the currency. The immediate consequence of the great issues of paper money was a general rise in

the prices of property of every kind, and apparent prosperity in all branches of industry and trade. The importations of the products of foreign labor increased immensely, and, consequently, the revenue from duties on imported goods. At the next session of Parliament, in 1824, the Hon. Frederick Robinson, afterwards Lord Ripon, then Chancellor of the Exchequer, alluded exultingly to the great rise of prices that had occurred, the increased revenue, and "the matchless prosperity of the realm;" boasting of them as the result of the wisdom of the ministry in permitting the continued circulation of the small bills. This afterwards brought upon him the cognomen of

"Mr. Prosperity Robinson."

This apparent prosperity continued less than three years. Towards the autumn of 1825, strong symptoms of an approaching catastrophe began to be seen in the extravagant prices of many articles of common consumption. "The Bank of England had become alarmed as early as in July of that year, and began to draw in their notes by privately selling Exchequer bills. It was too late, however, to avoid a crisis." The enormous amount of imported goods must be paid for, and the bills drawn against exports were not sufficient for it. The coin of the country was, therefore, exported in large quantities. Under these circumstances, with a circulation of paper money convertible on demand in specie, the depreciation of the currency, and the high prices it occasioned, could not be sustained. As the demand for specie continued to increase, the banks generally became alarmed, and, in December, the panic commenced. It spread through the whole country. Great Britain and Ireland seemed to be one scene of confusion, dismay, and bankruptcy, worse even than had existed at any time during the process of resuming specie payments some years before.

Not withstanding that the Bank of England had foreseen the trouble, and commenced so early to prepare for it, even that great institution sustained itself with difficulty, and its coin was at one time reduced nearly to a million of pounds sterling. There was a probability of its being entirely exhausted of specie, when, as a temporary resource, the Bank availed itself of the law to issue small notes, having accidentally found in the Bank a box of the old notes for one and two pounds, which had been used during the suspension of specie pay ments, and happened not to have been cancelled.\*

Q. Was there a period in December, 1825, during which the Bank contemplated the probability of being entirely exhausted of gold? A. At the latter end of 1825, decidedly.

Q. Do you recollect the lowest quantity of gold which the Bank possessed during any period of December, 1825? A. I do not remember immediately; but it was miserably low.

<sup>\*</sup> The following evidence before the secret committee of the House of Commons, in 1832, was given by Mr. Jeremiah Harman, then one of the principal directors of the Bank of England.

Q. Was it under the sum of £1,300,000 you have named? A. Unquestionably.
Q. It was stated by the late Mr. Huskisson, that he, as a member of the administration at that time, suggested to the Bank that, if their gold was exhausted, they should place a paper against their doors, stating that they had not gold to pay with,

It is difficult to estimate the extent of the injury produced by this revulsion of paper money in Great Britain. It extended through the commercial world. In London, where the Bank of England alone issues notes for circulation, the failures among the bankers were few and less disastrous. But more than one hundred of the country banks failed, and countless numbers of merchants, manufacturers, and traders of every kind became bankrupt.

An act was finally passed by Parliament in 1829, to abolish all paper money in England of a smaller denomination than five pounds, equal to nearly twenty-five dollars of the money of the United States; but, in order to neutralize the opposition made to this measure by the Scotch banks, the small note circulation of Scotland was continued. This exception in their favor has undoubtedly been profitable to the Scotch banks. But, as their circulation is local, not extending beyond the borders of that country, the evils resulting from it are diminished. This currency of paper money of small denominations may account

partly for the poverty that exists in Scotland.

From this last-recited instance of the money crisis in England, of 1825, when the paper money had been redeemable in coin, as compared with the previously recited instance when the paper money was not redeemable in coin, an opinion may be formed of the effects and dangers of such fluctuations as occurred under those different circum-The only essential difference will be found to be, that with paper money convertible into specie on demand, the effects of a depreciation of the currency are more rapid and violent. The crisis will go through its different stages, from the high price and apparent prosperity of the inflation, to the decline of prices and real distress of the contraction of the currency that must necessarily follow, in less time than when the paper money is not convertible on demand. The resumption of specie payments was in 1819. Therefore that "necessary quality of a good currency," being redeemable on demand in specie, was not wanting to the paper money in circulation during the financial troubles of 1825.

but might expect to have gold to recommence payments in a short time; do you recollect such a suggestion? A. There was such a suggestion.

Q. What would, in your opinion, have been the consequence of that paper, placed against the door of the Bank, without preparation to support commercial and financial credit? A. I hardly know how to contemplate it.

Q. The Bank issued one pound notes at that period. Was that done to protect its remaining treasure? A. Decidedly; and it worked wonders. And it was by great good luck that we had the means of doing it; because one box containing a quantity of one pound notes had been overlooked, when the others were destroyed, and they were forthcoming at the lucky moment.

Q. Had there been no foresight in the preparation of these notes? A. None whatever; I solemnly declare.

Q. Do you think that the issue of these one pound notes did avert a complete drain? A. As far as my judgment goes, it saved the credit of the country.

### FRAUDS ON RAILROAD COMPANIES.

### DECISION OF THE NEW-YORK SUPERIOR COURT.

[This is a decision on an appeal in this case. The suit was to recover the market value, at the time of taking it, (being 94 per cent,) of eighty-four shares of the stock of the company, pledged to the bank by Alexander Kyle, Jr., together with some Harlem stock, in security for a loan of \$12,000. Two thousand dollars of the loan had been paid. The certificate of the stock had been issued by Robert Schuyler, the authorized transfer-agent, and signed by him. A regular power of attorney accompanied the certificate in the usual manner. After the discovery of the Schuyler fraud application was made by the bank to the company to transfer the stock on its books, but the latter refused to transfer, alleging that it was false and forged on the part of Schuyler, and made for his private purposes, and also alleging that on account of the fraudulent certificates or over-issues which existed, the books had been closed. The bank brought suit, and Judge Bosworth, at Special Term, considered that the company was liable for the amount, and gave judgment in the par value of the stock; and the present appeal was made.

The whole five of the Judges on the Bench gave opinions at length. Judge

Duer did not take any part in the decision.

The importance of the case of the Mechanics' Bank vs. the New-York & New-Haven Railroad Company is such to banking institutions generally, and to all classes of money-lenders, that we have concluded to place the opinion entire before our readers. As a precedent, it will be hereafter referred to; and as law, it will be probably confirmed by the New-York Court of Appeals.—Ed. B. M.]

The Mechanics' Bank, Respondent, against the New-York & New-Haven Railroad Company, Appellants.—Bosworth, J.—By the defendant's charter, its capital stock was limited to \$3,000,000, and was to be divided into shares of \$100 each. It declared that the shares should be deemed personal property, and be transferred in such manner and at such places as the by-laws of the company should direct.—§ 2.

It gives to the Directors "full power to make and prescribe such by-laws, rules, and regulations as they should deem needful and proper touching the disposition and management of the stock, property, estate and effects of said company," etc., and "the transfer of shares, the

duties and conduct of officers and their servants."-4, § 7.

Soon after the charter was granted, and in pursuance of it, by-laws and rules, in relation to transfers of and certificates of its stock, were adopted by the company, and they continued in force until after the 5th of July, 1854. They provided that the principal transfer-office should be in the city of New-Haven, but that transfer-agencies might be established, by resolution of the Board of Directors, in New-York and Boston, and that all transfers of stock at any office should be made under and in compliance with such rules and regulations, and by such instruments of assignment and transfer, as might from time to time be made, ordered, and appointed by the Board of Directors.

They provide that "certificates of stock shall be in such form, and issued under such rules and regulations as the board of directors may from time to time direct," but that after a certificate of stock has been

issued to a stockholder, no second or duplicate certificate shall be issued unless the same shall be lost or mislaid, and then only on a special resolution of the board of directors. That all transfers of stock at any of the offices of the company, shall be made in the transfer-books of the office at which the stock proposed to be transferred shall stand to the credit of the party to make the transfer. That if a certificate of the stock to be transferred had been issued, it must be surrendered before any transfer was made. That transfers might be made by the stockholders in person, or by an attorney appointed by a power of attorney in the usual form.

Soon after the organization of the company, and in 1846, Robert Schuyler was duly appointed its President and transfer-agent at the city of New-York, where a transfer-agency was duly established, and continued such President and transfer-agent up to the 3d of July, 1854. He was charged by the company "with the keeping of its transferbooks at New-York, and the making of the certificates of stock whenever any transfer thereof should be made by any former owner, and a new certificate therefor should be required by the transferee;" and he was invested, as such transfer-agent, with all the powers conferred by the charter, and said rules and regulations, on any transfer-agent of the defendants. Such certificates were of a uniform character, and were authenticated by no signature except that of "Robert Schuyler, transfer-agent."

On the 20th of April, 1854, Schuyler issued to Kyle the certificate in question, "which conforms to the defendants' certificates of stock, such as are admitted to be genuine, and such as they have been in the

habit of using."

On the 13th of May, 1854, the plaintiff loaned Kyle \$12,000 on his promissory note, and this certificate of stock, and an assignment of the stock named in the certificate, and a power to transfer it as collateral security. There was other collateral security, but it requires no comment. Kyle paid \$2000 of the sum loaned to him, and no more, and is insolvent. Prior to the first of January, 1850, the whole \$3,000,000 of stock had been paid in, and certificates therefor issued to the bona-fide owners thereof, who held them when the plaintiffs made their loan, and the certificate in question was issued. This certificate did not represent any of the genuine stock of the company, was not issued for any lawful purpose whatever, but was a fraud on the part of Schuyler, to raise money for his own private purposes. But the plaintiffs had no knowledge or notice of this, but on the contrary, made the said loan in good faith, without having any reason, when they received the certificate, to suppose that it did not represent genuine stock, or that it was not properly issued.

On the 5th of July, 1854, the defendant discovered that Schuyler had issued fraudulently, for his own private purposes, certificate of

stocks, amounting to over \$1,000,000.

The plaintiffs, before bringing this action, applied to the defendant, and presented at its transfer-office in New-York this certificate and the power of attorney annexed to it, and demanded permission to transfer the stock on the defendant's books, which was refused, on the ground,

among others, that the stock was spurious, and the certificate was false and forged. The plaintiffs further required the defendant to reimburse and pay to them the market value of 85 shares of their stock, which

the defendant refused to do, or to pay any part thereof.

Judgment was given, at special term, in favor of the plaintiffs for \$8072.68-100, the market value of eighty-five shares of defendant's stock, at the time such demand for reimbursement was made, and which is less than the amount due from Kyle to the plaintiffs on account of the said loan. From that judgment the defendant has appealed. There are other facts admitted by the pleadings, and specially found, but not necessary to be stated, in order to present, intelligibly, the questions upon the proper decision of which the affirmance or reversal of the judgment depends.

It must be conceded, as I think, that this certificate was utterly void

in the hands of Kyle.

The power of attorney annexed to it, and which is also an instrument of transfer, and which, by its terms, assigned to the plaintiffs eighty-five shares of the stock of the company, recited on it to be standing in Kyle's name on the books of the company, was ineffectual to vest in the plaintiffs title to any stock of the company, for the reason that Kyle owned none. He could not, by the mere execution and delivery of an instrument of transfer, convey stocks, or a right to stocks, when he had no right to any, either legal or equitable.

Whether the defendant is liable in this action, depends upon the question whether the issuing of such a certificate by its transfer-agent, under the circumstances under which this was issued, can create any liability against the company in favor of a bona-fide purchaser and holder of the certificate and of the stock which it declares is owned by the person named in it, and who transferred it to such purchaser.

The charter authorized as well the transfer of shares as the creation

of stock, and made the latter personal property.

In providing for issuing to stockholders certificates of their ownership of stock, the company would seem to have had in view the adoption of rules and regulations, the observance of which by their transferagent, would enable every stockholder to have nominal possession of authentic evidence of his title, and perfect security that his title could not be affected by any entries upon the transfer-book, until he had surrendered this authentic evidence or certificate of stocks, at the office, at which it had been issued.

The creation of such evidence of title and the observance by the transfer-agent of the rules and regulations of the company in relation to the transfer of the stocks which it identified or individualized, would enable the world to purchase, in perfect security of acquiring a title to the stock of which any stockholder, named in a certificate, was declared

by it to be the owner.

A transfer upon the books, and only such evidence of ownership as the entries upon the books would furnish, were all that the company needed for any purpose connected with the easy, safe, or profitable management of its affairs, unless it was deemed essential, in order to make its stock valuable, and an inducement to capitalists to become

stockholders, that a system should be adopted for the easy transfer of such property, and under which purchasers or dealers might buy or advance, upon evidence of title, to be furnished and authenticated by the company, upon which they might rely, and in which it was expected by the company that they would confide.

In 1846, the President of the company, and its highest officer in the eye of the law, was duly appointed its transfer-agent at the city of New-York, and continued to act in both capacities until after the transaction in question. He was the only officer authorized to issue certificates of the ownership of stock transferable at that office. The company's capital and property, and its income, were represented by thirty thousand shares, all of which, for aught that appears, and a large portion of which it is reasonable to presume, were transferable only at that office. Of the stock, transferable there only, no certificate of ownership could be issued, if the officer of the company to whom that business was confided did his duty, except to an owner of a part of the capital stock and upon an actual transfer of it to him upon the books of the company.

The appointment of Schuyler as transfer-agent, and devolving upon him the superintendence of the whole of this business, was notice to the public that the company, through this officer, would see that the rules and regulations which it had adopted for the security of dealers, as well as of the stockholders whom it represented, were observed.

Did the company thereby undertake that no certificates should be issued, except upon a full compliance with these rules and regulations? Or did some existing rule of law notify the world that if any one purchased upon a transfer of one of these certificates, in good faith, relying upon the facts being as it represented them to be, and without any knowledge or notice calculated to excite a suspicion to the contrary, he would buy at his peril, and must take the risk of the company having done its duty, and having acted in conformity with its bylaws?

The corporation could act only through the agency of officers. It is unlike a natural person, who can transact his business in person, or through the agency of others, according to his volition. All the acts in behalf of a corporation, done by its proper officers, are its acts, if they are done within the scope of their actual authority, or are apparently within the limits of their actual authority. The case is, I apprehend, the same in principle as if the by-laws required every certificate of ownership to be issued upon a special resolution of the board of directors, and this appeared upon its face to have been, and had been, in fact, so issued. If in the latter case, a bona-fide purchaser would acquire any rights against the company, had the same frauds been practised by the board, the same rights have been acquired by the present plaintiff.

The transfer-agent could, properly, have issued to Kyle the certificate in question, if the facts existed which the certificate states. He was the only officer who could issue and authenticate it. He was the officer delegated to superintend and manage this department of business, to issue such certificates to those entitled to them, and to deny them to

all others. To issue certificates declaring who was an owner of shares, and the number owned, was an important part of the ordinary duties of that office. There were thirty thousand shares, with respect to most of which, it is not unreasonable to presume, he was the only officer having any such power.

In issuing such certificates, he was acting apparently, within the limits of the authority conferred upon him by the company, under its charter, by-laws, rules, and regulations. In so acting, so far as the certificate speaks in relation to the matter, he was acting ostensibly and avowedly as such officer. On its face, it is the act of the corporation,

and not of Schuyler.

The plaintiffs took the certificate and loaned their money, upon the security of it, in good faith, without any reason to suppose that the certificate did not state the truth, or had been fraudulently issued. In point of fact, the certificate states a falsehood, and was fraudulently issued by the transfer-agent. Who must bear the loss resulting from ordinary dealings and transactions entered into, relying upon his fidelity—those persons who have parted with their money in this confidence, or those who appointed him, and held him and his official acts out to the world as worthy of credit and confidence?

It is urged, that the defendant is itself a person of limited powers, that every one knows it has no powers except such as its charter confers, that it has no capacity to create more than 30,000 shares of stock, or to make any share of a less nominal value than \$100; and that the transfer-agent in issuing this certificate transcended his powers, and did what his principal was incompetent to do, and that the act was fraudu-

lent and criminal and void.

It is obvious that the company could not, in the proper discharge of duty, or in the honest exercise of its powers by means of any agency it was competent to create, issue a certificate declaring Kyle to be the owner of shares of its stock when he owned no stock. That its duly-appointed officers had the actual capacity to do it, cannot now admit of any doubt; and having done it, the question is, Does liability attach to the company in consequence of it? Holding the company liable will not have the effect, upon such a state of facts as this case presents, to increase the number of shares of the stock of the company or diminish their nominal value. There is no question that the certificate does not represent any genuine stocks, [and there is no judgment that the plaintiffs had any right to be admitted or treated as stockholders.]

Compelling the defendants to pay the judgment may affect the actual, but not the nominal value of the shares. It would no more affect the nominal value of the shares, than a loss of the like amount by fire, or other casualty, and the company is competent to diminish the actual value of the shares, through such means, or by any negligence of its officers or tenants, while attempting to discharge their appropriate duties. Whether the company could have satisfied its liability to the plaintiffs by allowing a transfer to be made to them, on its books, of the eighty-five shares, when permission to make the transfer was de-

manded, is a point which was mooted, but not attempted to be discussed on the present appeal.

As it is wholly unnecessary to determine that question, in order to decide whether the judgment appealed from should be affirmed or reversed, I do not purpose to examine it in this action.

The principles applicable to this case are quite distinct from those which controlled the decision of Wright against Wilcox, 19 Wend., 345; Vanderbilt against Richmond Turnpike & Co., 2 Comst, 479; and many others of the same class to which we were referred.

Those were brought to charge the principal or master for tortuous or negligent acts of the agent or servant, by which a direct and immediate injury was caused to the person or property of the plaintiff. The actual wrong doer was visible and known to the injured party at the moment the wrong was done. The effort was to charge a party known at the time of the wrong to have had no actual participation in it, and

presumptively to have never authorized it.

In this case the act caused no immediate or direct injury. The act itself was one which he was apparently authorized to perform; it was performed in the name of the principal, and was one of a class or series of acts, precisely such, in kind and the manner of performing it, as he was appointed to do, with the expectation that others would give credit to them as being the authorized acts of the principal, and in consequence of giving such credit, would incur liabilities and part with their money and property. The plaintiffs have lost, by giving to the acts of the transfer-agent, apparently performed in transacting the very business with which he was intrusted, the credit and confidence it was designed and expected they should secure, and by dealing on the strength of that confidence, and according to the usual course of business, as it was designed and expected that the public in consequence of them, and in reliance upon them, would deal. They treated it, and advanced their money, believing it to be, as it purported to be, the act of the company.

In the other class of cases, the injured party was not influenced in his conduct by any act done or representation made by the agent in the name of, or professedly or ostensibly on behalf of, his principal. He was not injured by being influenced in his dealings by any apparent authority of an agent. He was injured directly and immediately by his wrongful act and without having done any thing himself, except to use ordinary care and caution to avoid him and keep beyond

the reach of his acts and their annoyances.

The acts of a general agent will bind the principal, so long as he keeps within the general scope of his authority. The principal is concluded by them. In judgment of law they are his acts. As long as the agent acts apparently within the limits of the authority actually conferred, and a third person, in parting with his property, does so, relying upon the honesty and propriety of such acts, and under circumstances not calculated to excite suspicion that the agent has departed from the instructions he received, the acts bind the principal, and the party injured by confiding in them, and acting upon them, as he

would have been authorized to confide in and act upon the credit of them if the agent had been faithful to his principal, may recover of the latter the damages suffered. This rule is applied and enforced to prevent fraud and encourage confidence in dealing.

Within the meaning of this rule, any agent is a general agent, whom

one appoints to transact all of his business of a particular kind.

Schuyler was authorized to manage and superintend the transfers of all shares of the stock of the company transferable at the office in New-York, and issue certificates of ownership to transferees. It is true that no by-law or resolution has been proved, which, by its terms, author-

ized the transfer-agent to issue certificates of stocks.

But the answer, in reply to averments contained in the complaint, admits that Schuyler was appointed transfer-agent soon after the company was organized, that he was charged with the keeping of its transfer-books at New-York, and the making of the certificates of stocks, whenever any transfer thereof should be made by any former owner, and a new certificate therefor should be required by the transferee, and that he had all the powers which any transfer-agent possessed under the charter, by-laws and regulations of the company.

By charging him with the duties, and by transacting this branch of business in this manner, without any interruption or variation, from 1846 to 1854, the company is as much bound by the acts of Schuyler as if he had done the same business, in the same manner, in pursuance

of a formal resolution.

By this mode of doing its business the company held him out as the person authorized to transact it, and worthy to be trusted, and in effect became responsible for his fidelity and good conduct in all matters

of the agency.

In Foster et al. against The Essex Bank, 17 Mass., 479, 511, in which it was decided that where a cask, containing gold, was deposited in a bank for safe keeping, and the cashier fraudulently took the gold out of the bank, the bank was not liable to the depositor. Parker, Chief

Justice, in delivering the opinion of the court, remarks:

"If it be asked, for what acts, then, of the cashier or clerk, the bank would be answerable, I should answer, for any which pertain to their official duty—for correctness in their books, and for a proper account of general deposits, so that if, by any mistake, or by fraud, in these particulars, any person be injured, he would have a remedy. "

The undertaking of banking corporations, with respect to their officers, is that they shall be skillful and faithful in their employments; they do not warrant their general honesty and uprightness."

Corporations are liable for the acts and frauds of their agents, while acting on the business intrusted to them, and apparently within the limits of the authority delegated to them, in the same manner as indi-

viduals.

But it is insisted that the plaintiffs, before loaning their money on the credit of the certificate, should have gone to the office of the company and examined the transfer-books, and then they might or ought to have discovered that Kyle was not the owner of any genuine stock.

Suppose the plaintiffs had gone there and found, under the date of the

29th of April, 1854, a transfer, in the proper book, to Kyle, and in proper form, of 85 shares of stock, and had inquired for and been shown a certificate surrendered at the time of the transfer, stating that the person making the transfer, owned that number of shares: would the plaintiffs then have had a right of action, if the event disclosed that the entry on the transfer-book and the surrendered certificate were equally fraudulent as the present certificates?

The answer does not allege that Kyle does not appear by the books of the company to be the owner of any stock, or that there was no stock of the company standing in Kyle's name on the transfer-book, but it avers that "there was none of its stocks, standing in his name, or in the name of any other person, which he was authorized to transfer." If, on inquiry, and being shown the transfer-books, he appeared by them to be the owner of eighty-five shares of stock, transferred to him in proper form on or before the day this certificate was issued, were the plaintiffs bound to prosecute their inquiries further, and if they were, and had done so, and had descried no defect of title, would the plaintiffs, by reason of having loaned on the security of the certificate, and after exercising such caution and in good faith, have acquired any rights against the company, if it should be established as it has been now, that the certificate was fraudulently issued, and represented no genuine stock?

If in such a case, the company would be liable, and in the present case is not, then its exemption from liability depends upon the want of proper caution on the part of a third person, in purchasing such a certificate, and does not rest upon the principle that it cannot be made liable, when it appears that its agent was guilty of such a fraud as is shown to have been committed by him in the present instance.

There is no pretense in the pleadings, nor is there any fact found to justify the inference, that according to the ordinary course of business, purchasers of stock, or those who loan on its credit, ever look beyond a certificate of ownership in the prescribed form of the company, duly authenticated by its proper officer. A delivery of that is taken, with an instrument in writing duly executed by the certified owner, which instrument is in terms both an assignment of the stock and a power of attorney, authorizing any one with whose name a blank left in the power of attorney may be filled, to transfer the stock to himself, on the books of the company.

Business of this kind has been transacted so long, and transfers of stocks have been made in this manner so extensively and uniformly, that the Court cannot but take notice of it as being a part of the business of the country, as well as of the manner in which it is conducted.

It has long been an object of the Legislature to give facility to the transfer of shares in government stocks and of those of incorporated companies. This facility of transfer is one of the advantages belonging to this species of property, and certainly adds something to the value which a commercial community would attach to it. This advantage would be destroyed, if a purchaser was required to look at the regularity of the transfer to all the several persons through whose hands such stock may have passed.

When there is nothing in the circumstances attending the sale of a certificate held by a person declared by it to be a stockholder, to induce a suspicion that it does not state the truth, or was wrongfully issued, a purchaser in good faith, and in the usual course of trade, has a right, as between himself and the company by whose officer it was issued, to rely upon the latter having done his duty, and having issued it in conformity with the rules and regulations which he was bound to obey. It was the company's duty, alike to its stockholders and the public, to see that the business of transferring shares was conducted in accordance with the jurisdictions of the charter, and the by-laws, rules and regulations which it had adopted. By appointing one of its own officers to take personal charge of and superintend that branch of its business, it represented him to the public, and his official acts entitled to credit, and undertook to be responsible for them, to those who might act on the faith of them, according to the customary mode of doing business.

The idea that this is an action to recover damages against the defendant, merely or substantially, on the ground that its agent had been guilty of a fraud, is not warranted by the allegations of the complaint. In an action seeking to charge a party merely on the ground of fraud, if there be no proof of fraud, the plaintiff can not recover. In this case, the right to recover depends upon the question, whether the issuing of the certificate to Kyle is to be treated as a corporate act, and whether the defendant is to be concluded by it, notwithstanding the proof given of Schuyler's fraudulent conduct in transacting the business of his

principal.

This certificate, so far as any inferences can be drawn from its terms or appearance, purports to be, and is, as much the act of the defendant as any certificate that has been issued by the company representing genuine stock. The plaintiffs took it, believing it to be what it purports to be, and their action is based upon the theory that, as between them and the defendant, it is, in judgment of law, the act of the defendant, and that the defendant is estopped from asserting the contrary, so far as the question of its liability for refusing to reïmburse to the plaintiffs the amount of their loan, to the extent of the value of the stock, is concerned.

If this certificate represented genuine stock, and the defendant had refused permission to the plaintiffs to have it transferred to themselves on the books of the company, an action of assumpsit would have lain against the company, for the refusal, at the suit of the plaintiffs, if actions had such names now as they bore prior to the Code. (Com. Bank of Buffalo against Kortright, 22 Wend., 348.)

Such an action is based on the contract or implied promise raised by law, that the company will perform all duties which are imposed

on it by law.

In this case the action is based on the assumption, so far as the right to be compensated in damages is concerned, that the company has given an assurance that Kyle owned the stock which its certificate represented stood to his credit on its books. The complaint states that the defendant refused either to permit a transfer of it on its

books, or to pay the plaintiffs the advance, or any part of the advance, made by them on the faith of the certificate of Kyle's ownership, alleging that it was fraudulently issued, and represented no genuine stock.

The plaintiffs, if they recover at all, do not recover nakedly on the ground that such a fraud has been committed, but in spite of it. They recover, if at all, not because the certificate does not represent genuine stock, but because although it does not represent genuine stock, the defendant is concluded under all the facts and circumstances of the case by the act of its transfer-agent and what was done by him in its act.

This action is not affected by the principle which controlled the decision in Hodges against The City of Buffalo, 2 Denio, 110; McGregor against The official Manager of the Deal and Dover Railway Company, (16 Eng. Law and Equity, R., 180,) and in other kindred cases. In these cases the plaintiff was party to a contract which the defendant had no power to make. The act of incorporation being a public act, the plaintiff was presumed to know the extent of the defendant's powers, and that the contract to which he was a party, was beyond the scope of the defendant's authority, and, therefore, illegal and void.

Neither is it affected by the rule applied to that class of cases in which the assignee of a contract sues a corporation, and the contract, though negotiable in its character, is upon its face one which the corporation is incompetent to make.

In all cases of the former character the contracting party, and in cases of the latter, every party into whose hands the contract may come in judgment of law, has notice that it is illegal and invalid.

In the present case there is nothing on the face of the certificate or in the circumstances under which the plaintiffs took it, to induce a suspicion that the agent had been unfaithful to his principal or that it was not a proper corporate act of the defendant, performed in the rightful discharge of its duty.

One taking a bank-note in the ordinary course of business, which had been fraudulently issued by a cashier, after the whole amount limited by law had been issued and was in circulation, would have as much ground to suspect that the issuing of it was not an honest corporate act, as the plaintiffs had to suppose the issuing of the certificate in question was not such an act.

Can there be any doubt about the right of the holder of such a bill to recover upon it, if the bank refuse to redeem it? Is there any more doubt of the right of the plaintiffs to recover in this case?

I think the judgment should be affirmed on the grounds:

First, That in issuing the certificate, Schuyler was acting within the scope of his powers as transfer-agent, and the issuing of it was, in judgment of law, the act of the corporation.

Second, That by intrusting to him that department of business, and holding him out to the world as the officer by whom the company would transact it, it represented his official acts to be entitled to credit, and became responsible for his fidelity in that employment.

Third, That any person to whom certificates of stock, issued by

such officer in the usual form and authenticated by him in the usual manner, are offered for sale, is through them assured by the company that the facts are as they represented them to be, and is as much authorised to purchase, relying on the truth of that representation, as a merchant is to sell upon the representation of a third person, that the vendee is worthy of credit.

Fourth, That a purchaser in good faith for value, and in the ordinary course of business, of such a certificate, although it proves to have been fraudulently issued, is entitled to recover his damages of the company, if they refuse to permit a transfer of the stock, or to reimburse to the purchaser any part of his advance, and that he cannot be charged with having been negligent, or with a want of due caution, in having trusted to the certificate of the proper officer, without further inquiry, when there was nothing in the circumstances under which the stock was offered to him, or relating to the person offering it, or to the amount of the stock so offered, justly calculated to excite the suspicion of a prudent and cautious man, that the officer of the company had departed from his duty in issuing, or that the holder had been guilty of any improper practice in obtaining it.

Judge Campbell next gave his views. He considered that the company is not liable, that the amount of stock could not be enlarged by the company, and therefore could not be by the agent. The whole matter rests upon the allegation of fraud. In regard to the idea of contract, Kyle was not the owner of any stock; the certificate was merely a cheat and a lie—it was a fraudulent document by which he procured the money, and for that the agent himself (and not the company) is personally liable. In order to make the principal liable, a knowledge of the fraud must be brought home to him; it must be shown to have been the act of the principal and not of the agent.

A case of this kind is analogous to that of the captain of a vessel signing false bills of lading—bills of lading in some measure are transferable. The captain is in a general way the agent of the owner, yet the latter is not liable for false bills of lading so signed. Judge C. cited decisions in England to show this to be the rule. He considered that the plaintiff was not entitled to recover, and the judgment should be reserved.

Judge Oakley (the late Chief Justice) then presented oral remarks. He said that he would confess that the conclusion he has come to is not entirely satisfactory to himself. He considered that the duty of transfer-clerk should not be to issue certificates, but to see that the old certificates had been surrendered and the transfers properly made. The answer was admitted that Mr. Schuyler was fully authorized to issue certificates of stock. The Judge said that he had been much impressed with the arguments of his brother Campbell as to the owner of a vessel not being liable for fraudulent bills of lading of the captain.

The Judge concurred with the majority of the Court, and said an order would be entered confirming the judgment at Special Term, with costs.

# BANK STATISTICS.

# STATE OF NEW-YORK.

The following is a summary of the condition of the banks of this State at various periods since February, 1853:

| •                      | <i>,</i>                     |                       |                       |

| Union Bank in City New-York,    | 125,000         | 146,745                | 180,860     | 112    |
| Total banks,\$8                 | ,812,291        | \$5,343,436            | \$5,457,555 |        |

The individual deposits, according to the weekly bank statement of 10th
March last, were. \$77,259,489
According to the quarterly statement, 54,756,029

A difference of \$21,503,460

This latter sum was consequently the amount held to the credit of the country banks. As a general rule it will be found that the loans are equal to the capital and circulation and one half of the deposits combined, namely:

| Capital,                       | \$48,000,000 |
|--------------------------------|--------------|
| One half deposits,\$76,000,000 | 38,000,000   |
| Circulation,                   | 7,000,000    |
| Loans,                         | \$93,000,000 |

#### NEW BANKING LAWS.

#### I. Connecticut.

An Act with regard to Sundry Banks organized under the Act of 1852, entitled, "An Act to authorize the Business of Banking."

## Approved June 16, 1855.

Be it enacted by the Senate and House of Representatives [of Connecticut] in General Assembly convened:

- § 1. That the several banks in this State, organized and established and now in operation under the provisions of the "Act to authorize the business of banking," passed in the year 1852, shall continue to be incorporations for the purposes for which they were established, under the names, for the terms, and with the locations severally provided in the certificates of said banks, as deposited in the office of the Secretary of the State, in the same manner as if said corporations had been severally established by special resolutions of the General Assembly, and with all the powers and privileges, and subject to all the duties and liabilities hereinafter expressed. Provided, that no such banking company shall take the benefit of this Act, unless on or before the first day of January, 1856, at a meeting of the stockholders of such company, regularly called for the purpose, such company shall vote by a majority of two thirds of the stockholders, voting by shares of stock, to accept the provisions of this Act, a copy of which vote, certified by the president and cashier of such bank, shall be deposited with the Secretary of the State, and a like copy for record with the town clerk of the town in which such bank is situated, and unless said banking company shall, on or before said 1st day of January, 1856, pay into the Treasury of the State a bonus of two per cent upon the amount of the capital of such banking company for the uses of the State Treasury. And thereafter, all the provisions of said Act of 1852 shall cease to have any operation upon said bank, except as hereinafter provided.
- § 2. Said corporations shall have power by their said several names, to purchase, hold, sell, and convey all kinds of property, real and personal, to sue and be sued, to have and use a common seal, and to make and carry into effect all such by-laws and regulations, as may be expedient for the proper management of the affairs of said corporations, not repugnant to the provisions of this Act, the laws of the State, or the laws of the United States.
- § 3. The capital stock of said corporations severally, shall be and remain of the same amount as now established. Each share of stock shall be one hundred dollars, and the same shall be transferable in such manner and according to such rules as shall be prescribed by the by-laws of such corporations.
  - § 4. The times of holding the annual meetings of said corporations,

the number of directors, the mode of electing directors and presidents, the powers and duties of said officers, and the mode of calling meetings of the corporations, shall be the same as are now legally prescribed by the certificates of said corporations, as recorded under the provisions of said Act of 1852, and by the by-laws of said companies. The present officers of said corporations shall retain their offices for the terms for which they were elected, in the same manner as if this Act had not been accepted by such corporations. The directors of such banks shall all be residents of this State. They shall administer the affairs of the companies, appoint a cashier and other necessary officers, and shall require sufficient security for the faithful performance of their duties.

§ 5. The directors may determine the amounts and times of paying dividends from the earnings of such banks, but the same shall be taken only out of the profits of the business. Only the legal rate of interest shall be taken by such companies upon discounts or loans.

§ 6. All rights of property and all legal obligations and liabilities of such corporations, shall remain in full force and shall not be affected

by this act.

Ē.

t

§ 7. The bills and notes of said corporations, signed by the presidents and countersigned by the cashiers thereof, promising the payment of money to any person or order or bearer, shall be obligatory on the corporations according to the tenor thereof, and shall be assignable according to the custom of merchants and the laws relating to inland bills of exchange, and all negotiable notes duly executed, may be indorsed by the said corporations in the same manner as by individuals, and said corporations may in the same manner sue thereon; but said corporations shall not issue such bills or notes to an amount exceeding at any one time fifty per cent above the amount of capital actually paid in, and for the payment of all bills and notes (exceeding such amount) the presidents, directors and cashiers shall be personally responsible.

§ 8. In case of the failure of any of said corporations, the holders of the bills or notes of such corporations, of the denomination of one hundred dollars and under, shall have a lien on all the estate of such corporation of every description whatsoever, and on all monies held

by such corporations on deposit.

§ 9. Said corporations shall not trade in any thing except bills of exchange, gold or silver bullion, or the sale of goods pledged for money lent and not redeemed in due time, or in houses or lands necessarily taken for security of debts previously contracted.

§ 10. All stocks, bonds, and other securities now in the hands of the State Treasurer, and belonging to said corporations severally, shall be holden by said Treasurer as security for the outstanding bills and notes of said corporations, originally secured thereby, until such notes and bills are surrendered to said Treasurer to be cancelled; and the plates, dies, and other materials for the printing and making of notes and bills for such corporations, shall be delivered by said Treasurer to the corporations to which they respectively belong, whenever such corporations shall have deposited with the Secretary of the State, a

certified copy of the vote required by the first section of this Act; provided, that whenever any such corporation shall have surrendered ninety per cent of its bills and notes, the Treasurer may deliver the remainder of said securities, on receiving from such corporation a bond, with satisfactory security, in double the amount of such unredeemed bills, that the same shall be paid if presented to said bank, at any time within two years thereafter. All notes so delivered to the Treasurer of the State shall be destroyed, and after such securities are so delivered, no such corporation shall reïssue any bills certified by the Register of the State that may come into its possession, under a penalty of five times the amount of the bill so reïssued. And all securities holden by said Treasurer shall, until so delivered, be held by him for the same purposes, and with the same rights and duties with regard to the same, as under said Act of 1852.

§ 11. All general laws, heretofore enacted with regard to banks incorporated by special resolution of the General Assembly, shall be

applicable to the corporations described in this Act.

§ 12. No new association shall hereafter be organized or established under the provisions of the Act to authorize the business of banking,

passed in the year 1852.

§ 13. The General Assembly may at any time, at its own pleasure, reseind, annul, or modify the power of any banking corporations which shall take the benefit of this Act.

#### STATE SUBSCRIPTION TO BANK STOCKS.

Be it enacted, etc.: That all banks and banking associations organized under the Act of 1852, authorizing the business of banking in this State, shall, in addition to the number of shares authorized, be open to subscription from the funds of this State, the School Fund, or from the funds of any college, ecclesiastical society, school corporation, or association for charitable purposes, within this State; which stock, so subscribed, shall not be transferable, and may be withdrawn at any time on giving twelve months' notice to the Bank. Provided, that such additional subscriptions shall in no case exceed 10 per cent of the amount of the capital stock of any bank or banking association, actually paid in, any law or usage to the contrary notwithstanding. Approved, June 26, 1855.

# BANK CIRCULATION.

Be it enacted, etc.: § 1. No incorporated bank, or banking association in this State, shall at any time be indebted by its bills or notes, or have its bills or notes in circulation to an amount exceeding in the aggregate twenty-five per cent above the amount of the capital stock of such bank or banking association actually paid in.

§ 2. No such bank or banking association shall make any loan or discount, or in any way give credit to any individual, company, or corporation, where, by such loan, discount, or credit, the party receiving the same shall become liable to such bank or banking association, in connection with liabilities already existing, to an amount greater than fifteen per cent of the capital stock of such bank or banking association actually paid in.

- § 3. No such bank or banking association shall directly or indirectly loan its bills or notes for circulation to any person, persons, or corporation, under any agreement that such person, persons, or corporation, shall protect the circulation of such bills or notes, and redeem the same.
- § 4. No bank or banking association shall take or receive, directly or indirectly, by including exchange or otherwise, on any note, draft, or bill of exchange, a greater rate of discount or interest than six per cent per annum, to be calculated according to the standard laid down in Rowlett's Tables. Provided, that exchange not exceeding half of one per cent may be charged for checks, drafts, or bills of exchange on New-York, Boston, Providence, and Albany, and at the customary rates on other places, where the party getting the loan or discount requests such check, draft, or bill of exchange. Provided further, that each bank or banking association may take and receive the current rate for collecting notes, bills, or bills of exchange, payable at any other place than where the same was discounted.

§ 5. The loans and discounts of any such bank or banking association to individuals, companies, and corporations, out of this State, shall not, at any one time, exceed in the aggregate one fourth part of its capital stock actually paid in, bills in circulation, and monies on de-

posit at the time.

§ 6. The cashiers of all such banks and banking associations, shall, on the first Monday of January, April, July, and October, in each year, or within ten days thereafter, make out and deliver to the bank commissioner, a particular and detailed statement of the condition of their respective institutions, exhibiting the resources and liabilities of the same; which statement shall be subscribed by the cashier, or president, verified by oath, and published in a newspaper in the county where such bank or banking association is located.

§ 7. If any such bank or banking association, or the directors or officers of the same, shall violate the provisions of this act, such bank or banking association shall forfeit and pay to the Treasurer of this State, for the use of the State, a sum not less than one thousand dollars. And such directors and officers shall be individually liable and responsible for the redemption and payment of all the bills of such bank in circulation, above the amount authorized by the first section of this act.

§ 8. It shall be the duty of the bank commissioners to examine the several banks and banking associations in this State, with special reference to any violations of the laws relating to banks and banking, and to report to the General Assembly any such violations as they may discover, with the names of the banks guilty of such violations.

§ 9. The act entitled, An Act relating to Banks, passed May session, 1854, and all other acts and parts of acts inconsistent with the provisions of this act, and such provisions of any charters of banks as limit the amount to be loaned to any one individual, company, or corporation, to a sum less than fifteen per cent of the capital stock of such banks actually paid in, be, and the same are hereby repealed.

§ 10. This act shall take effect on and after the 1st Monday of October, 1855.

Approved, June 30, 1855.

# An Act in addition to an Act entitled, An Act in relation to Banks.

Be it enacted, etc.: § 1. That there shall be appointed by the General Assembly, three persons, to be styled Bank Commissioners, who shall have the powers and perform the duties now specified in the aforesaid "Act concerning Banks," and who shall hold office for the term of three years; provided, however, the first-named of the three commissioners first appointed, shall go out of office at the end of one year, and the next-named at the end of two years, and the last-named at the end of three years, and so on in rotation afterwards, each commissioner at the end of three years; and no commissioner shall be reappointed to enter upon the duties of this office, until at least one year after the expiration of the term of his appointment. Provided, the Governor may fill all vacancies that may occur during the recess of the General Assembly; and the commissioner or commissioners so appointed by him, shall hold office untill the next session of the General Assembly.

§ 2. All acts and parts of acts inconsistent with this act, shall be,

and are hereby repealed.

§ 3. This act shall take effect from and after the day of its passage. Approved, June 28, 1855.

An Act in addition to an Act passed at the present session of this Assembly entitled, "An Act with regard to sundry Banks organized under the law of 1852, entitled, 'An Act to authorize the business of Banking.'"

Chapter 14.

Be it enacted, etc.: That the bonus required to be paid into the State Treasury by the banks hereafter organizing under the provisions of the act entitled, "An Act with regard to sundry banks organized under the act of 1852, entitled, 'An Act to authorize the business of Banking,' approved June 16, 1855, be paid by such banks in the manner and at the times following, to wit: one per cent upon the amount of the capital of such banks, respectively, on or before the 1st day of January, 1856, and the remaining one per cent on or before the 1st day of January, 1857, all provisions of the aforesaid act relating to banks to the contrary notwithstanding: provided, that each of said banks shall pay a bonus on the whole amount of the capital stock of said bank, either paid in or subscribed for, at the time the bill to which this is an addition shall go into operation.

Approved June 30, 1855.

An Act belating to the Duties of Bank Commissioners.

# Chapter 15.

Be it enacted, etc.: That so much of the "Act concerning Savings

Approved June, 1855.

# An Act to amend the Charter of the Connecticut Bank. Chapter 16.

Be it enacted, etc.: § 1. So much of the charter of the Connecticut Bank as provides that no person shall be eligible for director therein for more than three years out of four, be, and the same is hereby repealed.

§ 2. This act shall take effect from and after its passage.

Approved June 16, 1855.

An Act relating to Subscriptions to Bank Stock by Ecclesiastical Societies and others.

# Chapter 17.

Be it enacted, etc.: That in all cases when any person, corporation, association, charitable, or other institution, or any other party is, by any existing law or by the provisions of any charter, authorized to subscribe to the stock of any bank or banking association in this State, at its par value, and at their election withdraw such subscriptions or shares so subscribed, such subscription shall not entitle such subscriber or shareholders to any portion of the earnings or accumulated surplus over and above the capital of such bank, on hand at the time of such subscription, any law or usage to the contrary notwithstanding.

An Act in addition to, and alteration of, an Act entitled, "An Act authorizing the establishment of Savings and Building Associations."

#### Chapter 18.

Be it enacted, etc.: § 1. That three fourths of all monies received by savings and building associations, either as stated payment of installments on stock, or as deposit or otherwise, shall be loaned to stockholders holding such number of shares of stock as when full will equal the amount loaned; and all such loans shall be secured by mortgage on unencumbered real estate situated in this State.

§ 2. The bonus on loans made to stockholders as provided in the preceding section, shall in no case exceed twenty-five per cent on the amount loaned, when taken for the whole time for which said loan is made, and one half of one per cent per month when taken monthly.

§ 3. No bonus shall be taken on any temporary loan, exceeding one half of one per cent per month, and no loan of any kind shall be made by said savings and building associations, to any person except bona-fide stockholders, at a greater rate than six per cent per annum.

§ 4. All installments of stock in said savings and building associations, shall be payable at the rate of one dollar per month upon each

and every share of said stock, but the same may be made payable monthly or yearly, as the by-laws of the company may direct.

- § 5. Any savings and building association, whose officers or directors shall knowingly violate, or permit to be violated, either or any of the provisions of either section of this act, shall forfeit and pay to the Treasurer of this State, a sum not less than five hundred dollars for each and every violation thereof; and it shall be the duty of the Attorney for the State, in each of the several counties of the State, to prosecute every violation of this act, in their respective counties, and any person residing in this State may prosecute any such violation in his own name, one half of which forfeiture shall be for the use of this State, and the other half for the prosecutor.
- § 6. All acts and parts of acts inconsistent herewith, are hereby repealed. This act shall not take effect until the 1st of January, 1856.

Approved June 29, 1855.

#### An Act for the Prevention of Counterfeiting.

#### 1855. Chapter 168.

§ 1. Whenever any false, forged, or counterfeit bank-bills, or notes, or any plates, dies, or other tools, instruments, or implements used by

counterfeiters, or designed for the forging or making of any false or counterfeit notes, coin, or bills, shall come to the knowledge of any sheriff, constable, police officer, or other officer of justice in this Commonwealth, such officer shall immediately seize and take possession of the same, and deliver the same into the custody of the Court of Record, having jurisdiction of the offence of counterfeiting in the county in which the same shall be; and the said court shall, as soon as the ends of justice will permit, cause the same to be destroyed by an officer of the court, which officer shall make a return to the court of his doings in the premises.

§ 2. Whenever the charter of any bank in this Commonwealth shall expire, or become forfeited, or whenever any such bank shall close its business for any cause whatever, the members of the board of directors of such bank, which shall have last been in office, shall forthwith deliver up all their plates and dies to the Court of Record in the county in which such banks shall have been established, having jurisdiction of the offence of counterfeiting; and such court shall cause the said plates and dies to be disposed of in such manner as the court shall deem expedient, in order to prevent their being afterwards used for any unlawful purpose.

§ 3. Any member of such board of directors who shall wilfully neglect or refuse to comply with the requirements of the preceding section, shall be punished by a fine not exceeding five hundred dollars.

§ 4. This act shall take effect from and after its passage. [April 10, 1855.]

# As Act in addition to an Act for the more equal Assessment of Taxes.

# 1855. Chapter 220.

§ 2. If the cashier of any bank, the treasurer of any savings institution, or the clerk or secretary of any insurance company in this Commonwealth, shall refuse or neglect to make the returns required in chapter one hundred and ten of the acts passed in the year one thousand eight hundred and forty-nine, entitled, "An Act in addition to an Act for the more equal Assessment of Taxes," or falsify such returns, he shall forfeit the sum of fifty dollars for every such offence, to the use of the city or town in which such shareholder may reside, to be recovered by the treasurer of such city or town in any court of competent jurisdiction. [April 21, 1855.]

#### An Act in relation to Savings Banks.

#### 1855. Chapter 294.

§ 1. No savings bank in this Commonwealth shall be allowed to invest more than ten per cent of its deposits, nor in case such per centage amounts to one hundred thousand dollars, more than one hundred thousand dollars of its deposits, in the capital stock of any one corporation.

§ 2. Any savings bank in this Commonwealth that may have invested a larger amount of its deposits than is expressed in the foregoing section, in the capital stock of any one corporation, shall reduce the same to the limits in said section named, within twelve months after the passage of this act. [May 3, 1855.]

## An Act relating to Savings Banks and Institutions for Savings.

1855. Chapter 361.

Any money deposited in any savings bank or institution for savings, in the name of a minor, by himself or by any other person, may, at the discretion of the trustees or committee of investment of such bank or institution, be paid to such minor or person making such deposit; and the same shall be a good and valid payment for such bank or institution. In these examples reference has been made only to the assurance of selected or healthy lives. Unfortunately a large proportion of the population are not comprised in this category, either on account of hereditary taint or acquired disease, or on account of near relationship to those possessing one or the other. Many, knowing their position in this particular, regard their lives as beyond the pale of assurance, and never trouble an office on the subject. Of the actual applicants for assurance, it has been computed that twenty per cent are rejected,

or admitted only at rates above the average for healthy lives. A few English offices assure diseased lives at rates specially calculated with reference to the mortality prevailing amongst the class to which the assured belong; and the tabulated statements of mortality from pthisis, dropsy, hydrocephalus, and other forms of disease, certainly show remarkable uniformity both as to the prevalence and duration of each. But though the number dying yearly from specified causes is known with greater or less precision, we may reasonably doubt whether medical statistics have attained to a degree of perfection indicating the relative number dying at different ages, or the extent to which a disease supposed to be latent has not been developed. In the absence of this and kindred information, the assurance of diseased lives proceeds upon rates high enough to cover the worst imaginable contingency in every case, and therefore much too high to render this class of assurance generally available.

A directly opposite view of the figures we have presented may be suggested. "The tables of mortality," an objector may allege, "proceed on the average of the whole community, sober and drunken, sound and diseased, and for that reason represent a more unfavorable state of things than assurance offices, dealing with selected lives, are called to encounter." As applied to the Northampton, the Carlisle, and the English tables, the remark is unquestionably pertinent, but it fails to cover more than a section of the ground. If life assurance were a contract which neither of the parties could invalidate—if individuals once assured were constrained to continue the payment of their covenanted premiums during the term of life, just as the office is constrained to sustain the liability to pay the amount assured whenever death may happen, then, undoubtedly, the necessity for rigid scruting on the part of the office would be materially mitigated. But the case is otherwise. The society and the assured respectively enter into a contract which the assured alone is permitted to annul. The society is bound irrevocably, save in cases of fraud. The assured, on the contrary, is at liberty to continue his connection with the society, or to suspend payment of his premium when he chooses. He accomplishes a temporary object, and then withdraws; he finds his health better than he expected it to be, and he stops his premium; the society being all the time bound to submit to his bidding. The right of selection which the society exercises at the outset, is, then, to some extent neutralized by the subsequent exercise of a right of selection as against its interests; for the withdrawal of a member not only deprives the society of the portion of income which he engaged to contribute, but in a measurable degree weakens the security on which the mass of the assured have reckoned for the due creation of their respective benefits. Nor are these drawbacks fully counterbalanced by profits from lapsed or surrendered policies, which are often inconsiderately alleged against a company. On the principle of equity, an individual seceding from an assurance office has no right to expect re-payment of any portion of his premiums; he voluntarily abandons what the other party to the contract is obliged to respect; and if he receive any thing on retiring, the circumstance is properly attributable to concession

on the side of the office, acted upon, no doubt, by the pressure of competition, and by a desire to obviate every class of objection.

#### II. COMPETITION.

A reference to competition in this connection does not imply the presence of the precise evil in relation to life assurance, of which, in other matters, old communities universally complain. The legion of life assurance offices have a work before them broad enough to afford honorable scope for all their exertions: and the proper source of regret is, not that their number is large, but that the means they employ are often framed in view of popular ignorance and gullibility, rather than to promote a healthy regard to the judicious enterprise and the cautious policy which should be found at the bottom of assurance transactions. Schemes are constructed with a single eye to novelty, as a bait with which to catch the great public whale. Professions are put forward pretty as bubbles, and as hollow and evanescent. Promises are promulgated with Munchausen extravagance, without stopping to remember that life assurance, with all its poetry and pathos, is a great fact, open at any time to the impartial scrutiny of common arithmetic. The result is, that prudence is too frequently sacrificed to fleeting show; and in this way the solid, lasting interests of an enlightened economy are exposed to a petty rivalry and a disingenuous contest, worthy only of a tape store or a grocery.

With the quarrel waged in Britain by old offices and young offices, we of the new world need not meddle. The Atlantic rolls betwixt them and us, and we can well afford to stand aloof from their irritating controversy. Whether age gives to companies the privileges of monopoly, or youth the prerogative of imposture, is a question on which the English people need no enlightenment from Canada.

#### III. DURATION OF RISKS.

The finance of fire insurance and the finance of life assurance are essentially different affairs, and their management must be judged according to different standards. Measures adapted to serve the objects of one, would entail upon the other inextricable embarrassment. Fire insurance extends over a brief period, and involves risks limited to that period. The losses encountered may be heavy or light; the ability of the premium fund to meet them is ascertained without difficulty; and whatever be left after payment of these, and after setting apart as much as may be needed to cover outstanding risks, is properly surplus, either devisable as profits or applicable as a guarantee fund to pay off a subscribed capital or to inspire larger confidence in the company's future. Quite different is the position of a life assurance society. With a large present income, it has enormous distant liabilities. It receives current assets to defray deferred debts. It is a bank, receiving thousands year after year, to provide tens, perhaps hundreds, of thousands due half a century hence. In this respect it differs from every other institution in existence. Their balance-sheets are susceptible of weight and measurement now and always; a clear-

headed accountant sees through them at a glance. But in life assurance the matter is complicated. An institution may exhibit to the on-looker a brilliant array of figures, and yet be irredeemably insolvent. It may show a large current income, and nevertheless be journeying onward to ruin. On the other hand, it may reveal a lessened business and a falling capital, and still be able to fulfil every obligation now or hereafter coming against it.

#### IV. FINANCIAL MANAGEMENT.

Although, as has been said, the financial machinery of a life office is in the nature of things complex, its operation may be so simplified as to place proof of solvency within the comprehension of every man concerned. The disposal of a surplus, accruing from the "charge," or "loading," added to the net premium—the application of profit derived from the interest actually received on investments above the rate embraced in the premium calculations—and other similar niceties of management, are too intricate to be readily simplified, and too formal when simplified to be particularly attractive outside of the professional circle. But in relation to the solvency of an office, these points are of comparatively minor importance. On that head difficulties are more imaginary than real. Starting with a true life table and a confessedly safe rate of interest, a company ought to be in a position at any time to demonstrate its soundness; and there is more of credulity than judgment in the individual who remains connected with an office which systematically shirks the simple, available test. The better to understand this test, let us for a moment refer to the gradual progress of a life assurance fund, as illustrated in the operations of an ideal office.

Assume that a society starts with 300 members, each 30 years of age, and each assured for £500. The net premium on the Carlisle table, at three per cent, is £1 19s. per £100, or £9 15s. per £500. Assume, further, that 300 new members enter at the commencement of every succeeding year, each 30 years of age, and each assured for £500; and that the claims on account of death are all paid at the end of each year. Omitting decimals, the society will in its first year receive £2926 as premiums, and £87 interest; after paying £1500 on the debts which may be expected to occur in twelve months, it will possess £1514 invested stock. In the second year it will receive £5823 premiums from 597 members, and after payment of claims will possess £4558 stock. Proceeding at this rate, with the number of members and the proportion of deaths continually increasing, the premiums of each year will be found sufficient to cover all payments at death, and to add somewhat to the stock, until the close of the fortieth year. The members will then stand at 9282; the income from premiums at £90,545, and from interest at £33,636; the invested stock being £1,064,865. In the forty-first year the claims on account of death will exceed the income from premiums; and at the end of the fifty-sixth year, the income from premiums and interest united will be less than the outgoings. At that period, then, and not

till then, the encroachment upon the stock, amounting to £1,332,259, will commence.

Assume, again, that the six per cent rate be adopted by another society, exactly identical in regard to membership, management, and indeed on all points excepting only the material ones of premium and interest. At the end of the thirty-first year, the income of this second society from premiums will fall short of the outgoings for deaths; and at the end of the fifty-second year, the stock, amounting to £894,913, will be called into requisition.

#### V. Surplus Profits.

Of course, both cases are hypothetical. In practice, no office tallies precisely with either. A variety of differences, some adverse, some favorable, come in, in reality, to modify the results. But the illustration is sufficient for the purpose for which it has been constructed, namely, to prove that a society ought to be able at any time to show that it possesses invested means equal in amount to the aggregate of stock, which should be found at the credit of each policy-holder. Nothing is more easy than to tabulate the sums which should be in deposit for every pound of net annual premium paid upon lives which commence assurance at specified ages; and if the managers of a society withhold the information which enables every individual interested to judge of its financial condition, the circumstances must be ascribed, not to inherent difficulty, but to a determination to enshroud in darkness that which ought to be as clear as noon-day. There are bats and buzzards even in the life assurance world.

#### VI. MORAL RESPONSIBILITY OF ASSURANCE.

The number of life policies in force bears an infinitesmal proportion to the number of male heads of families; and of these policies a large share, amounting, conjecturally, to one fourth of the whole, have been obtained and are kept up as collateral security, or for other purposes of business.\* The community, or that portion of it which rejoices in self-complacent respectability, has not begun to appreciate the moral responsibility of life assurance, and the odium which rightfully attaches to those who refuse to avail themselves of its provisions. A popular writer has said, that "when life assurance shall be as universally understood and practised as it ought to be, he who has not made

<sup>•</sup> A recent estimate by a writer in a London publication, fixed the number of life assurance societies in operation in Great Britain at 175, assuring in the aggregate, in round numbers, £160,000,000 sterling, on less than a quarter of a million of lives. Many of these assurances are duplicates on the same lives. The number of individuals assured is calculated to be about 230,000, and these are nearly altogether parameter to the middle and higher classes." In this respect, the industrial classes of the parent country are immeasurably ahead of the classes occupying positions of social superiority. The latter muster a moral phalanx which, after every allowance, must be pronounced small, whilst the working people enrolled in Friendly Societies and Benefit Clubs constitute an army of upwards of 3,000,000, whose aggregate annual contributions amount to £4,980,000 sterling.

such a provision, or something equivalent, for the possibility of his death, will be looked on as a not less detestable wretch than he who will not work for his children's bread; and his memory after death will be held in not less contempt." The judgment is severe but suggestive: is it a hair's breath beyond the just and true?

How is it that whilst fire insurance is, comparatively, a rule, life assurance is an exception? Is it that a man, aware that his prospects in life would be largely damaged by the destruction of his merchandise, his furniture, or his dwelling, acknowledges the benefit he may himself derive from insurance and accedes to the terms on which it is presented; while he feels that the gain proceeding from life assurance is not obtainable by himself, and will only fall to the lot of others when he shall have ceased—humanly speaking—to be affected by their condition? This narrow selfishness lies, we fear, at the root of much of the indifference and most of the hostility which are manifested toward life assurance. Charity points to the supposition that in some quarters at least the indifference is traceable to ignorance or forgetfulness. Men otherwise earnest in their efforts to promote their families' good, forget that the prudence which prompts an effort to stave off danger from fire, presses with ten-fold force in the direction of provision for those from whom they may be at any moment snatched. So long as the energy of manhood remains, the loss of property cannot be deemed irretrievable; the exertion which first realized it may be expected to do much towards re-producing it; but for the widow and the orphan, suddenly plunged into pecuniary difficulty, no such consolation or expectation is available. Who that is possessed of right feeling, can regard without apprehension, not unmixed with self-reproach, the bitterness of poverty and sorrow which only the frail thread of his single life keeps back from his now happy hearth? What husband or parent endowed with ordinary affection can calmly contemplate the possibility—aye, the probability, if not the certainty—of destitution being experienced in all its crushing reality by his family, in the event of his death? That he has started in the direction of prosperity is a plea in no way applicable; for the grave, perhaps, stands betwixt himself and the distant goal. That he enjoys ruddy health is an excuse not one whit more pertinent than its predecessor; for others robust and temperate as himself are daily summoned to their final habitation.

#### VII. DANGER OF DELAY.

As yet exempted from many of the chronic ills which cripple and crush European communities, we of the New World have proved ourselves apt copyists of their weaknesses and vices. Forgetting the thrift which stern necessity imposed upon the early settlers of the country, we appear intent upon nothing less than wide and rapid strides. We must be highly civilized, forsooth—polished brightly as jet blacking can make us; and in anxiety for effect we often overlook considerations which a little thought could not fail to suggest. We worship externals as devotedly as the giddy multitude of Paris, or the motley crowd of a German watering-place; and are half disposed to

join both in treating life as a prolonged joke. We have thousands of industrious fathers who contentedly spend their last farthing that they and their families may retain what is called "position" in society. They make that their idol, and bow before it as reverentially as the Hottentot before the god of his own handiwork. They live continually in advance of their income, not for the gratification of their own tastes, which remain simple enough, but in obedience to the law of leather and prunella, which measures a man's value by the quality of his coat, the texture of his wife's last shawl, the dimensions of his daughter's bonnet, or the number and brilliancy of his social entertainments. Accost them at midday, and they are unable to spare a life assurance premium. The banks have stopped discounting, and hard times are ahead. See them at night, and what a change! The tightness of the money market is no hindrance to a dashing quadrille party. The hardness of the times is not a reason why a year's assurance premium should be diverted from the throats of boon companions. Our friends' lives are not assured; but why mar their fun by reminding them of the fact? Their families have no protection against poverty; but, poor things, they must be like their neighbors! And so, mayhap, Death catches them. He steps in, unbidden, and carries off husbands and fathers, who have had good trades or professions, but who have always happened to spend quite as much as they earned. He found them at the dinner-table, the ball, or the card party, laughing at the present and never dreaming of a future. When their seats are empty it is discovered, too late, that the heartiness of their companionship has been exercised at the cost of the comfort, not to say the existence, of the wives and children whom they loved. In life they cracked jests; at death they crack hearts. \* \* \* \*

#### VIII. THE OBLIGATIONS TO ASSURE.

It were unfair to affect ignorance of the objection which piety here and there suggests to all assurance. In whatever form, whether guarding against casualties by fire, or protecting against the contingency of death, assurance is condemned by a certain class of estimable people, as in their judgment violating the domain of Deity. The class in question are not always consistent. Some of them practise fire insurance, but shrink from a life policy as a device of the evil one; and preachers may now and then be met who press the objection while themselves contributing to an annuity or superannuation fund. The principle which denounces provision for a man's wife or offspring while sanctioning provision for himself, is too pitiful to merit consideration, and too transparently wicked to operate extensively against the system of assurance. Leaving to these gentlemen the enjoyment of their peculiar logic, let us ask, How far a just interpretation of the command, "Take no thought for to-morrow," can be construed adversely to the exercise of human prudence? The spendthrift beyond doubt tramples on the letter and spirit of the precept; but the avoidance of his crime does not necessarily imply an adoption of the sin and folly of the miser. Not to use care against want were

surely an error quite as great as to burthen ourselves overmuch with anxious thought. In this, as in every other instance, the genius of Christianity harmonizes with the economy of nature, and he but poorly serves his Master who, on any ground, seeks to construct an element of antagonism betwixt them. The bee and the beaver, the ant and the squirrel, typify instinctively the practical wisdom which man is required to manifest. Wiser than man, they hit the happy medium; laying up store to meet winter's wants, yet not piling up treasures which they never can consume. Should not we, like them, shun the extremes of profligacy and parsimony, and, while casting care on Providence, rationally use the blessings which are placed within our reach? The lawful employment of the present is not incompatible with a righteous regard for the future, but on the contrary, enjoins it upon us; and by what plan other than life assurance can these twin duties be brought into practical unison?

The immediate consequences of life assurance are seen in their relation to the family, in the removal of the apprehension which renders hearths unhappy, in the promotion of permanent comfort and independence, and in the development of sympathies which the grossly selfish man can never know. Scarcely less obvious are the benefits of the system in its relation to society. Through his family, the prudence of the assured reflects upon and influences those around him, fostering thought for others, generating self-denial as a means of doing good, building up self-dependence as an ennobling element of character, and in this manner infusing into daily life a purer feeling and a loftier conception of duty than have hitherto prevailed. Viewed in this light, life assurance forms a barrier against avarice as well as against improvidence, stripping both of their most plausible pretexts, and doing much to counteract the baneful influences which they are alike calculated to produce. Of all men, then, the Christian is most interested in sustaining it, and in giving to its claims a more general and cordial recognition than they have heretofore received.

#### IX. STABILITY OF LIFE COMPANIES.

The remark leads us not unnaturally to consider more specifically points that properly enter into individual action in dealing with life assurance. The head of a family, satisfied that his duty is to assure his life, should weigh candidly the peculiarities and pretensions of offices which are brought under his notice. As a discreet man, he will not be misled by the appearance in a prospectus of pompous names as patrons or directors. These may help to keep a rickety concern upon its legs for a few years, but, as criteria of good management, they are infinitely below the names of reputable men of business. Besides, if the office be established, no difficulty need be experienced in ascertaining how it has acted towards its members. Has it invariably kept them in the dark in reference to its affairs? Does it hold its meetings with closed doors, that it may effectually conceal the condition of its business? Has it dealt honorably with embarrassed members, and been governed in its settlement of claims by the

ij

T

E

t

Ē

g

1

spirit rather than the letter of the assurance contract? If the answers to these interrogatories be not satisfactory, have nothing to do with it; avoid it as you would an Indiana bank-note. If satisfactory, then look a little farther. Scan closely its published accounts. Mark what proportion its realized capital bears to its age and its income. Should you discover, as perchance you will, that an office boasts of its position as the result of years of business, without being able to show invested means equal to a single year's income, set that office down as tottering, and therefore undesirable as the ague. If subscribed capital, premiums and all, have been expended in providing gilt gingerbread incident to the start, direct your steps to more economical quarters. Begin next to look for genteel professional tricks. Remember that an English railway king descended to the kitchen to cook accounts, and that life assurance luminaries may be tempted to imitate his example. A gridiron is not a vulgar thing when handled with kid gloves. Look out, then, for cooking. It may be that five years' mortality is made to look like that of six, for the purpose of establishing a credit for care and good fortune in selection. It may be that the present value of the "charge," or loading, has been capitalized, as well as the present value of the net premium, without also capitalizing the present value of future expenses. Mistrust all mystery, all wise winks and sagacious shakes, and rest not satisfied until you have discovered an office whose balance-sheet and mode of dealing accord with your ideas as a common-sense business man.

Having found what satisfies the requirements of your judgment, complete promptly the duty that has been sensibly commenced. In this more speedily than in most matters, action should follow thought. Numerous are the instances in which persons assured have died within a brief period after payment of the first premium; and others there are scarcely less plentiful in which parties of dilatory habit have been prevented from accomplishing an admitted duty by the sudden occurrence of ailments, slight in their beginnings but prejudicial in their consequences. Procrastination, proverbially perilous,

is peculiarly so here.

Another consideration to be borne in remembrance, is the necessity on the part of the applicant of being scrupulously honest in the transaction. The hint is by no means superfluous. Corporations are by common consent alleged to be devoid of conscience; and men in dealing with them not unfrequently descend to subterfuges and manœuvres from which they would shrink in intercourse with their fellows. To establish the imputation we need not refer to diabolical deeds perpetrated to defraud the medium of life assurance, such as those which occurred long ago in London and more recently at Bristol; nor is it necessary to cite circumstantially the conspiracy successfully concocted in Ireland to plunder London institutions by introducing lives known to be ineligible. These are circumstances happily so rare in their occurrence that they have no direct bearing on the point immediately under notice.

# NEW BANKS IN GERMANY.

- I. The Bank of Commerce and Industry, Darmstadt. II. Bank of Frankfort-on-the-Maine. III. The Landes Bank, Dessau.
- I. THE BANK FUER HANDEL UND INDUSTRIE (BANK OF COMMERCE AND INDUSTRY) IN DARMSTADT, GRAND-DUCHY OF HESSIA.

This Bank was established with a capital of 10,000,000 florins, with the privilege to increase it to 25,000,000. The shares to be of 250 florins each. It went into operation on the 1st of July, 1853, under the most unfavorable auspices. The first general meeting of the board of directors took place on the 22d of May last. The reduced value of the shares at such an early period, being only 218 florins per share, gave rise to many doubts as to the future success of the enterprise. But no experienced merchant could expect, that an institution, forced to make its way under such unfavorable circumstances, could render any profits at so early a period. We notice in the first annual statement, published in December last, that the business, owing to the praiseworthy caution of the directors, was rather limited, thus avoiding many hazardous risks.

We know too little of the local circumstances of southern German cities, to enable us to judge of the advantages of Darmstadt as the principal office of the association; in this respect we agree with the opinion of the President, Mr. Mevissen of Cologne, who promises to the institution most important results from the branches in operation, or now being established.

The principal branch of the Bank is that of New-York, under the firm of G. vom Baur & Co., who, by this connection, are enabled to transact business with the Bank and all its branches and agencies. Frankfort and Mayence rank next in importance to the New-York branch.

From a knowledge of the circumstances of both countries, we have come to the conclusion that the banking business involves less risk in this country than in Europe. None of our banks, managed by competent officers, have ever met with severe loss: we except of course the United States Bank, an institution which not only ruined the holders of its stock, but also now, after a lapse of eighteen years, has not yet wound up its affairs, thus keeping the assets out of the hands of the lawful owners and throwing a veil over its transactions. The influence of this sad failure we even now most severely feel both in Europe and the United States.

Holland, for instance, hesitates to this day to transact business in American securities; the Amsterdam Bourse, one of the most important of the world, never quotes the bonds and loans of the United States and the several States.

# II. THE BANK OF FRANKFORT, O. M.

At the head of this enterprise we notice the names of Grunelius & Co., M. A. von Rothschild & Sons, and the Frankfort Vereins-Kasse.

The capital of 20,000,000 florins is subscribed in shares of 500 florins each; the first issue of shares will amount only to about 20,000. As soon as these are fully paid in, the balance will be issued.

The Bank commenced operations immediately after the first 20,000

shares were all paid in.

The Company reserves to itself the right to make additions to the capital as often as the increasing business of the Bank shall demand an increase; but it will be necessary that such an increase should have the sanction of the General Assembly and the permission of the State government.

The Bank has its location in Frankfort O. M., but there will be

branches and agencies established in all cities of importance.

The payment of the instalments of the shares takes place in stipulated terms; the shares may be transferred by a simple indorsement.

Shareholders are responsible for the liabilities of the Company only to the amount paid in on their respective shares. There is a certain number of dividend-coupons added to each share, payable to bearer. (A measure which would be of great advantage if introduced into the United States, as it would be the sure means of obviating the present difficult system of transferring.)

If a shareholder fails in business, his shares are to be sold forthwith. The different business departments of the Bank will be classed as follows: discounts, exchange, collecting and safe-keeping of money and valuables.

All notes or drafts offered for discount must have no longer a period than three months to run; they must be indorsed by three respectable and responsible firms. In place of the three indorsements a mortgage of property covering the amount to be discounted will be accepted. If one of the three firms indorsing a draft or note should fail in business, while such a note or draft is unpaid in the hands of the Bank, the first indorser will have to redeem it, or at least satisfy the Bank of its security by procuring another responsible indorsement.

The Bank opens accounts with persons and companies, residents of Frankfort, and keeps money and Frankfort bank-notes at their disposal by check or by writing off the account.

The Bank will not open accounts with persons who have failed in business, as long as their affairs are not settled: nor with such per-

sons as have been guilty of public offences.

The Bank makes loans for no longer a period than three months, and of no larger an amount than 1000 florins at a time. It loans on gold and silver in bars; on coins and jewelry; on good drafts on other cities; on responsible state stock, shares, and obligations; on Frankfort judicial first mortgages; on certificates of deposit of merchandise in the stores of the customs, or on merchandise which the

Bank keeps in its own stores. The party drawing the loan must be a resident of Frankfort.

The Bank takes charge of collection-paper, charging a commission, but is obliged to collect and make payments gratis for the Frankfort government.

The Bank holds for safe keeping metals, jewelry, stock on account of depositors, charging a commission therefor.

Money lying idle may be employed in the purchase of precious

metals, drafts and notes on domestic and foreign places.

The Bank will issue bills in no smaller denominations than five florins; the total amount of the issue not to exceed double the principal paid in, as long as it does not reach the sum of 10,000,000. Only two and a half per cent of the whole issue are to be circulated in bills of denominations under 10 florins. (We are obliged to remark that the bank-notes of this state are by far better secured than those of the Frankfort Bank.) One third of the whole amount of the issue must be kept in the Bank in ready cash or silver; the balance in gold, exchanges, or securities. The present committee is composed of Messrs. Peter Carl Grunelius, Meyer Carl Freheirr von Rothschild, Phil. Christ, Wilhelm Donner, Jacob Rigaud, und Jacob Carl de Bary.

Frankfort bankers have, during several years past, transacted quite an extensive business with New-York; and we have no doubt the attention of this Bank will be directed to the establishment of a branch for the United States.

# III. LANDES BANK AT DESSAU, (ANHALT.)

The charter for this Bank was granted by the Duke of Anhalt-Dessau, on the 15th of September, 1846, to a stock company, and went into operation on the 2d of January, 1847. The capital stock of the Company is 2,500,000 thalers, in shares at 200 thalers each, to be increased by a majority of the stockholders, and approved of by the government. The stockholders are mostly bankers and capitalists of Prussia: the law of that kingdom being opposed to the establishment of private banks, they started the Landes Bank, at Dessau, a small city, connected by railroad with Berlin, the capital of Prussia, also but a short distance from Magdeburg and Leipzic.

The Landes Bank has the privilege to issue bank-bills in denominations of 1, 5, 10, 20, 50, 100, 500, and 1000 thalers each; to discount notes and drafts; to receive and pay money on commission; to receive deposits and pay interest on them; to draw bills of exchange; open accounts; receive money, gold, etc., for safe keeping; to make purchases and sales of notes, bills of exchange, bonds, stocks, etc., on commission; to make advances on gold and silver bars, and coins; also to make advances on bonds, stocks, etc. The total issue of banknotes is limited to the amount of the capital stock, and never to exceed the amount of the available funds on hand. One fourth of the amount of notes in circulation is always to be on hand in specie. Any time

a bank-note is presented for payment it is to be redeemed in coin to any person presenting it. No attachment can be made on the shares or dividends belonging to stockholders. The Bank can at any time call in all notes in circulation to be presented within a term not less than one year, and those notes not presented within that time shall be void.

The board of directors to be composed of not less than four, and not more than six members, the president and two other directors to reside at Dessau. These three directors receive a salary, and have to attend the business of the Bank. The board of directors meet once a month for a revision of the affairs. The directors have no personal responsibility for the affairs of the company. None of the directors receiving salary to be allowed to do business on his own account.

The board of management is composed of 18 members, elected from the number of stockholders entitled to vote. Once a year the stockholders hold a meeting, five shares entitling to one vote. A dissolution of the company, and a winding up of the affairs to be decided in a general meeting, by a majority of three fourths of the

members present.

A balance-sheet from the books of the Bank to be drawn at the close of each year, on the 31st of December. Of the net earnings, after the deduction of four per cent, one tenth to be divided among the members of the board of management. A fund to be created from the earnings to cover extraordinary losses.

The government of Dessau appoints a permanent commissioner as

superintendent of the Bank.

AND STREET STREET, STR

#### BANK FRAUDS IN ENGLAND.

I. Davidson & Gordon. II. Strahan, Pauls & Bates.

I. According to the reported proceedings in the English Bankruptcy Court, there have been some recent operations among the London bankers which partake of the Schuyler character. The character of the noted firm of Overend, Gurney & Co., bill-brokers, is somewhat

involved. A late letter from London says:

"About a year ago a firm named Davidson & Gordon failed for £500,000, and it was discovered that for a long time they had been obtaining advances on the security of fictitious warrants for imported produce deposited at a London wharf. They immediately absconded, but were subsequently captured at Malta, and are now undergoing a criminal examination. Among their creditors are the great firm of Overend, Gurney & Co. for about £120,000, and in the course of the proceedings it has transpired that this house was made acquainted with the delinquency of Davidson & Gordon by the personal confession of one of these persons some months before their open failure, and that nevertheless they had kept it secret, Davidson & Gordon having pretended to them that if allowed to go on they would be able

to recover themselves through the profits of a large distillery in which they were engaged. It is contended that owing to Messrs. Overend, Gurney & Co. having neglected their duty of immediately breaking them up, other persons have subsequently sustained severe losses, and although the reproach to which the Overends appear to have rendered themselves liable falls chiefly upon one member of the house, (Mr. Chapman,) by whom the arrangements with Davidson & Gordon were conducted, they all of course share in it, and it is not easy to over-estimate the severity of the remarks upon the subject which are now current in all the leading mercantile circles."

On Thursday, the 31st May, an examination of the parties was resumed in the Bankruptcy Court, which was crowded by merchants. bankers, and other commercial gentlemen, who appeared to take a lively interest in this important investigation. Messrs. Overend, Gurney & Co. were represented by Mr. Edwin James, Q. C., who attended in order to watch the proceedings in consequence of certain remarks made by the prosecution, imputing motives of a not very upright character to the banking firm in their transactions with the

bankrupts.

Mr. Chapman, one of the firm, (and son-in-law of the senior partner,) had previously stated that the firm had no transactions with the

bankrupts after October, 1853.

At the adjourned proceedings it was proved that the bankrupts had had discounts from Messrs. Overend, Gurney & Co. to the extent of £8000, between October, 1853, and April, 1854. The case is still before the court, and the evidence brought forward was to the effect that the banking firm had for some time been aware of the condition

of the bankrupts before their absconding.

Messrs. Overend, Gurney & Co. are considered as the heaviest bill-brokers in the world. They have for many years been the leading house in this branch of the monied operations of London, and have hitherto possessed a high character for integrity. The present case is a novel and important one, and has created considerable excitement among the banking fraternity of that metropolis. It will, at all events, give the *Times* an opportunity to say that all the rascality in banking and commercial operations does not belong to the American side of the Atlantic.

#### II. STRAHAN, PAULS & BATES.

Experience demonstrates that extremely prosperous times and extremely adverse times are both apt to develop frauds and rottenness wherever they have existed among banking concerns and monied corporations. Another fraudulent case has been brought before the courts of London, involving the character of the extensive banking firm of Messrs. Strahan, Pauls & Bates, of No. 217 Strand.

in reference to the failure, a London letter says:

"The failure of Strahan, Paul & Co., the bankers, is likely to prove a much more serious affair than was at first contemplated, as it appears that not only have the funds of their depositors been deliberately squandered, but that various securities deposited in trust have also

been made away with. By a special law in relation to bankers and agents, this amounts to felony, and the probability therefore is, that the case will not be confined to the jurisdiction of the bankruptcy commissioners, but that it will be brought into the criminal courts. In addition to the interest excited by the extent of the liabilities of the house, the fact that one of the partners, Sir John Dean Paul, occupied an unquestioned position as the head of a section of the religious world and was treasurer to a large number of societies and charities in connection with it, causes each new revelation of the delinquencies which have been practised to be regarded with general attention.

The following report, which we take from the Liverpool Post of June 22d, makes further revelations in the affair:

On Wednesday afternoon, Mr. Robert Makin Bates, the third partner in the firm of Strahan, Pauls & Co., bankers, of 218 Strand, London, was placed at the bar, at Bow street, before Mr. Jardine, to answer the charge of having, in conjunction with Messrs. Strahan and Paul, unlawfully negotiated or otherwise disposed of certain deeds or securities, of the value of £6000, which had been intrusted to them

for safe keeping by Dr. Griffiths.

It appears that, upon the private application of Mr. Bodkin, the counsel for the prosecutor, the magistrate issued warrants for the apprehension of the three defendants on Tuesday afternoon. Mr. Bates was apprehended the same evening at half-past seven, at 41 Norfolk street, Strand, after which the officers started by the Brighton railway for Nutfield, near Reigate, the country residence of Sir John Dean Paul. They found Sir John at home, and succeeded in serving the warrant upon him, but it being too late to return to London the same night, they allowed their prisoner to go to bed, and sitting up all night themselves within view of Sir John's room, arranged to accompany him to London by an early train the next morning. Accordingly they conducted the prisoner on Wednesday morning from his residence at Nutfield, to the Reigate station, a distance of a few miles, arriving at the latter barely in time to save the train. Tickets were procured hurriedly for the three, and, according to the statements of the officers, the train was actually in motion, when Sir John took his seat in a second-class carriage. The constables were in the act of following him into the same carriage, when a railway porter pulled them back, exclaiming: "The train is in motion, and you can't get in." The officers replied: "We are police-constables, he is our prisoner, and we must accompany him. Resist us at your peril!" To this the porters merely rejoined that they were only carrying out their orders to "prevent any one entering a carriage while the train was in motion," and, having closed the carriage-door against the officers, the train went off without them. The constables state that they immediately represented the facts to the superintendent, and showed him their authority, but he refused to "signal" the train to stop, although consenting to send a telegraphic message to the London station. This was done by desire of the officers, who proceeded to town by the next up-train, which reached London-bridge only ten

minutes after the one they had missed. On inquiry, however, of the station-master at London-bridge, if their prisoner had been detained, he replied that he did not know Sir John Paul, by sight, and of course, therefore, had taken no steps in the matter. The police-officers, who had been in some measure disarmed by Sir John's suavity of manner, had thus the mortification of finding that their prisoner had effectually escaped; and, throughout the day no trace of him could be found. They were also unsuccessful in their pursuit of Mr. Strahan, who was expected to keep an appointment at the bank, but who did not make his appearance, although anxiously looked for throughout the day. Under these circumstances, Mr. Ballantine, counsel for Mr. Bates, suggested that the case should stand over for a day or two, for the convenience of all parties, which was agreed to. Mr. Wm. Strahan, the other partner, was afterwards arrested. By the London Herald of June 23d, we learn that Sir John Paul has also voluntarily surrendered himself, that a further examination was held, that no application was made to admit the prisoners to bail, and that the case has excited the most intense interest in London.

The criminal proceedings in this case are taken under the act 7th and 8th of Geo. IV., c. 29, s. 49, by which any person convicted of unlawfully disposing of securities, is liable, according to the quaint words of the act, "to be transported beyond the seas for any term not exceeding fourteen years nor less than seven years, or to be imprisoned for any term not exceeding three years, and, if a male, to be once, twice, or thrice publicly or privately whipped, (if the court should think fit.) in addition to such imprisonment."

As specimens to show how the bankers Strahan, Pauls & Bates did business up to the last moment, the London News of June 21 gives the following facts related at a meeting of the creditors held in London.

A creditor present said that he paid money into the bank a few minutes before payment was stopped. Another gentleman stated that money was received from him at three o'clock on the day previous to stopping; and a fourth stated that at cleven o'clock in the morning of stopping, it was known that the committee of bankers in the city had refused to grant them credit. A case was related of one gentleman who had deposited all the money he had in the world in the bank, and was about to be married, having given instructions for the withdrawal of the money, but the check was stopped. The solicitors in the locality, both themselves and clients, are heavy sufferers. The great truth to be arrived at, was, how so many persons could manage to draw out their balances whilst other checks were delayed. One nobleman had received the hint the day before and managed to draw out £5000. A number of cases of the greatest hardship were detailed.

• From the London Times of the 22d ult., we copy the following temarks on the subject:

Talk of Robin Hood and Little John in Sherwood Forest, of Rob Roy in the Highlands, and of their dingy imitators in this metropolis, described by Dickens and Ainsworth, we believe there to be a per-

1

petual succession of the class. Perhaps the same man passes from one form into another—developing, according to the changes of society. from a forester to a mountaineer, thence to a highwayman, thence to an instructor of pickpockets and receiver of their day's work in St. Giles's. The last stage before us is very splendid, a gilded butterfly compared with the shabby crysalis and the worm. Only think of a select society of gentlemen, high in the fashionable, and even the religious world, living in a magnificent style for years and years on the deposits of a number of confiding, and even admiring noblemen and gentlemen. They have had good houses, costly furniture, splendid establishments, sumptuous entertainments, and the best of company up to the very last, with the full consciousness that they were doing it all out of the money of some score, or rather some hundreds of people who felt it an honor to put their money into the hands of such men. The aristocratic adventurers of the Captain Macheath school, who would never stop any thing less than a gentleman, were not so nice in their ideas or so select in the class of their victims. How the gay coterie must have laughed in their private meetings at the Earl of This or the Marquis of That, and the scores of Right Honorables. and the substantial country gentlemen, and the excellent gentlewomen. and the religious societies, and the respectables of every rank, who were throwing their money into the till, never to see it again! Is there no Gil Blas to write an account of this bandits' cave? The clergy, who are always imitators of what is good and great, and have an instinct in favor of the substantial and abiding, have thrown the savings of their rectories into the bank. Almost any body who happened, by the sale of a property or the death of a relative, to be burdened with an odd fifty thousand pounds he did not know what to do with, felt immensely obliged to those kind gentlemen, Messrs. Strahan, Pauls & Bates, for relieving him of the troublesome charge. Why, it is the merest chance in the world they have not gone on indefinitely, right into the next century; for there are all sorts of stories affoat of people who were on the point of putting another twenty thousand or seventy thousand into the bank. They have been so long in the business, and always so respectable. People remembered them when they were cricketers, and all that sort of thing, and, though less able latterly to bat and to bowl, no doubt they were becoming more and more substantial every year, no body knew how rich. All the time the whole firm was not collectively worth as much as the crossing-sweeper opposite their door; and they knew it. As they walked out of their bank arm in arm, they knew that he was worth all of them put together.

People who have been balancing themselves long on a narrow ledge between splendor and bankruptcy, get rather unscrupulous. It cannot matter what you do with a man's money when you are really living upon it. It would only be an idle superstition to respect the form when you are devouring the substance. So, not only common deposits, but securities, namely, Dutch guilders, Danish bonds, Italian railway shares, and every form of paper in which prudent clergymen and judicious capitalists could invest their savings, have passed into

the strong-room of 217, 218, Strand, to pass out of it no body knows where. There is much virtue in lock and key. There may be every thing under it, there may be nothing; and at the aforesaid numbers in the Strand, the latter seems to have been the case. We suppose there was an unusual influx of wealth in the last week; a sort of flickering in the socket. The partners found, it is said, a good round sum in the till. So they wrote to their particular friends, to certain favored depositors, to give them a hint; and when some three fourths or so had been sacrificed to friendship, or perhaps to make friends with the mammon of unrighteousness, they left the remainder to the public, just as the genteel highwayman of the old school used to present his victim with a guinea out of his own purse, for luck or to carry him to the next town. Really the thing has been done in such grand style, and it is of so little importance whether it is Sir John Smith or Sir Robert Jones who gives a good dinner, that we could almost admire the brilliancy of the fraud. But unfortunately, as usual, there is a crowd of little as well as great depositors. Widows and orphans and wards, and small people of all sorts, compose the bulk of the sufferers. It is said a good deal of the prizemoney due to our poor sailors has gone to bolster up the credit and the hospitalities of the firm, and, among others, the widow of Admiral Boxer has lost his savings. Is it possible to exaggerate the crime of such a career? What is it to rob—aye, to rob and murder half a dozen people, put them out of pain at once and dispose of their bodies where no body will know any thing about them, compared with the act of scattering ruin over hundreds of quiet, respectable, and virtuous households, the scene of sacred economy and the sweet charities of domestic life? How many girls will go portionless! how many young ladies become governesses! how many young men go to Australia, or behind counters, instead of to College or the Guards, in consequence of this bankruptcy! How many hearts will be broken! how many constitutions undermined by trudging and drudging, that have hitherto known nothing worse than a headache after an evening party or the shaking of an ill-hung carriage! What do the perpetrators deserve, could we really deal out penalties in proportion to the real malignancy of the crime? Unfortunately this is not the only blot, the only scandal lately betrayed in high commercial quarters. Absit omen. We trust we are on the eve of no greater mishap than the ruin of a few hundred families.

The proceedings in the case of Messrs. Strahan, Pauls & Bates, were before the Bankruptcy Court at the close of June. The following is their balance-sheet of

#### DEBTS AND LIABILITIES.

The first column represents the accounts as stated in the bankrupts' books, and the second column the amount of assets that will probably be realized.

The next sitting for the further proof of debts and the examination meeting are fixed for the 26th of July next, at twelve o'clock.

Amongst the prominent creditors, were the following: The Hon. Robert Grimston, Sir George Burrard, Lymington; Lady Grattan, Hon. F. J. Tollemache, the Hon. G. Tollemache, the Earl of Burlington, Hon. G. H. Cavendish, Lady Boyd, Lord Cavendish, the Countess of Verulam, Lady Craven, Hon. Caroline Fanny Pennington, Lord Muncaster, Lady Ramsdale, Sir A. Oliphant, Sir Lucius Curtis, the Earl of Carnarvon, Earl Dysart, the Hon. Louisa Maria Tollemache, the Duke of Devonshire, Viscount Palmerston, Admiral the Right Hon. Frederick Wm. Lord Aylmer, Hon. H. J. Robert Manners, Hon. John James Robert Manners, the Duke of Rutland, Earl Manvers, Viscount Melville, the Marquis of Clanricarde, a number of barristers and members of the Church, and lastly, Mr. John Lawrence, the able advocate himself.

This is the most extraordinary case ever known among bankers, in the negotiation or sale of bonds, etc., for safe keeping. The following is a list of securities fradulently disposed of:

List of Parties, whose Securities are Sold.—Lady Carnarvan, 500 Exchequer Bills; Admiral Aylmer, (H. & Co.,) 500 do.; Captain Frederick, (H. & Co.,) 800 do.; Duke of Rutland, (Militia Account,) 100 do.; Tollemache & Collett, 500 do.; Lord Manners, 300 do.; A. D. Wigsell, 5000; Strahan & Co., 2800 do.; Total, 10,500. C. A Caldwell, 12,000 Brazilian 4½ per cents; Mrs. Weir, 7700 Brazilian 5 per cents; Mrs. Hare, 600 do.; J. Tregonwell, 2400 do.; Mrs. L. Herbert, 2500 do.; Mrs. Yatman, 200 do.; R. K. Neville, 10,400 India Bonds; Mrs. Strickland, 300 do.; W. C. Morland, 3000 do.; Sir A. Clifford, 1900 do.; Wynn, Tyler, Brown & Kirwan, 6000 Canada Five per Cents; Dr. Griffiths, 10,000 Danish Three per Cents; do., 5000 Danish Three per Cents; do., 150,000 fls. Dutch 2½ per Cents; Amelia Bailward, 34,000 do.; E. S. Bailward, 42,000 do.; Julia Bailward, 34,000 do.; Miss Churchill, 39,000

do.; Sir A. Clifford, 36,000 do.; G. S. Gough, 11,000 do.; R. H. B. Hall, 30,000; Dalton, 7000; Burton, (Halford & Co.,) 75,000 do.; Capt. Jones, do., 106,800 do.; Morris, do., 9000; Heringham, do., 28,000 do.; Bailey, do., 19,000 do.; Heppean, (Trustee.) 66,000 do.; Miss Reynolds, 19,000 do.; E. Sawbridge, 24,000 do.; Mrs. J. Streatfield, (Trustee.) 57,000 do.; Mrs. F. Streatfield, 40,000 do.; John Tregornwell, 50,000 do.; George Willis, 12,000 do.; Madame Charritte, 88,000 Dutch 3½ per Cents; Colonel Peacocke, 20,000 fls. Dutch 4 per Cents; Mrs. Boyd, 13,000 do.; Mrs. Meyrick, 12,000 do.; Admiral Alymer, 6000 do.

List of Securities Sold or Deposited.—588,000 fls. Dutch 2½ per Cents, Peppercorn, £28,000; 14,500 India Bonds, do., £14,500; 10.500 Exchequer Bills, (March,) do., £10,500; 120,000 2½ per Cents, sold, \$6137 10s.; 10,000 Danish 3 per Cents, do., \$7487 10s.; 150,000 Dutch 2½ per Cents, 88,000 do. 3½ per Cents, 50,000 do. 4 per Cents, 6000 Canada Bonds, 5000 Danish 5 per Cents, and 2700 Brazilian 5 per Cents, Overend, Gurney & Co., £27,000; 2000 Brazilian 4½ per Cents, 10,000 do. 5 per Cents, Burnard & Co., £20,000; 1300 India Bonds, sold; Total, £113,625.

According to the money article of the Times, the general impression seems to be that they will escape all consequences from the criminal charge against them, owing to the technicalities of the act of Parliament under which they have been arraigned. This result, however, is not at present quite certain. Should it occur, the only authority to take cognizance of their offences will be the Court of Bankuptcy. The commissioners have power to refuse a certificate to a bankrupt who has contracted debt by fraud, and the effect of the refusal entitles any creditor to cause the bankrupt to be arrested and imprisoned. He cannot then obtain his discharge under a year, except by order of the Court. The measures on the part of Strahan, Paul & Co., are considered to have been conducted with great art, the inference being that they committed a voluntary act of bankruptcy, in order to get proccedings instituted by a friendly creditor, and with the view to make the disclosure which should exempt them from the criminal penalties due to their conduct.

The house has been believed for years to be one that was gradually dying out, and it appears even now that they have no creditors in the city of London, except a few persons who have recently been incautious enough to take some of their acceptances, which it seems have been attempted to be circulated in several quarters within the last few weeks at 7 per cent discount, or any other rate that could be obtained. It is among noblemen and wealthy commoners at the West End that the disaster will be chiefly felt; and the partners acknowledge one case in which, at the time of their stoppage, they held £40,000 to the credit of a drawing account. Other circumstances are mentioned which leave no doubt that when the full examination takes place, instances of cruel hardship will transpire such as have rarely been exceeded. With regard to the bank being kept open and payments made during the whole of Saturday, when on Friday night it had been ascertained that its existence could under no circumstances

be prolonged beyond another day, it appears that no explanation is attempted, and the indignation is therefore general. Every day that the bank has been kept open during the past year or two must, however, have involved an equally deliberate violation of the rights of all parties. Under such circumstances the public will demand that the investigation in the Bankruptcy Court should be of the strictest and most searching character, although it is inferred that the fiat has been obtained through a friendly channel, and that an effort will consequently be made to secure a choice of assignees which may prevent the case being vigorously dealt with. As to the share of responsibility to be sustained by each individual partner, reports vary; and, from the fact that each one in turn is mentioned as the principal cause of the mischief, it may be assumed, perhaps, that all are compromised in a like degree. In the case of Sir John Paul, the circumstance that the entail of his estate is said to have been already cut off, may be construed as a favorable feature, since it would show that he has unreservedly included himself in the ruin he has caused to others. The firm were connected with various companies, Sir John being Governor of the Copper Miners' Association, and Chairman of the Railway Passengers' Assurance Company, while Mr. Bates was Chairman of the Namur & Liege Railway. It is scarcely necessary to add that the feeling excited by every feature of the case derives additional intensity from the manner in which the attention of men of business has recently been excited by the unlooked-for developments in connection with the affairs of Davidson & Gordon.

### BANK CONVENTION AT SYRACUSE.

Proceedings of the Convention of Bank Officers held at Syracuse, Monday and Tuesday, July 9th and 10th.

FIRST DAY.—Morning Session.—In pursuance of a call previously published, a Convention of Representatives from the Banks of this State met at the City Hall in Syracuse, Monday, July 9th, at 10 o'clock A.M. The meeting was temporarily organized by the appointment of G. W. Cuyler, of the Palmyra Bank, Chairman, and D. H. Rasbaeh, of the Chittenango Bank, Secretary. A committee on permanent organization was then appointed, consisting of the following gentlemen: Hamilton White, J. S. Ganson, G. H. Mumford, W. R. Osborn, A. G. Story. The meeting adjourned till 2 o'clock in the afternoon.

AFTERNOON SESSION.—The Convention reassembled as per adjournment, and the committee on permanent organization reported the following as the officers of the Convention, which report was unanimously adopted: For President, G. W. Cuyler; for Secretaries, G. H. Mumford, and D. H. Rasbach.

Several plans were proposed by gentlemen present for the establishment of a Bank of Redemption, or office of exchange for the country banks. After some discussion, it was agreed to appoint a committee of ten to consider the several propositions presented, and report a plan for the establishment of the institution in question, at an adjourned meeting of the Convention at 9 o'clock on the following morning. The following is the committee thus appointed: Jno. S. Ganson, Buffalo; Hamilton White, Syracuse; George H. Mumford, Rochester; Miles P. Sampson, Le Roy; George W. Rogers, Lockport; C. H. Merriman, Auburn; Geo. W. Tefft, Buffalo; J. B. Williams, Ithaca; A. G. Story, Herkimer; P. Outwater, Jr., Syracuse; G. W. Cuyler, Palmyra; and D. H. Rasbach, Chittenango.

This body reassembled at the City Hall at 9 o'clock on Tuesday morning. The committee appointed to prepare a plan for the redemption of the notes of the banks of the State, made their report, recom-

mending:

That a common agency or clearing-house for the redemption of bank-notes, be established in the city of New-York: that all the country banks, members of the association, transmit to such agency all their country bank-notes, for which they shall be credited by the agency the amount thereof, less one quarter of one per cent; that such agency shall return to each member of the association its own notes, charging them the amount thereof, less one fifth of one per cent, the debtor banks arranging with their corresponding banks in the city of New-York, to pay, on the requisition of the manager of the agency, the balances due from them respectively, and the balances due to creditor banks to be paid by the manager to their credit, in their corresponding banks; that each member of the association shall furnish to the agency a moderate per centage on its circulation, (the amount to be hereafter fixed,) for the purpose of redeeming such country bank-notes as shall be offered, otherwise than through the associated bankswhich rates shall be returned in the same manner and at the same rates. In case the necessary expenses of the agency shall exceed its income from its business, such excess shall be assessed upon the members of the association according to their redemptions. That it be referred to a committee of five to digest and prepare a plan in detail, according to the above general provisions, and to submit the same to the several banks for their approval and adoption, and that when the same is adopted by at least fifty of the banks, the committee take the necessary measures for putting the plan in operation.

After some discussion as to the practicability of this plan, a motion that the report of the committee be adopted, was unanimously carried.

The committee of five recommended in the report was then appointed, the President of the Convention being, on motion, made chairman of the same. The committee is as follows: George W. Cuyler, of Cuyler's Bank, Palmyra; George W. Tefft, of the International Bank, Buffalo; George H. Mumford, of the Union Bank, Rochester; Hamilton White, of the Onondaga County Bank; Wm. R. Osborne, of the Bank of Binghamton. E. B. Judson, of the Salt Springs Banks, and S. D. Hungerford, of the Hungerford's Bank,

were afterwards added to the committee, making it a committee of seven.

This committee will at once proceed to the arranging and maturing of the plan proposed for the establishment of a clearing-house for country banks, and will then submit the same for approval to the various country banks in the State, which will then (or so many of them as may be favorably disposed to the project) organize the association on the basis recommended, and open a house in New-York for the redemption of their own notes.

Just before the adjournment, a motion was made and carried that the committee be requested to take into consideration the project of a Bank Express, which it is thought will be needed under the new

arrangement.
The following is a list of the banks w

The following is a list of the banks which were represented on this occasion, out of one hundred and fifty-seven that were invited to join:

Bank of Attica—A. J. Rich. Sackett's Harbor—J. C. Dann. International Bank—G. W. Tefft. New-York & Erie Bank—John S.

White's Bank—Mr. Williams, J. B. Griffin.

Niagara River Bank—G. W. Rogers. Exchange Bank, Lockport—Mr. Keep. Western Bank—C. A. Morse. Medina Bank—

Union Bank, Rochester—A. Erickerson, G. H. Mumford.

Cuyler Bank—G. W. Cuyler.
Broome County Bank—T. R. Morgan.
Bank of Seneca Falls—E. Patridge.
Bank of Whitestown—I. J. Gray.

Onondaga Bank—Geo. J. Gardner. Hungerford's Bank—S. D. Hungerford.

Bank of Silver Creek—G. W. Tew. Citizens' Bank, Fulton—George Gros-

Fulton County Bank—J. McLean. State Bank, Sacketts Harbor—E. B.

Chittenango Bank—D. H. Rasbach, G. Crouse

Bank of Binghamton-Wm. R. Osborne.

Herkimer County Bank—A. G. Story. Mechanics' Bank, Syracuse—P. Outwater, Jr.

Crouse Bank, Syracuse—A. T. Butler.

COMMERCIAL BANK, M.D., Kingston, June 30, 1855.

The net profits of the year, after deducting probable losses, were £74,650: and after paying a dividend of  $7\frac{1}{2}$  per cent, and reducing the real estate account £2000, there had been added to the reserve fund the sum of £27,254, raising it to £101,116 17s. 7d.

The capital stock of the company is about to be increased by £250,000, distributed to the shareholders at par, or a bonus of 8 per cent on their stock to those who are unable or unwilling to take new shares. The affairs of the institution are highly satisfactory, and reflect the greatest credit upon its officers; indeed, the Banks of Canada, in management and stability, are second to none in the world, and however slow our neighbors may deem us in some things, as financiers, Canadian bankers bear the palm, on this continent.

The following gentlemen were elected directors for the year: Joseph Bruce, Esq., Hon. J. Hillyard Cameron, Hon. John Hamilton, Francis A. Harper, Esq., Luther H. Holton, Esq., Hon. John Macauley, Hon. John A. Macdonald, John Macpherson, Esq., Douglass Prentiss, Esq., Maxwell W. Strange, Esq.

The public press of Montreal and Kingston bear witness to the liberal management of the Bank, and to its effective aid to the manufacturing and commercial branches of the community.—Kingston paper.

BANK OF MONTREAL, Montreal, May 19, 1855.

It is to be hoped that both Canada and Great Britain will soon be relieved of the old and miserable currency of pounds, shillings, and pence: and adopt the only mode fit for a commercial people, namely, the decimal currency.—En. B. M.

LOSSES BY MAIL.—We learn that a letter containing a note for five hundred dollars has been found by Mr. Peter Shunck, of Howard county, among some waste paper purchased at the Baltimore Post-Office. The letter was directed to the Cashier of the Exchange Bank of Virginia, at Abingdon, and was from Mr. Alexander Burg, of New-York. The note was transmitted for the purpose of collection. The late finding of a letter containing a check and money for upward of \$10,000 should have made the employés sufficiently cautious so that the accident may not occur again.—American.

<sup>\*</sup> The official table published at Boston did not include the items of the Malden Bank and the Monson Bank. We include them in this return.

<sup>†</sup> This includes the statements of the Pemberton Bank, Lawrence, and John Hancock Bank, Springfield, which were omitted in the official report.

# FLUCTUATIONS IN STOCKS AT NEW-YORK.

In the Months of April, May, June, and July, 1855—Continued from page 802, April No.

### MISCELLANEOUS.

\* Spurious Bills.—The brokers of this and others cities, state that there has been a marked increase lately, in the number of counterfeit bank-bills thrown upon the community. This is the result of a greater proficiency, as engravers and printers, among the counterfeiters; and of loose laws on the subject of bank-note plates. Genuine plates of exploded banking concerns, with the best workmanship, have got into the hands of counterfeiters, by purchase: the names of the banks have been altered readily, so as to be similar to that of a well-established bank. Thus the community is imposed upon by fraudulent bills, printed from the most elegantly-engraved plates, from our best artists.

Some of our leading bank-note engravers obviate this risk by refusing to yield possession of a bank-note plate after its execution. They will contract to do all the printing that may be required, but make it a preliminary rule that the plate shall

remain in their custody.

Bank-notes have been lately and successfully imitated by the photographic process so completely, as to defy the closest scrutiny of the bank officers. This difficulty can be thoroughly obviated by the use of large letters in red ink on the back or across the face of the bank-bill. Photography cannot, as yet, imitate bright colors when combined with black in the same impression or the same sheet.

COUNTERFEITERS.—A man having been recently committed for trial at Bellefontaine, Ohio, for passing a counterfeit bank-bill on a Connecticut bank, was discharged by the judge on the ground that the uttering of a foreign bank-note under the denomination of ten dollars, was not a crime, according to the laws of Ohio. We should say that the laws of Ohio need amending in this respect. A fine state of things, passing counterfeit money on other State banks, not a crime in Ohio!

Canada.—We learn that some of our leading houses here have of late set themselves strenuously against the vexatious and dangerous system of renewals. Refusal to grant such uncertain terms of credit, once seriously begun, there is very little doubt that the success of those who are the first in the field will soon justify the wisdom of the course they adopt. For the buyers who can pay, and mean to pay, short credit, accompanied by corresponding advantages, will always be found, when understood, to have very considerable attractions.—Montreal Herald.

PLATE-GLASS.—The casting of plate-glass was commenced at the Glass Works in Lenox, the last day of May. To the superintendent, J. N. Richmond, belongs the credit of casting the first plate-glass ever made in this country. The first plates were cast with entire success in the presence of some two or three hundred interested spectators. The plates are six feet by twelve, and each casting requires about three minutes. The sheets are taken from the mould while of a white heat, and placed in the annealing furnace. They are afterwards cut into plates of the required sizes. Americans only are employed in the works, and the materials for the glass are all found in Berkshire county. The pipe clay of which the pots for containing the melted glass is made, is brought from Germany.—Springfield Republican.

ALTERED DRAFTS.—A check, drawn by the Burnet Bank, Syracuse, upon the Bank of the Commonwealth, New-York, for fifteen dollars, was altered by the purchaser or holder to pifteen hundred dollars, and negotiated through one of the Buffalo banks in July; transmitted by the latter to the American Exchange Bank, New-York, by whom it was presented for payment. The Teller of the Bank of the Commonwealth, Mr. Ogden, detected this fraudulent alteration, and payment was refused until the Burnet Bank could be heard from. Country banks cannot be too careful in taking bills or drafts from parties not well known. In this case the alteration was effected by extracting the original ink from the body of the bill, and filling it with a new ink and for the larger sum. Frauds of this kind can be avoided by having a series of numbers on the margin of each check—100, 200, 300, etc.—and by punching a hole through the sum for which the check may be drawn. This plan has been pursued for many years by numerous banking institutions.

### BANK ITEMS.

NEW-YORK.—William A. Booth, Esq., has been chosen President of the American Exchange Bank, New-York. George S. Coe, Esq., succeeds Mr. Booth as Vice-President, and Robert S. Oakley, Esq., takes the place of Cashier, as successor to Mr. Coe.

Union Bank.—Daniel Ebbets, Esq., has resigned the cashiership of the Union Bank, after a service of about thirty years, and is succeeded by Edward H. Arthur, Esq., who has been Assistant-Cashier for several years.

Canajoharie — D. H. Fonda, Esq., Teller of the Spraker Bank, Canajoharie, was, on the 23d June last, elected Cashier of that Bank.

New Banks in New-York.—A new Bank is in progress of formation, to be owned and controlled by the German and French importers, with a large capital. It is understood that Mr. E. S. Ballin, of Ballin & Sander, is to be the President, temporarily at least, and Mr. Asher Kursheedt will probably be selected as Cashier.

The new Croton Bank, being organized by the defeated Directors of the Broadway Bank, has, we hear, already \$750,000 subscribed to its capital stock. The amount needed is \$1,000,000. We do not hear any names mentioned for the president or cashier.

VERMONT. — The Bradford Bank, at Bradford, has now a capital paid in of \$100,000.

MASSACHUSETTS.—The Martha's Vineyard Bank, at Edgartown, Dukes County, has been organized by the election of nine Directors. Daniel Fisher, Esq., was elected President, July 7th.

Boston.—S. S. Blanchard, Esq., has been elected Cashier of the Hamilton Bank, in place of Otis Turner, Esq., deceased.

RHODE ISLAND.—William C. Townsend, Esq., has been elected Cashier of the Weybosset Bank, Providence, in place of Luke Green.

New-Jersey.—The Farmers & Mechanics' Bank, at Camden, will commence business in a few days. Albert W. Markley, Esq., President; David R. Maddock, Esq., Cashier.

PENNSYLVANIA.—The Mechanics' Bank at Pittsburgh will commence business shortly. Capital authorized \$500,000, of which \$225,000 has been paid in. Reuben Miller, Jr., Esq., President; George D. McGrew, Esq., Cashier.

Eric.—James G. Lawton, Esq., was on the 27th of June elected Cashier of the Eric City Bank, in place of John P. Sherwin, Esq., who has been Cashier of the Bank since its organization, and has now resigned.

Pittsburgh.—John Harper, Esq., was on the 17th July elected Assistant-Cashier of the Bank of Pittsburgh, and authorized to sign all checks, notes, and other documents that require the signature of the Cashier.

Bank of the United States.—The Trustees of the Bank of the United States advertise at Philadelphia, in order to make a final dividend from and out of the estate and assets in their hands, conveyed to them by the deed of 1841, and to make distribution of the surplus remaining after payment of all the notes and deposits secured thereby, both principal and interest, for all claimants to come forward and prove their debts by the 20th of September, 1855. Persons are notified that no creditor can be entitled to receive such dividend who shall not have proved his debt before the time appointed, and also, that from and after such final dividend, no creditor shall or can have any claim upon the remaining fund, if any there be, nor upon the said Trustees, their successors or assigns.

New Banks in Pennsylvania.—The Harrisburgh Telegraph contains notices of the following applications, to be brought before the next Legislature, for new banks and for additional capital:

Bank Items.

VIRGINIA.—Andrew Kennedy, Esq., has been elected President of the Bank of the Valley, Charlestown, Jesterson county, Virginia, in place of Thomas Greggs, Esq., resigned.

NORTH-CAROLINA.—At a meeting of the stockholders of the Bank of the State of North-Carolina on Monday, July 2d, the new charter granted to that institution was rejected by a vote of eight to one. It was unanimously decided that the State had no right to vote.

Wilmington.—Twenty-five per cent of the capital stock of the Bank of Wilmington is required to be paid on or before August 1st. John McRae, Esq., has been elected President.

ALABAMA.—The Central Bank of Albama will commence operations at Montgomery on 1st September next. President, William Knox, Esq.; Cashier, John J. Noble. Esq. The capital at present paid in is \$250,000. A further instalment of \$100,000 will be due and payable on or before 16th September, \$100,000 on 16th of November, and \$50,000 on or before 16th January next—making in all \$500,000. The charter provides that the capital may be extended to \$1,500,000, the State to own two fifths of the increase. No stockholder can borrow upon his stock until the whole shall be paid.

SUSPENDED INDIANA FREE BANKS.—The Auditor of State notifies those holding the circulating notes of the following banks:

Traders' Bank at Nashville,
Elkhart County Bank,
Bank of Attica,
Atlantic Bank at Jackson,
Orange Bank,
Bank of Albany,
State Stock Bank of Indiana at Peru,
Bank of Bridgeport,
Bank of America at Morocco,

Public Stock Bank, Newport,
Merchants' Bank, Springtield,
Green County Bank, Bloomtield,
Government Stock Bank, Lafayette,
Laurel Bank,
Bank of Connersville,
Wabash Valley Bank, Logansport,
Bank of T. Wadsworth, Michigan City,

to return the same to the Auditor's office, Indianapolis, for cancellation, that the outstanding circulation may be determined as accurately as possible, and a pro rata dividend thereon declared. Certificates for the amount returned will be issued, and the dividend on the respective banks paid upon the presentation of the certificate at that office after the 1st day of October next.

Bank Items.

The bank statements for the past month show a larger movement in loans and deposits. The aggregate loans are greater than at any period within the past eighteen months; and the deposits have increased ten millions since the first week in April. The following banks show a discount line double that of their capital: Manhattan Company, Merchants', Mechanics', Bank of America, Phenix, Tradesmen's, Fulton, Chemical, Merchants' Exchange, Butchers & Drovers', Mechanics & Traders', Greenwich, Leather Manufacturers', Seventh Ward, American Exchange, Bowery, Broadc. Bank of Republic, People's, Grocer's, Nassau, N. Y. Dry Dock. way, Mercentlio

The sales of sak shares during the past month, were on a very limited scale, but at improved prices. Bank sto ks are generally held for permanent investment, and hence they form but a small part of the stock operations of the day. In some cases the shares of a bank are not brought into the market once in a year, others only occasionally. The advance in quotations during the past few weeks has been stoady, showing renewed confidence in them as dividend-paying shares.

| Mechanics' Bank, 200,000  |       |       |       | 8     | 8     | 4     | 5  |  |

The Atlantic Bank declared a dividend of ten per cent July, 1855, leaving a surplus fund of \$80,501, or sixteen per cent of its capital. Heretofore the dividends have been made in March and September. Here-fier they will be declared in January and July.

The Brooklyn Bank commenced business February 24, 1882. Dividend months, February and August.

The Central Bank commenced business October 10, 1853. Dividend months, January and July.

The City Bank commenced business December 12, 1850. Dividend months, February and August.

The Long Island Bank commenced business in the year 1820, as a chartered bank, and in the year 1846, under the free banking law. In 1851, a dividend of 88% in stock was declared, besides five per cent in cash.

The Mechanics' Bank commenced business August 24, 1852. Dividend months, January and July.

The Ontario Bank of Canandaigua has declared a dividend of five per cent for the past six months. The surplus profits of this institution indicate, that another dividend of five per cent will be declared in November next; and that upon the expiration of the charter in January, 1856, the

<sup>\*</sup> Former dividends in May and November.

<sup>†</sup> Final dividend, of surplus profits.

stockholders will receive a final dividend of twelve per cent. The Bank has been so fortunate of late years that it has, at present, no discounted bills or notes lying under protest. This fact speaks volumes for the financial abbidies of the Directors, and of their Cashier, Mr. Henry B. Gibson, who has held that position over thirty-five years.

Philadelphia.-Bank of North America, 8 per cent; Bank of Pennsylvania, 5 per cent.

Tennessee .- Planters' Bank of Tennessee, 5 per cent.

Kentucky, - Bank of Kentucky, 5 per cent; Northern Bank of Kentucky, 5 per cent; Bank of Louisville, 4/2; Southern Bank of Ky., 4%; Farmers' Bank of Ky., 5.

New-Orleans, Union Bank of La., 5 per cent; Bank of New-Orleans, 5 per cent; Southern Bank of N. O., 4 per cent; New-Orleans Canal & Banking Co., 5 per cent.

Missouri. - Bank of State of Missouri, St. Louis, 5% per cent.

### Notes on the Money Market.

NEW-YORK, JULY 26, 1855.

Exchange on London, at sixty days' sight, 9% a 10 per cent premium.

THE aspects of the money market are certainly more cheering than have been presented for some years past. Every branch of business is reduced to and reëstablished upon a safe and permanent basis, and if undue speculation be avoided, the country will be soon measurably out of debt. Money is abundant on first-class securities at 5 to 6 per cent; and on good business paper at 6 to 8 per cent. Loans on call with first-class securities, are readily obtained at 4 to 6 per cent.

The amount disbursed since 1st instant, for dividends and interest on bonds, etc., in this city alone is estimated at over \$4,000,000, certainly a larger sum than ever paid before in this city at any corresponding period. It is satisfactory to stockholders in our numerous railroad corporations and others, and to bondholders generally, that the semi-annual interest on these largely accumulating securities, has been punctually met. No default has been made that we are aware of. The large amount due and payable on State, city, county, and railroad bonds, has been promptly provided for. The county bonds of Missouri, Ohio, and Kentucky have been protected by their financial agents here. All the Western railroad interests have been duly provided for. The course of exchange in Europe is somewhat against us and causes further shipments of coin from New-York and Boston. In this respect, however, the past six months are more favorable than for the half-year ending in December last. The exports of coin from the two ports for the six months ending 1st instant being \$25,098,697, namely:

|           |                   |   | New York.    | Boston,             |
|-----------|-------------------|---|--------------|---------------------|
| January   |                   |   | \$156,898    | \$294,735           |
| February, |                   |   | 2,123,708    | 618,791             |
| March,    |                   | <b> </b>                                | 2,298,697    | 1,926,232           |
| April,    |                   |   | 8,318,447    | 1,574,787           |
| Мау       |                   |   | 5,820,159    | 1,865,541           |
| June,     | • • • • • • • • • | • | 8,562,898    | 1,744,817           |
| Total six | months,.          | · • · • • · • • • • • • • • • • • • • • | \$17,074,795 | \$5,028,90 <b>2</b> |
| " Tv      | velve mon         | ths, 1854 5,                            | 35,658,334   | •                   |
| ••        | 44                | 1853-4,                                 | 84,304,241   |                     |
|           | 44                | 1552-3,                                 | 21,127,238   |                     |

This apparent loss of fifty millions per annum is in some measure compensated for by the influx of gold coin in the hands of immigrants. This is estimated by foreigners to be fully ten millions of dollars annually.

The export of coin to Europe is greater than for some years past, but the supply from California is quite equal to the demand for liquidation of the indebtedness of the country to Europe. The total foreign export to 21st instant from New-York was, in

| 1855,\$18,363, | 561 18         | 5 <b>3,\$</b> 10,997,S18 |  |
|----------------|----------------|--------------------------|--|
| 1854, 18,122,  | 5 <b>63</b> 15 | 52 14,411,008            |  |

From California we have dates to 1st instant. Notwithstanding the mines were never more prolific since the discovery of gold on the Pacific coast, the exports of precious metals for the last six months fall far below those of a corresponding period of last year. From the published statements of shipments we compile the following comparative statement of gold shipped by steamers during the first six months of 1854 and 1855:

|          | 1854.       | 1855.       | 1854.                | 1855,                |
|----------|-------------|-------------|----------------------|----------------------|
| January  | \$3,454,920 | \$3,905,790 | May,\$5,083,059      | <b>\$</b> 3,5\$5,320 |
| February | 3,622,876   | 2,892,014   | June 16th, 2,245,222 | 1,930,530            |
| March,   | 4,023,563   | 2,329,256   |                      |                      |
| April,   | 4,462,105   | 8,587,986   | Total, \$22,571,245  | \$17,681,146         |

The importations for the fall trade are now coming in, showing a marked increase in the amount of duties paid into the Custom-House. There were last week \$962,956, or about \$160,000 per day. The tethargy that has pervaded the spring trade will now, in consequence of a cheap money market, be followed by more activity. The Western merchants will, by means of flour, corn, and pork, be able to liquidate old balances and buy more largely than before.

The banks of this city have increased their loans from \$82,000,000 on 1st January, to about \$99,000,000 at this date. The following is a summary of their operations since June 1st:

|                | Loans.       | Specie.      | Circulation. | Deposits.            | Şub-<br>Treas'ry. | Banks and<br>Sub-Treas. |
|----------------|--------------|--------------|--------------|----------------------|-------------------|-------------------------|
| June 2, 1955   | \$91,197,658 | \$15,897,674 | \$7,555,609  | <b>\$</b> 76,843,236 | \$2,454,500.      | <b>\$</b> 17,852,100    |
| June 9, 1855,  | 92,109,097   | 15,005,155   | 7,502,568    | 77,128,789           | 2,358,200         | 17,855,300              |
| June 16, 1855, | 98,100,385   | 14,978,558   | 7,452,161    | 77,849,454           | 2,261,300         | 17,239,800              |

| June 80, 1855, | 95,578,212   | 15,641,970   | 7,394,964    | 81,908,965           | 1,956,700         | 17,598,600              |
| July 7, 1855,  | 97,852,491   | 15,381,098   | 7,743,069    | 85,647,249           | 2,094,500         | 17,465,500              |
| July 14, 1555, | 99,521,002   | 16,756,506   | 7,515,724    | 85,664,186           | 2,115,400         | 18,679,100              |
| July 21, 1855, | 99,029,147   | 15,919,000   | 7,407,056    | 82,079,590           | 2,778,000         | 18,697,000              |

The prospect for American capital and capitalists is highly favorable. The whole country is highly prosperous, if we except, perhaps, the woollen manufacture, and for this last there seems to be a more favorable opening. The harvest, from Maine to Florida, and throughout the great West, will probably yield more this year than at any former season. There is already evinced a renewed activity in manufactures, and ample reward for the investments of capital in the various branches of trade.

At present no new railroad enterprises will be encouraged. Too much was attempted in 1853-4; and too much accomplished for profit. It is believed here that no new railroad schemes will be brought forward or urged. The present prices for railroad shares and bonds, show vast losses from investments of this character, and it is clear that the West has drawn too largely upon Eastern capital, to be further encouraged until the roads now in course of construction shall be demonstrated to be remanaged.

State loans are in demand and the supply moderate. Bank shares maintain former quotations, and the demand is rather greater than the supply on the market. As the fall trade advances there will be a more active money market to meet the wants of both the East and the West. This will affect stocks gene ally and fancy shares especially; but we think State loans and bank shares will go to higher figures.

The Realing Railroad Company have declared a dividend of 4 per cent. Under the recently favorable reports of this Company the stock has reached 96 during the month, and is now quoted 88  $\alpha$  89, dividend off.

The Lake E ie, Wabash, & St. Louis Railroad Company have just negotiated with a party of New-York capitalists \$600,000 of their second mortgage bonds, being the residue of the issue. This sale will furnish sufficient money to complete the road to the State line. That portion of the road from Toledo to Fort Wayne, 75 miles, opens for business this week. It will have a good local business until the Southern connections are made, and will add considerably to the business of the Cleveland & Toledo Road, with which it connects at Toledo.

The D-laware, Lackawanna, & Western Raliroad Company have negotiated \$600,000 of mortgage seven per cent bonds at favorable rates.

The State of Pennsylvania offered for sale this week at public auction, its public works at a minimum of seven and a half millions of dollars. There was no offer and the sale was adjourned and die. The Harrisburgh papers state that the semi-annual interest due on the public debt of the State will be punctually met on 1st of August without the usual resort.

Amongst the acts of the late Connecticut Legislature, was one authorizing the New-York & New-

Haven Railroad Co., to adjust and compromise the claims arising out of the Schuyler fraudulent issues of stock. For this purpose they are empowered to increase their capital, divided into shares of \$100 each. The act is not to take effect until accepted by the stockholders; and it is provided that nothing which it contains shall be construed to give validity or effect to any pretended shares wrongfully created. Another act authorizes the Company to issue 7 per cent mortgage bonds, for the purpose of retiring any of the bonds of the Company now outstanding, and for the purpose of paying any just claims against the Company. This act also must be accepted by the stockholders.

The rates for money in the street are quite favorable to borrowers. First-class business paper has been done at 5 a 6 per cent in some few instances; but the ordinary rate is 6 a 7 per cent. In Boston the rates are about 1 per cent higher than in this city.

The Syracuse Bank Convention did not adopt a plan of par redemption for the notes of the New-York country banks. In order to make the plan satisfactory to the community, the banks should be divested of all profit arising from the redemption of their circulation. Until this shall be done, the admirable policy adopted by the Suffo k Bank (whereby thirty or forty millions of dollars in bills are maintained at patr) cannot be followed here.

Intelligence from London to the 13th inst., shows that the English market is abundantly supplied with capital at 3 a 4 per cent. The highest price reached for consols in June, was 93%, and the lowest 91%. The following are the fluctuations in the English and foreign stocks during the month of June last:

|                          | Engl                | ish Funds.  |             |                      |
|--------------------------|---------------------|-------------|-------------|----------------------|
|                          | Price on<br>May 29. | Highest.    | Lowest.     | Price on<br>June 28. |
| Consols,                 | 92 to 92%           | 93⅓         | 91 %        | 91%                  |
| Exchequer Bills' average | 6s to 20s           | 23s pm.     | 18s pm.     | 14s to 16s. pm       |
|                          | FORE                | IGN STOCKS. | t           |                      |

| Buenos Ayres,            | 55 ¾                | 60          | 54          | 54                   |
| Chilian,                 | _                   | 103 🖌       | 102         | 102                  |
| Dutch 21/4 per Cent,     | 64 1/4              | 64 16       | 63×         | 64                   |
| Mexican,                 | 2216                | 22 🔏        | 21%         | 21%                  |
| Peruvian 4% per Cent,    | _                   | 69⅓         | <b>6</b> 8% | <b>6</b> 8¥          |
| Portuguese 4 per Cent,   | _                   | 45          | 44          | 44%                  |
| Russian,                 | _                   | 100%        | 99          | <b>9</b> 8%          |
| Spanish                  | <b>8</b> 814        | 89          | 88          | 88¥                  |

From this it would appear that of all the Continental stocks on the London market, the Russian five per cents maintain the highest quotations.

Advices from Hamburgh refer to the approaching establishment of a new joint-stock bank, under the title of the North German Bank, with a capital of 15,000,000 marks banco, in shares of 500 marks each, of and with power to double the capital at the end of three years. Application has been made to the Senate of Hamburgh for a charter for 99 years. Operations are to be commenced as soon as 30 per cent of the capital shall have been paid up.

The British government has appointed a commission of three persons to inquire into and report upon the Decimal Coinage System. The gentlemen named are Lord Monteagle, Mr. Hubbard, and Mr. Norman.

### DEATHS.

IN BOSTON, Mass., July 11th, Joseph Tillson, Esq., President of the Broadway Bank, South-Boston, aged fifty-three years.

IN BOSTON, Mass., Saturday, July 21st. OTH TURNER, Esq., Cashier of the Hamilton Bank in that city.

# BANKERS' MAGAZINE,

AND

# Statistical Register.

Vol. V. New Series. SEPTEMBER, 1855. No. III.

Von al Lozzakiowa

### ON THE DUTIES AND RESPONSIBILITIES OF A CASHIER,

AND THE LIABILITIES OF BANKS AS AGENTS.

RECENT transactions connected with the Mechanics' Bank of the city of New-York, and with other monied institutions, will serve to show that the duties, rights, liabilities, and responsibilities, and even the official income of a cashier, are not in general either properly defined or clearly understood. This remark applies as well to boards of directors as to cashiers themselves. An official appointment is frequently conferred upon a gentleman as cashier, and he assumes the arduous and responsible duties of such a position, without that clear and explicit understanding between himself and his bank managers which is actually essential to the interests of the institution, and to his own proper position and independence.

It is taken for granted, generally, in such cases, by the board, that the cashier knows his duties and rights; and the cashier is apt to assume that his understanding and that of the board are sufficiently and reciprocally understood, and that there is no occasion for any misapprehension. But how often is it that this confidence is misapplied—that the parties really do not or did not understand each other, and hence a frequent collision in their respective duties?

And then, again, how often is it that the cashier does not fully and adequately study his profession-inform himself as to the many and important questions pertaining to his daily official duties, and seek to economize the labor and expenses of his institution by the adoption of improvements in the machinery of the bank? All this can be to day to the contract that my presto log it is

done by a judicious and efficient officer. There are a thousand ways in which the simple duties of a bank—its daily routine—may be arranged, modified, improved; thereby saving time and money to the stockholders. He should be fully posted up on the subject and law of bills of exchange, promissory notes, coins, coinage, bullion, exchange, the principles of currency and sound banking.

It was only a few weeks since that the cashier of one of our city banks proffered a deposit of \$20,000 at the Sub-Treasury, in small silver coins of the United States, of a late date, and requested gold in exchange. He was much surprised and rather indignant when it was intimated to him that such coins were not a legal tender beyond five dollars, and that the exchange could not be effected.

Among the multifarious details connected with the banking business of this and other large cities, a new phase appears in the assumption of duties and operations by a cashier, that are totally independent of the bank itself. Commissions are frequently intrusted to a cashier, as an individual, for the purchase or sale of foreign exchange, stocks, time-bills, etc. In this operation, the funds of the correspondent are used, and the commission or profit thereon enures to the benefit of the cashier.

This is all well enough, if such a business be done with the know-ledge and assent of the board of directors; and the bank itself is not implicated in any loss arising from the misapplication of the moneys, or in any laches on the part of the cashier. Frequently, we have reason to believe, the correspondent assumes that such agency is undertaken by the bank itself, and that the bank is liable, as agent, in the transaction, and for its faithful execution, when, in fact, the bank cannot, by its charter or articles of association, transact such business, and the operation devolves upon the cashier or president, as an individual, and to his own personal profit.

Hence the necessity of a critical examination, by every bank officer, of the law of agency—the rights and liabilities of banks as agents. A few years since, the cashier of a Wall-street bank was appointed transfer-agent for one of our New-York State railroads, and he accepted the agency, as it would add a few hundred dollars to his annual income, with slight extra labor. But the Company properly required that the bank should, by a resolution, authorize such acceptance, and thereby render the latter liable for any laches on the part of the agent. This requisition was complied with. It would have been well if the Bank of Kentucky had exacted this (mere matter of) form from the Schuylkill Bank, when the cashier of the latter was constituted transfer-agent for the former. But when the fraudulent transactions of the cashier were afterwards developed, the Schuylkill Bank was quite ready to say that it was not the agent; that Mr. Levis, the individual, was alone such agent. The Court, however, finally adjudged that the Schuylkill Bank itself was liable in the premises; and this decision swept its assets away entirely, and its stock is now nominally worth only one per cent.

In Smith's Compendium of Mercantile Law,\* the duties of a cashier

<sup>\* 1</sup> vol. octavo, pp. 755. Appleton & Co., New-York, 1855.

are fully commented upon, and the points laid down can be to advantage studied by bank presidents and bank directors. The author

says very properly, that

"The cashier of a bank is a commercial agent so common in our own country, that it is important to ascertain the extent of his authority. 'The cashier of a bank,' says J. Story, is, in virtute officii, generally intrusted with the notes, securities, and other funds of the bank, and is held out by the bank as its general agent in the negotiation, management, and disposal of them. Prima facie, therefore, he must be deemed to have authority to transfer and indorse negotiable securities, held by the bank for its use and in its behalf. No special authority for this purpose is necessary to be proved. If any bank chooses to depart from this general course of business, it is certainly at liberty so to do; but it is incumbent upon the bank, in such case, to show that it has interposed a restriction, and that such restriction is known to those with whom it is in the habit of doing business. Wild v. Bank of Passamaguoddy, 3 Mass. 505.

"The cashier has no authority to bind the bank by any agreement with the makers or indorsers of a note which is offered at bank for discount, by which the legal effect of the written instrument is varied or controlled. It is not his duty to make such contracts, and he has no authority to bind the bank, except in the discharge of his ordinary duties. Bank of the United States v. Dunn, 6 Peters, 51. Nor has he any power to accept bills of exchange on behalf of the bank, for the accommodation merely of the drawers. Farmers and Mechanics'

Bank v. Troy City Bank, 1 Dougl. 457.

"A cashier cannot be protected in any known departure from his official duties, either by the connivance or direct sanction of the board of directors; as, for example, in the case of a usage, to allow certain customers to overdraw, and to have their checks and notes charged up without present funds in the bank; a usage, in other words, to misapply the funds of the bank. No court of justice could countenance such a practice. Minor et al. v. Mechanics' Bank of Alexandria, 1 Peters, 46. The student will find the American cases collected in a note to Mr. Dunlap's edition of Paley on Agency, 156, Note 2.".

Such is the laxity of the rules in some cases laid down by banks for the government of their subordinates, that a cashier will sometimes feel himself entitled to the commissions arising from the execution of orders that were intended for the bank itself; and to the interest on funds that were confided to the institution on deposit. It has been semi-officially stated, in a recent case, "That the cashier has been in the habit of using the bank funds for his own personal advantage, which he has been able to do by the loose way in which the bank, like all the old banks, keeps its accounts. The bank, it seems, keeps no ledger account of its temporary loans. The securities for these loans are kept in a drawer under the care of the first teller, who, when the securities are redeemed, puts the cash received as interest into the same drawer, the accumulations of which are paid to the cashier monthly. This interest money, it is charged, the cashier has pocketed for his own emolument. This practice has

obtained for years. The average monthly receipts from this source are reckoned at \$150 per month.

"That the second teller received the profits on domestic exchange, of which he has kept a private memorandum for his own satisfaction, but no bank books contain a record of the transactions. The cashier received this exchange monthly; but sundry credits are given in the bank books, which amount to only \$500 more than these commissions alone, without regard to the interest money received for short loans.

"Again: That in the year 1852, the cashier used \$12,000 of the old bill circulation, all in one thousand-dollar notes, which had been put into a chest kept by himself, as not intended for circulation. This, it appears, he loaned to certain brokers, who paid off a loan for that amount to the bank, and re-borrowed it from him personally. The bills were, two years afterwards, paid into the bank without interest, which amounted to \$800.

"Again: That the cashier individually drew out large sums on his checks, which checks were kept in a drawer for months, without being charged to him; and when the money was returned, no interest was credited to the bank.

"And also that the cashier appropriated to himself the remuneration due to the bank for keeping the transfer-books of other companies."

These assertions show, among other things, that the cash transactions or books of the bank were not kept with that due regard to system and to checks and counter-checks, which is essential to test their accuracy.

One of the most important questions for examination by a bank, is its liabilities to its customers for laches on the part of its agents in the collection of paper; and another, perhaps more important, is the liabilities of a bank to its customers for laches on the part of its notary in the protest of collection-bills.

Many banks assume, that having sent collection-paper to their correspondent, they are released from liability to their customers for losses arising from neglect by, and laches of, such correspondent, or their notary; and that the customer must look only to such correspondent for indemnification, in case of loss arising from such neglect.

This position we believe cannot be maintained. In Mr. Smith's volume (before extracted from) it is held that

"The deposit of a bill in one bank to be transmitted for collection to another, is a common usage of great public convenience. The benefit which the collecting bank derives from the use of the funds whilst in its custody, and the profits on exchange, are a valuable compensation for the labor and expense to which the business subjects it, and constitute such bank, in acting for others, an agent for reward; and of course clothe it with the responsibilities belonging to that character. If the principal sustains any damage from the failure of the bank to use due and legal diligence in the performance of its duty, the bank will be responsible to him in an action on the case. Bank of Washington v. Triplett, 1 Peters, 25. Fabens v. Mercantile Bank, 23 Pick. 330. Bank of

Utica v. Smeade, 3 Cow. 662. Mechanics' Bank at Baltimore v. Merchants' Bank at Boston, 6 Metc. Rep. 13. Van Wart v. Wooley, 3 Barn. & Cres. 419. To fix the responsibility of the bank, two facts must be established; first, that the drawer or indorser has been discharged; and second, that this result has been owing to the neglect or want of due skill on the part of the bank. It is a very interesting and important question, whether a bank receiving a note for collection, and placing it in the hands of a notary in time for demand and payment, is liable for the neglect of the notary to give notice, if it is the cause of actual damage."

As to the losses arising from the laches of a notary, the same writer urges:

"In some of the cases, it has been held that the bank is not responsible for the negligence or misconduct of the notary, if it used reasonable care and diligence in making the selection. Such is said to be the general rule, wherever it is necessary for one agent to employ a sub-agent to transact the business. Bellemire v. Bunk of the United States, 1 Miles, 173. Hyde & Goodrich v. Planters' Bank of Mississippi, 17 Louisiana Rep. 560. Tiernan et al. v. Commercial Bank of Natchez, 7 How. Miss. 648. East Haddam Bank v. Scovill, 12 Conn. Rep. 303. Dorchester & Milton Bank v. New-England Bank, 1 Cush. 177. The same doctrine was held by the Chancellor and Supreme Court of New-York, in the case of Allen v. The Merchants' Bank, 22 Wend. 215. But the Court for the Correction of Errors reversed the judgment below in the last case, and declared the law to be, that in the absence of any express contract, a bank in New-York receiving for collection a bill of exchange drawn there upon a person in another State, was liable for any neglect of duty occurring in its collection, whether arising from the default of its officers at home or its correspondents, and that the neglect of a notary, who was a commissioned public officer, did not vary the rule. He acted pro hac vice, merely as the agent of his employers, and not in his official capacity. In South-Carolina the rule has been settled as in New-York. Thompson v. The Bank of the State of South-Carolina, 3 Hill S. C. R. 77. Such agent must possess a competent degree of skill, in order to enable him to do so; if he engage without such skill, he is a deceiver, and will be justly liable for the consequences of his incapacity; he is, moreover, responsible not only for himself, but for those whom he may employ under him.

"The responsibility of an agent to whom commercial paper has been intrusted for collection, is considered very much at large by Chief-Justice Marshall, in the case of Hamilton, Donaldson & Co. v. Cunningham, 2 Brok. 350. The rule deduced from the authorities is, that the agent does not bear the same relation to his principal as the holder of a bill of exchange does to the drawer or indorser; but his responsibility is to be determined by the law regulating the relation of principal and agent generally. The actual loss sustained by the principal, in consequence of the misconduct of the agent, is the amount of damage for which the latter is responsible. In accordance with the same principles, it was held by Judge Story, in the case of

The United States Bank v. Goddard, 5 Mason, 366, that an agent is only bound to give notice of the dishonor of a note, which has been committed to him for collection, to his principal, the holder, and not to the indorsers, although the latter might receive information much sooner from him than the principal. 'The agency,' says J. Story, 'does not include any such duty. If the agent contracts with his principal to give such notice, it is a mere private contract between the parties, with which an indorser has nothing to do. It neither enlarges nor limits his rights. It may be inconvenient for him to receive a circuitous notice, but that is not sufficient to change the law. I think it would be far more inconvenient to establish the doctrine now contended for in the defence. All that is required by law is, that the holder should give notice to the indorser, in a reasonable time after he has notice of the dishonor, and that there should be no laches in getting that knowledge, if an agent has been employed.' S. P. Bank of the United States v. Davies, 2 Hill's Rep. 451. But the failure of an agent to give reasonable notice to his principal of the dishonor of a bill of exchange, which he has taken on the sale of his property, will render him an insurer of the solveney of the purchaser. Harvey v. Turner, 4 Rawle, 223. Forresteir v. Bordman, 1 Story's C. C. Rep. 44. See also Allen v. Suydam, 17 Wend. 368, 20 Wend. 321."

### LIFE INSURANCE.

The importance of life insurance to every class of the community is now becoming more fully demonstrated; and it is gratifying to us to record that more interest is taken in the question throughout the whole country. In our number for June last, we published a condensed summary of the operations of eleven companies, from which it would appear that their annual premiums and receipts in the last fiscal year exceeded two and a half millions of dollars, and the losses paid to policy holders were about nine hundred thousand dollars. These items in themselves will demonstrate that life insurance companies are among the noblest, wisest, and most beneficent institutions of the age; and the system of mutual life insurance, now so widely adopted in Great Britain and the United States, shows that each policy holder pays only the actual cost of insurance. In other words, whatever profits arise from the business at large accrue to the separate or individual benefit of the insurers.

It appears that one Company has recently sustained six losses of ten thousand dollars each, by death; and as the Company assumes risks of this amount only in rare cases, these losses are somewhat remarkable—one by lightning, and one killed by a runaway horse. The following table will exhibit the losses of the past six months, the occupation of each party insured, the amount of premium paid, and the amount paid to the heirs, etc. It will be seen how small are the premiums when compared with the losses paid:

Schedule of Losses paid by the Mutual Life Insurance Company of New-York, during the past six months, namely, from February to August, 1855.

| Mobile, Ala.,Merchant,                   | Killed by Runaway              | 993                          | 00 | 10,009   | 79        | Trustee for Children. |

Note.—This unusual list of accidental deaths from various casualties will be further increased by the recent death by lightning at Irvington, Westchester county, N. Y., of a late highly respectable merchant of this city, the holder of one of the earliest policies of \$10,000.

Late and reliable statistics have shown that the premiums charged on sound lives in the Southern States of this Union have not hitherto been sufficient to cover the cost; or, at all events, that no

profit arises from that branch of the business. It is of course a rule with all life insurance companies, in the adoption of fixed tables of rates, that all premiums shall bear due proportion to the risks involved. Now, as all the premiums of a company are merged in one common fund, it follows that the profitable departments of the business cover the losses of the others; and, as in the present case, that the larger profits of the Northern business are participated in by those at the South, whose premiums pay no profit at all.

A critical examination is now being made by competent parties into the comparative mortality of different sections of this country; mainly derived from the census statistics, mortality tables of several cities, and other reliable sources of information, so as to enable our life insurance companies to frame a more impartial tariff of charges,

adapted to the mortality of our whole country.

We have before us the quarterly statement of the Mutual Life Insurance Company of New-York, for the quarter ending July 31, 1855. This report shows the assets on hand,

| May 1, to have been                   | .\$2,950,060 |
|---------------------------------------|--------------|
| Premiums realized since,              | 225,315      |
| The leases since paid were CKI 001    | \$3,175,405  |
| The losses since paid were            | 81,069       |
| Leaving subsisting available funds of | \$3,094,336  |

It would appear that the receipts for the quarter were at the rate of \$900,000 per annum, and the losses for the quarter \$51,921.

The latter item is unusually heavy, and will be further increased by the death of one of our merchants by lightning. The liability of all persons to easualties of this kind, and to the numerous accidental causes of death, as well as to ordinary disease, should admonish every man in the community, having others dependent upon him, that life insurance is one of the wisest institutions of the age. To guard the aged, the widow, and orphan children from the evils of poverty and want, it is the duty of every father to secure a policy of life insurance.

### THE GRAIN CROP OF 1855.

I. Growth of Wheat in each State, 1847, '50, '55. II. States in which there is a Deficiency of Production when compared with Consumption. III. Export from the United States, 1847-54. IV. Average Production per acre and Period of Harvesting. V. States producing Surplus beyond Consumption. VI. European Wheat Crop.

The importance of the grain crops is such to every class of the community, that we have taken pains to form reliable estimates from the most available sources, as to the production of the present year throughout the United States. The general result, so far as the wheat crop is concerned, will be highly satisfactory to the whole country; and will show that while we have the greatest abundance for our own population for the next twelve months, we shall have a liberal surplus for export to Europe and South-America.

Some of the States show a product of from one hundred to five hundred per cent beyond that of 1847, the Irish famine year. This increase is almost incredible, but we think the returns for the current year will fully bear us out in our estimates, namely:

Estimated Production of Wheat in some of the Old as well as the New States and Territories in 1855, compared within 1847 and 1850, showing the vast Increase in the Supply:

1847 to 1850, no increase. 1850 to 1855, increase 120 per cent.

In the following tables, to which we direct the careful attention of the reader, it will be found that we differ materially from the calculations or estimates of some of our contemporaries. The latter were prepared without full research into the probable production of each State. The estimates were upon crude materials.

Nothing can demonstrate more strongly the present productive

power and the prospective wealth of the *Great West*, than the official tables of the grain crop of that region. From reliable data we show that Illinois alone will produce this year 16,000,000 of bushels of wheat, or nearly one tenth of the whole crop of the country. Ohio, 20,000,000; Indiana, 12,000,000; these three States producing more than one fourth of the whole.

Although the States west of the Mississippi do not at present make much show in the cereal crops, they will soon exhibit a stronger position. Missouri, Iowa, and Minnesota will, in a few years, produce as largely as Indiana, Illinois, and Michigan.

Our first table is a comparative exhibit of the product of the years 1847, 1850, and 1855, namely:

I. Estimate of the Growth of Wheat in the different Territories in 1855, as compared with the Production of 1847, as per Patent Office Report; and 1850, by Census Returns, etc.:

|                    | 1547.                     | 1850.           | 185%           |

|                    | 114,245,500               | 100,479,150     | 175,200,000    |

These estimates indicate a product of seventy-five per cent beyond that of 1850, or one hundred and seventy-five millions in the aggregate. If we allow 3} bushels of wheat per head annually, or one hundred millions of bushels, for home consumption, we shall then have on hand, for export or for future stock, about seventy-five million bushels.

The New-England States and some of the Southern States, are debtors to the West for their wheat and flour; and here the "harmony of interests" is beautifully demonstrated. The cotton of the South and South-West, and the cotton fabrics of New-England, go far to compensate the West for this indebtedness. The deficiency in these few States we estimate at about twelve million bushels, namely:

II. States in which there is a Deficiency in the Quantity produced for Consumption—allowing 3\frac{1}{2} Bushels to each Inhabitant in the Manufacturing, and 3 Bushels in other States:

| Q                                 | uantity Produced.                       | Consumed.<br>—-Bushels                     | Deficiency. |

III. As a vast source of income, and as a means of paying a heavy indebtedness to Europe, let us look at the aggregate value of our export of bread tariffs. And in this exhibit, we certainly have cause for congratulation, namely:

Exports of Breadstuffs and Provisions from the United States to Foreign Countries, for each Fiscal Year, from 1846 to 1854, namely:

| Year. | Valus.       | Year. | Value.       |
|-------|--------------|-------|--------------|
| 1846  | \$27,701,121 | 1851  | \$21,948,651 |
|       | 68,701,921   | 1852, | 25,857,027   |

|       | 26.051.873   | •     | • •          |

IV. We must look to the Mississippi Valley, and to the really far West, (Texas and Oregon,) for prolific soils. In order to show the relative productiveness of the several States, we have examined the subject carefully, and we think the following conclusions are very near the truth:

Table showing the Average Number of Bushels Per Acre and the Time of Harvesting in each of the Principal Wheat-growing States:

| States.         | _1 ver  | age Per A | re.      | Tin              | ne of Harvestin | ij. |

Many of our readers live "from hand to mouth," and few take the pains to collect, compare, and preserve the current statistics of the day—those that have an important bearing upon the vital interests of society. Hence we shall find that few persons can recollect the famine or short years, or the surplus years. To refresh the memories of our readers we will recur to the leading features of the past few years, as to the grain crops.

The spring of 1846 was remarkably favorable for wheat and all cereals. The supply for 1846-7 was extraordinary, and enabled us to export largely to Great Britain. Many cargoes were sent to relieve the suffering Irish.

In 1848 and 1849 the foreign export of breadstuffs declined, and in the latter year our agricultural interests were neglected: thousands rushed to California, forgetting that our wheat and corn, our iron and coal, were and still are of more value to us than the gold crop. Hence the product of cereals was barely sufficient for our own uses; and the year 1850 revealed the fact that the production of wheat had actually fallen off, as compared with 1847.

The winter wheat of 1854 was nearly half destroyed by the weevil in Ohio, Pennsylvania, Illinois, Indiana, and North-west Virginia, both before and after being harvested. The drouth injured the late crops, and thus caused a heavy demand upon wheat as food. The aggregate product was within ninety millions of bushels.

The year 1855 has exhibited remarkable weather—no previous season has been more propitious—and we think we have a grand result of one hundred and seventy-five millions of bushels, for consumption, export, and for seed.

V. In a small number of States the product and consumption of wheat are nearly equal; but with the majority there is a large surplus. These latter we enumerate in the annexed summary, with a resulting excess of ninety-five millions of bushels, namely:

States and Territories where there is a Surplus produced beyond the Consumption required for each:

|  | Quantity Produced.                      | Consumed. —Bushels.——                   | Excess.    |
|--|---|---|------------|

VI. We must not lose sight, however, of the fact that the harvest in Europe is very flattering. In Austria the harvesting of the grain crops commenced about the middle of July, and, with the exception of a few localities, the yield will be abundant.

Up to the last two weeks no signs of the potato disease have appeared in any of the German States.

The Prussian government has recently made inquiries in relation to the crops in all the districts of the provinces; the result promises an abundant yield of wheat, while rye will scarcely be an average yield.

In Egypt the fields promise a highly abundant crop, and the only fear latterly expressed was of an overflow of the Nile and the damage of their harvests.

We defer until another day any calculations as to the demand abroad for American breadstuffs, and as to the home value of flour for some months to come. The European demand will be in some measure contingent upon the duration of the war.

We see nothing now to dampen the hopes of the product of this year in the United States, and we have abundant grounds for congratulation, North, East, South, and West.

For previous statements and annual reports, see September No., 1854, pp. 215-217. August, 1853, pp. 110-112. September, 1852, pp. 246-248. September, 1851, p. 238.

The annual meeting of the stockholders of the Bank of Charleston, South-Carolina, was held, pursuant to public notice, on Monday, 9th July, 1855. A. G. Rose, Esq., the President of the Bank, submitted the annual report, from which we extract as follows:

|           | It will be seen, on referring to the profit and loss account, that the net profits of the business for the year, after deducting the |
|-----------|--|
| \$265,182 | current expenses, amount to  |
|           | From which sum, two semi-annual dividends of 4 per cent each   |
| 252,864   | have been declared, amounting to   |
|           | Togging a cumulus mulich has been comied to the emulit of the con-   |
| \$12,268  | Leaving a surplus, which has been carried to the credit of the con-  |
| \$12,268  | tingent fund account of  |

The report of the standing committee on the suspended debt will be found to contain a full review of the state of that account. As anticipated in the report of last year, many of the then existing debts have been settled in full, and the payments amount to \$87,898.43. The large claim against the Philadelphia house then reported, is, we are pleased to state, now in course of liquidation, and payments

thereon have been made, amounting to \$43,735.85. Assurances are given that the assets of the estate will be realized without further delay, and the proceeds promptly disbursed; but it still remains very uncertain to what extent these assets will be able to meet the liabilities.

In the present report it will be found that a large augmentation of the then existing debt is embraced in the transactions of the past season. This is to be regretted; but when it is considered what an adverse year has just been passed through, a different result could scarcely have been expected. The numerous failures and suspensions that have taken place, greatly interrupted the regular course of business, and have occasioned much delay and disappointment in obtaining satisfactory settlements. We have no reason, however, to apprehend that any material loss will eventually be sustained, as the claims for the most part are amply secured, either by mortgage, collaterals, personal indorsements, or preferred by assignment, and some of which are in process of liquidation.

The present number of stockholders amounts to 1018, and represents the following interests, namely:

| Held by individuals in their own name,           | \$1,910,000 |
|--|-------------|
| " by widows, guardians, executors, and trustees, | 262,500     |
| " by banks and incorporated bodies,              | 988,300     |
| Amount of capital,                               |             |

It will be observed from the statements furnished, that the business of the Bank has not been as extended or as profitable as usual, and consequently the dividends for the year have been proportionately less. This has resulted from various causes, among which may be particularized, the great injury which the trade of our city sustained from the epidemic of the last summer, superadded to the general derangement of commercial affairs throughout the country. unsettled condition of things compelled the Board to adopt a policy suited to the existing pressure of circumstances, rather than the desire or prospect of gain. Accordingly, it was found necessary, in order to provide against possible contingencies, that the credit of the institution abroad should be used as little as possible, by restricting the issue of its notes; and that its resources should be employed exclusively at home, in affording facilities to our business community, which stood in need of more than ordinary assistance, during a crisis of extreme pressure.

To accomplish this, demanded the sacrifice of other important interests. The agencies abroad, which have hitherto proved a valuable source of revenue, had to remain inactive, and to suffer the business of their customers to pass into other hands. The business at home had so to be regulated as to make suitable provision for the redemption of our returning currency, and to accommodate the urgent demands of the community. And the exchanges had so to be equalized as to check the exportation of specie, and furnish a cheaper medium of remittance to the North. For some time sight funds on the North had, in consequence, to be put down to par, at which rate

176

this Bank supplied demands upon it for checks to the amount of \$870,000.

Subsequently, the rate was advanced to a quarter of one per cent

premium, and so continues; and, at this rate, we have furnished the

additional sum of \$3,783,000.

At no other point, either south or west of Charleston, has sight exchange on the North ruled so uniformly low during the season. The tendency has been to concentrate here a very heavy and constant demand for checks, and to divert from dearer markets a large proportion of the floating currency seeking such investment; all which has contributed to afford increased facilities to the business of the city, and prevented the accumulation of idle funds at the North.

These incidental results have, doubtless, exercised a beneficial influence on the interests of our community; but, on the other hand, the necessity and expense of providing at all times a sufficiency of sight funds to supply this extraordinary demand, has generally left but a small margin of profit, between the buying and the selling rate, and consequently the usual income of the Bank, derived from this

source, has been proportionably diminished.

The very great and general contraction of the paper currency throughout the country has likewise operated to our disadvantage, in sending home a large proportion of our distant circulation. On referring to the reports of the two preceding years, it appears, that at similar periods of the year,

| We had in circulation, in 1853,         | .\$2,111,000 |
|---|--------------|
| And in 1854                             |              |
| By the present report, we have now only |              |
|   |              |

This summary exposition of the operations of the Bank will account for the curtailment of the business and earnings of the year; but, as regards the latter, it will be perceived, that the views of the Board have been mainly directed to the accomplishment of other and more important results, namely: to placing the strength and security of the institution beyond the power of external influences, and making its available resources more directly applicable to the immediate and pressing wants of the community; thus mitigating the intensity of the prevailing pressure, and sustaining commercial credit in a period of general embarrassment.

Considerable inconvenience has hitherto been experienced, both by the officers and customers of the Bank, from the limited accommodation which our banking-room affords for the transaction of business. The subject has frequently been under consideration, but no desirable plan could be devised to remedy the evil. At length, a favorable opportunity having been presented, by the offer, at public sale, of the adjoining premises, it was accordingly embraced, and the property has been purchased. It is therefore contemplated, at some suitable and convenient season, to cause such additions and improvements to be made to the banking-house, as may be found necessary to attain the desired object.

## LEGAL MISCELLANY.

- I. NEW-YORK SUPREME COURT. II. SUPREME JUDICIAL COURT OF Massachusetts. III. Supreme Court of Pennsylvania. IV. COURT OF APPEALS OF MARYLAND.
- I. New-York—Banks and Banking—Bills of Exchange and Promissory Notes—Corporations—Railroads.

## I. BANKS AND BANKING.

- 1. M. being indebted to the Rochester City Bank, by arrangement with the Bank, and for the purpose of procuring the means of payment, assigned to the American Life Insurance & Trust Company the first six installments upon a bond and mortgage held by him; the Bank guaranteeing to the Trust Company, by an instrument under its corporate seal and the hand of its cashier, the final collection of the installments. M. then received the money from the Trust Company, and applied it to the payment of his debt to the Bank. Held, that the guarantee was valid, and binding upon the Bank. (Talman v. The Rochester City Bank, 123.)
- 2. A bank may assign or convey any property held by it, and may enter into the common covenants of guarantee or warranty, on making such assignment or conveyance. (*Ibid.*)
- 3. So, when it is agreed that the proceeds of a bond and mortgage shall belong to a bank, the securities are so far the property of the bank that the case is substantially within the rule, and the bank has the capacity to guarantee the payment thereof, to a party advancing money upon them; although such securities have not been assigned to the bank. (Ibid.)
- 4. Free banks have authority to buy, at a discount, bonds, notes, or any evidence of the public debt of a State. (Tracy v. Talmage, **45**6.)
- 5. They are not prohibited from giving their engagements on time, provided such engagements were not adapted, nor intended to circulate, as money. (*Ibid.*)

6. They are not bodies corporate, within the meaning of the constitution, or the general banking law. (Ibid.)

7. Nor are they subject to penal regulations involving forfeiture or imprisonment, enacted in reference to corporations proper. (*Ibid.*)

## II. BILLS OF EXCHANGE AND PROMISSORY NOTES.

1. A notice of protest, which gives the names of the makers and indorser, and the amount of a promissory note, is a sufficient description of the note; in the absence of proof that there were other notes in existence to which the notice would apply. (Young v. Lee, 18 Barbour, 187.)

2. Where a notice of protest states that a note has been protested for non-payment, and that the holders look to the indorser for payment thereof, this is sufficient, although it does not allege a demand and refusal of payment. (Ibid.)

3. The mere discharge of an antecedent debt is a valuable consideration, within the meaning of the rule which protects and confirms the title of the holder, for value, of negotiable paper, when the transaction is made in the usual course of business, before the paper has

arrived at maturity. (Ibid.)

A note for \$1000 was made by B. and G., and indorsed by L. for their accommodation, upon an understanding that the same should be discounted, and the proceeds applied to the payment of a previous note for \$1000, made by B. and G. and indorsed by L., and then outstanding and about to become due. B. and G. being indebted to the plaintiffs upon a promissory note for \$943.31, given by them for goods purchased, transferred to them the \$1000 note so indorsed by L., in payment of their indebtedness upon the said note, to the plaintiffs, and the note of \$943.31 was given up and cancelled. Held, that the plaintiffs were bona-fide holders of the \$1000 note; the original debt having been prima facie discharged, by the taking of the negotiable note of the debtors by the plaintiffs, and by the surrendering of the note for \$943.31 to be cancelled, upon the faith of the \$1000 note received in exchange; and that they were entitled to recover from the indorser as well as the makers, the amount they paid for it, with interest and no more. (Ibid.)

5. Where a bill of exchange was drawn upon a firm in the city of New-York, and directed to them by the name of W. C. & Co., 263 Wash. street, New-York, and the certificate of the notary stated that he presented the bill for payment to "one of the firm of W. C. & Co., the acceptors, and demanded payment, which was refused;" Held that the certificate was defective, 1st, in not stating who composed the firm, nor the name of the person of whom the demand was made; and 2d, in not stating the place where the demand was made.

(The Otsego County Bank v. Warren, 290.)

6. The general rule is, that where a bill is accepted by partners, the presentment for payment should be at their place of business, or at the dwelling-house of either of them. (*Ibid.*)

7. And if a draft is addressed to the acceptors at a particular number and street in the city of New-York, that will be presumed to be

their place of business. (Ibid.)

8. The provision of the statute making the memorandum of a deceased notary, in his register, evidence of the fact that a notice of non-acceptance or non-payment was sent, does not extend to an entry or statement of the *presentment* and *demand* of a note or bill. The fact of presentment and demand must be proved in some other manner than by the memorandum of the notary, made in his register. (Ibid.)

(Ibid.)
9. The statute making the certificate of a deceased notary, of the making of a demand of acceptance or of payment, presumptive proof of such demand applies only to such demand as is stated therein; and

if the certificate specifies a demand which is not sufficient in law, it will not avail the holder as evidence. (Ibid.)

10. A custom usually prevailing among a class of men who have a special legal function to perform, cannot be allowed to control the rules of law in respect to commercial paper; nor make that valid which the law declares not to be valid. (Ibid.)

11. Accordingly held, that evidence that notaries in the city of New-York usually state, in their registers, a demand of acceptance or of payment, when made upon a firm, to have been made upon one of the firm, without specifying which, was inadmissible. (Ibid.)

- 12. Where there has been no due presentment of a bill, or notice of dishonor, if the indorser, after the maturity of the bill, even supposing himself liable to pay the same, takes security from the maker, this will not amount to a waiver of the objection of want of due presentment, or notice; but the indorser will be deemed to have taken the security merely contingently, in case of his ultimate liability.
- 13. Where a note, negotiable by delivery merely, is transferred by the payee, and a guarantee of payment indorsed thereon, expressed as being for value received, the possession of the note by the holder is prima-facie evidence that he owns it; notwithstanding it appears by the date of the guarantee that he did not receive the note until after it became due. (Smith v. Schanck, 344.)

14. Declarations, made by the payee of a negotiable promissory note, while he was the owner, are not admissible against a subsequent

holder of the note for value. (Ibid.)

15. But any agreement between the payee and the maker, or proposition or message from the former to the latter, upon which the maker has acted, thereby constituting an agreement entitling him to claim a deduction from the note by way of payment or set-off, prior to the transfer of the note, may be proved. (Ibid.)

### III. CORPORATIONS.

- 1. Where a corporation, at the time of executing a mortgage, had not adopted any corporate seal, by resolution, and had no seal, but the trustees adopted the seal affixed opposite the name of the president, as the seal of the corporation, for the time being; Held that this was sufficient. (South Baptist Society of Albany v. Clapp, Ibid., 35.)
- 2. A corporation acts and speaks by its officers; and what they say, when in discharge of their duty as officers, and in relation to that duty, is evidence against the corporation. (First Baptist Church of Brooklyn v. The Brooklyn Fire Insurance Company, 69.)

3. A stockholder of a manufacturing corporation is not liable, under the act of February 17, 1848, for debts of the corporation, contracted

before he became a stockholder. (Tracy v. Yates, 152.)

4. A person who gives to a corporation his promissory note, payable at a future time, for a specified number of shares of its capital stock, and takes a receipt from an officer of the company expressing that such note, when paid, will be in full for such shares, does not

become a stockholder, until the note matures and is paid, and a stock certificate is issued. (Ibid.)

## IV. RAILROADS.

1. Where the owner of land conveyed a strip thereof to a railroad company for its track, the value of which did not exceed \$60, and received therefor \$1600; Held, that it might fairly be presumed that in making such conveyance the grantor must have contemplated the risk of injury to his remaining lands by fire, from engines running on the road. (Road v. The New-York & Erie Railroad Company, 18 Barbour, 80.)

2. Hence the railroad corporation, while in the exercise of its appropriate business, is only responsible to the grantor of the land for ordinary care and diligence, in the manner of using its road.

(*Ibid.*)

3. And if, while the railroad company is in the lawful pursuit of its legitimate business, a fire is communicated to the grantor's remaining lands, by a spark from the engine, by which he sustains damage, it is damnum absque injuria, and the company will not be mulcted in damages, unless upon proof of negligence. (Ibid.)

4. An authority to use a steam-engine, for the purpose of propelling cars upon a railroad, is an authority to emit sparks therefrom; and if the most approved means which science and skill have invented are applied to prevent sparks from causing injuries, the railroad company is not liable in case damage is occasioned by fire, communicated in

that manner. (Ibid.)

- 5. Where the plaintiff's woods were set on fire, and injured, by sparks from an engine upon the defendants' railroad, and it appeared that the defendants had placed the most approved spark-arresters upon their engines, to prevent, as far as possible, the emission of sparks; that the engines were as well secured and arranged, to guard against the communicating of fires, as were the engines on any railroad in use; that they had provided a sufficient police for the road, and adopted all needful and prudent rules for their guidance; and that the company was not guilty of any negligence; it was held that the defendants were not liable. (Ibid.)
- 6. Where the owner of land in a city or village dedicates it to the public, for the purpose of a street, and the dedication is accepted by the proper authority, although the legal presumption is that the fee of the land is in such owner, yet the easement is wholly granted to the public. And if a railroad company, by virtue of its charter, and under a license for that purpose, given by the proper municipal authority, constructs a railway upon such street, the property of the original owner of the street is not thereby taken, within the intent and meaning of the provision of the constitution, requiring compensation to be made to the owner of private property taken for public purposes. (Williams v. The New-York Central Railroad Company, 222.)
  - 7. Such occupation of the street, for the purposes of a railroad, is

therefore legal, although no provision has been made for compensation to the original owner of the land dedicated. (Ibid.)

- 8. The use of a street by a railroad is one of the modes of enjoying a public easement; and the only restriction upon its application is that the use to be made of streets must not be utterly incompatible with, or subversive of, the ends for which they were established. (Ibid.)
- 9. A railroad, in the streets of a city or village, is not per se a nuisance; and, although individuals residing on the streets thus used may be subjected to some inconvenience from the noise, and smoke, and frequency of passing trains, yet it must be a very special and peculiar case in which real estate can be injured by mere noise, or the usual concomitants attending the passage of a railroad train. Per Bacon, J. (Ibid.)
- 10. An assumption, in the inquisition of appraisers of damages on account of land taken for a railroad, "that the railroad company will construct across said railroad a suitable and convenient crossing place or places, for the convenient occupation of the adjacent premises," etc., does not impose any obligation upon the company to construct such crossing; it seems. (Ibid.)
- 11. Payment of the calls made upon the capital stock of a railroad company may be enforced, by an action upon the undertaking of the stockholder, notwithstanding the statute authorizes a forfeiture of the stock in case of non-payment. (The Troy & Boston Railroad Company v. Tibbits, 297.)
- 12. The obligation of actual payment is created by a subscription to a capital stock, unless plainly excluded by the terms of the subscription. (Ibid.)
- 13. An individual does not become a member and stockholder of a railroad company under the general railroad act of 1848, by the act of subscribing a preliminary paper, previous to the organization of the company, by which he agrees to take the amount in capital stock placed against his name; without subsequently affixing his signature to the articles of association, or subscribing to the capital stock, in the books directed by statute to be opened after the corporation is formed. (*Ibid.*)
- 14. Nor can a recovery be had upon his subscription to such preliminary paper, for calls made upon the capital stock of the company. (*Ibid*.)
- 15. The only modes prescribed by the statute for becoming a corporator and stockholder in a railroad company are, originally subscribing the articles of association, or, after the company is incorporated by the filling of the articles, by subscribing to the capital stock in the books opened by commissioners. (Ibid.)
- 16. It is only the stockholder, created in one or the other of these modes, from whom the directors of a company formed under the act of 1848, are authorized to require payment. (Ibid.)
- 17. An informal subscription, or promise to take stock, prior to the signing of the articles of association, has no legal vitality, standing

alone. It is a mere provisional act, inoperative unless pursued through the remaining forms of the statute. (Ibid.)

18. Of itself it secures no right of membership, present or future, to the subscriber; and, it is not essential to a regular organization of the company, and imposes no legal obligation upon the company to issue stock to the amount named therein, or upon the subscriber to pay for it. (*Rid.*)

19. The general railroad law of 1848 confers no power to make conditional subscriptions; and such a subscription is contrary to pub-

lie policy. (Ibid.)

20. A condition, annexed to a subscription, which provides for a dividend by way of interest, to each paying subscriber, until the full completion of the road, is illegal and void, as contravening public policy. (*Ibid.*)

21. So of a condition imposing an unauthorized limitation upon the power to call in stock, conferred on the directors by the statute.

(1bid.)

- 22. An individual does not become a stockholder of a railroad company, so as to be liable to be sued by the company for calls made upon its capital stock, merely by subscribing a preliminary paper, previous to the organization of the company, by which he agrees to take a specified amount of the capital stock; unless he subsequently signs the articles of association, or subscribes to the capital stock, in the books of the company. (The Troy & Boston Railroad Company v. Warren, 310.)
- 23. A subscription to such preliminary paper by one of several heirs, as follows: "Estate of N. W., 100 shares, \$10,000," is not binding either upon himself or his co-heirs. (*Ibid.*)

24. The statute prescribes a particular mode of subscription, namely, that the associates shall severally subscribe the articles, etc.;

and that method must be followed. (Ibid.)

- 25. The sections of the general railroad act, providing that the corporations subject to that act shall erect and maintain fences on the sides of their road, and "farm crossings for the use of the proprietors of land adjoining such railroad," make no distinction, in terms, in respect to this duty to make crossings, between cases in which the lands of the corporation, occupied by the road, were obtained by agreement with, and conveyance from, the owners, and those in which title was acquired by the compulsory proceedings authorized by the act; and none was intended by the Legislature. (Clarke v. The Rochester, Lockport & Niagara Falls Railroad Company, 350.)
- 26. Neither is the provision for making crossings, in terms, limited to cases where the adjoining proprietors have farms, or any particular quantity of land, to be benefited by the crossings; and if there is any limitation, in cases within the language employed, to be imposed by construction, it is merely that the crossings must be useful. (*Ibid.*)
- 27. Where the plaintiff conveyed to the defendants a strip of land six rods wide, running through his village-lot, for the track of their railroad, without reserving the right of crossing the same, and they constructed an embankment on said strip of land, fifteen feet high,

which rendered access to a portion of said lot, and the passage from one parcel to the other, difficult and inconvenient, but it appeared that the unsold portion of the lot was of small value, and that the expense of making a crossing would much exceed the value thereof to the plaintiff; and there were no special circumstances shown, in regard to the manner of using the land, rendering a crossing necessary; Held, that this was not a case in which the court ought to adjudge a specific performance, by the defendants, of the duty imposed upon them by the statute, to construct a crossing; but that the plaintiff should be left to his remedy for damages. Johnson, J., dissented. (Ibid.)

28. The provision of the statute, (Laws of 1850, ch. 140, § 44,) requiring railroad companies to erect and maintain, at farm-crossings, bars or gates, to prevent cattle, etc., from getting upon the railroad, is for the benefit and protection of the land-owner; and if he refuses to have bars or gates erected, or desires the corporation not to put them up, or undertakes with the corporation to erect them himself, the omission of the company to perform the duty imposed by the statute, is not wrongful, under the circumstances, and cannot be made the foundation of an action by the land-owner, or one claiming under him. (Tombs v. The Rochester & Syracuse Railroad Company, 583.)

29. A party may always waive a right in his favor, created by statute; and when the owner of land crossed by a railroad, himself undertakes to do what the statute obliges the corporation to perform, and does it in a manner to suit his own convenience, at the expense of the corporation, he is bound to accept his own performance as a satisfaction to himself and those occupying under him, of the obliga-

tions of the corporation. (*Ibid.*)

30. It was agreed between W., a land-owner, and a railroad company, that the latter should fix the crossings to a lane, and that the former should occupy the lane as he had ever done before, namely, as an open lane. Subsequently the corporation requested W. to go on and fix the crossing at the lane, as he wished to have it; and he did so, but without erecting gates or bars, and the corporation paid him for it. A cow, belonging to a tenant of W., having strayed upon the railroad track from the lane where she was allowed to run, was killed by the engine of the company. Held, that the corporation was not liable. (Ibid.)

### Massachusetts.

### I. Bills of Exchange and Promissory Notes.

1. A bill of exchange drawn by the master of a vessel on her owners, for supplies furnished in a foreign port, if not accepted or paid, but protested for non-acceptance and for non-payment, and brought into court and filed, is no bar to an action against the owners for the supplies so furnished. (Zerano v. Wilson, 8 Cushing's Mass. Reports, 424.)

- 2. One who indorses his name in blank on a promissory note several weeks after it is given, is not liable as an original promisor. (Mecorney v. Stanley, 8 Cushing, 85.)
- 3. Mere forbearance to sue the maker of a note, without any agreement to that effect on the part of the holder, is not a sufficient consideration for a guarantee of the note. (Ibid.)
- 4. Where a guarantee is made on a promissory note before it is delivered by the maker to the payee, no proof of a distinct consideration is necessary in order to charge the guarantor; and in an action against the latter, when the guarantee is without date, and there is no distinct proof of the time when it was made, it may be left to the jury to find that it was simultaneous with the note itself. (Bickford v. Gibbs, Ibid., 154.)
- 5. The guaranter of a promissory note, who in his guarantee expressly waives demand and notice, is liable to an action thereon without previous demand or notice. (*Ibid.*)
- 6. One who indorses a promissory note, inserting over the signature a waiver of demand and notice, is not entitled to any demand and notice on the non-payment thereof by the maker. (Woodman v. Thurston, Ibid., 154.)
- 7. The maker of a promissory note, as an inducement to the indorser thereof to extend the time of his liability thereon, obtained the note of a third person, and delivered it to the indorser as security for the payment of the first note, and the indorser indorsed the second note to the holder of the first, who agreed to such extension of time. When the second note fell due, the maker thereof refused to pay it until the first note was delivered to him, which was done, and he then paid his note. It was held that such payment discharged the indorser from liability on the first note. (Ibid.)
- 8. Where the indorser of a promissory note resides in a town in which there are two post-offices, a notice of the dishonor of the note, addressed to him at the town generally, is sufficient prima facia; though liable to be rebutted by proof that he was accustomed to receive his letters at one of the offices only, and that the holder of the note might have ascertained that fact by reasonable inquiry (Morton v. Westcott, Ibid., 425.)
- 9. One who had sold goods and taken a promissory note for the price, took the benefit of the insolvent laws; his assignee retook the goods from the purchaser, and disposed of them; and the insolvent afterwards indorsed the note to one who had full knowledge of these facts. In an action on the note, brought by the indorsee against the maker, it was held that if the assignee took the goods, by virtue of any stipulation on the original sale, of any fraud in the sale, or, with the consent of the purchasers for the purpose of rescinding the sale, the defendant was not liable; but that if the assignees took the goods wrongfully, without the assent of the purchaser, and there was in fact no recision of the sale, the defendant was liable; and that the burden of proof was on the defendant, to show that the goods had been so re-taken or re-transferred, as to discharge him from liability on the note. (Spaulding v. Hood, 602.)

## II. RAILROADS.

1. The Lancaster and Sterling Branch Railroad Company were authorized by their charter to locate their road, commencing at a certain point, "thence running through Acton, Sudbury, Stow, Marlborough," etc. It was held that they were not obliged by this act to locate their road through these towns in the order named; but that a location from Acton through Stow to Sudbury, and thence through Stow again to Marlborough, was valid. It was held, also, that the petitions to the Legislature, on which the act was granted, were inadmissible in evidence to affect the construction of the act in this particular. (Commonwealth v. Fitchburgh Railroad Co., 8 Cushing, 240.)

2. In estimating the damages occasioned by taking land for a railroad, any direct and peculiar benefit or increase of value occasioned to land of the same owner adjoining or connected with the land taken, is to be allowed by way of set-off; but not any general benefit or increase of value, received by such land in common with other lands in the neighborhood. And when the sheriff instructed the jury, that if the owner of the land, which by reason of the benefits derived from the railroad was as valuable as before, was entitled to no damages, the verdict was set aside. (Upton v. South-Reading Branch Railroad Co., Ibid., 600.)

3. Where the charter of a railroad corporation provides that the capital stock shall consist of not more than a certain number of shares, "the number of which shall be determined from time to time by the directors thereof," the directors have no power to lay assessments upon subscribers for stock, before determining the whole number of shares. (Worcester & Nashua Railroad Co. v. Hinds, 110.)

4. The flats lying between the channels of Charles and Miller's rivers, outside of the location of the road of the Boston and Maine Railroad Extension Company, and filled up by the said company, pursuant to the authority given by St. 1845, c. 224, \$1, for the location of engine-houses, and wood-houses, and other purposes for the use of their road; and used, when so filled up, exclusively for such purposes, are not exempt from taxation. (Boston and Maine Railroad Co. v. City of Cambridge, Ibid., 237.)

## III. MARINE AND FIRE INSURANCE.

1. Underwriters insuring a vessel against perils of the sea, are bound to pay the assured the amount paid by him to the owners of another vessel for damages suffered in a collision with the vessel insured, occasioned by the negligence of the master and crew of the latter. (Nelson v. Suffolk Insurance Company, 8 Cushing's Mass. Reports, 477.)

2. The owner of real estate mortgaged obtained insurance thereon, payable to the mortgagee in case of loss, from a mutual fire insurance company, whose by-laws provided that no mortgaged estate should be deemed to be alienated, so as to avoid the policy, until the mortgage should be foreclosed, and that any policy payable to a mortgagee in

case of loss should continue payable, notwithstanding any subsequent alienation of the estate. A third person afterwards purchased the equity of redemption, and also obtained an assignment of the mortgage and of the policy. It was held that the mortgage was thereby merged in the fee, and that no action could be maintained on the policy for a loss subsequently occurring. (Macomber v. Cambridge Mutual Fire Insurance Company, Ibid., 133.)

- 3. An applicant for insurance, in his application to a mutual fire insurance company, in answer to a question from the company, whether the premises were encumbered, by what, and to what amount, stated that they were mortgaged to L., for \$2000. The applicant had in fact no legal title to the premises but only a bond from L. to convey the same to him, on his giving a mortgage for \$2000 advanced to him by L. to build with, and for the additional sum of \$1800, the price of the land: and, the company issued a policy to the applicant "on his dwelling-house," made in express terms subject to the lien established by law on the interest of the assured in the buildings covered by the policy and the land under the same, and "payable in case of loss to L., mortgagee." It was held, that the misrepresentation in the application avoided the policy, although the application was drawn up by an agent and director of the insurance company. (Lowell v. Middlesex Mutual Fire Insurance Company, Ibid., 127.)
- 4. The drawing of a lottery, with the consent and participation of the assured, in a building insured against loss by fire as "a shoe manufactory," does not avoid the policy on the building, nor on the stock therein. (Boardman v. Merrimack Mutual Fire Insurance Company, Ibib., 583.)
- 5. A policy of insurance on a "machine-shop, a watchman kept on the premises," does not require a watchman to be kept there constantly, but only at such times as men of ordinary care and skill, in like business, keep a watchman on their premises; and in an action on such a policy evidence of the usage, in this respect, of similar establishments, is admissible. (Crocker v. People's Mutual Fire Insurance Company, Ibid., 79.)
- 6. In a policy of insurance on a paper-mill, fixtures, and machinery, these words, "on condition that the applicant take all risk from cotton waste," inserted between the statement of the sum insured on the property, and the statement of the place where the property is situated, do not constitute a condition or an exception, and in case of loss the burden of proof is on the insurers to show that it was occasioned by cotton waste. (Kingsley v. New-England Mutual Fire Insurance Company, Ibid., 393.)
- 7. A mutual fire insurance company in a policy issued by them, promised "according to the provisions of the act incorporating" them, to pay the assured a certain sum within three months after the destruction of the premises by fire, "and due notice thereof as aforesaid." There was no previous mention of notice in the policy; but the act referred to, a printed copy of which was annexed to the policy, contained a provision that notice of any loss should be given in writing at the office of the company within thirty days after the loss. And one of the by-laws of the company, which were also printed on the

policy, required any person insured, and sustaining loss or damage by fire, "forthwith to give notice thereof, as required by the act of incorporation, and also as soon as practicable, to furnish the office with a particular account of such loss or damage," in a specified form. It was held that the assured under this policy, on giving to the company reasonable notice of a loss, was entitled to recover, although he did not comply with the requirements of the act and by-laws. (Ibid.)

- 8. Where a policy of insurance against loss of a woollen factory by fire, provides that it shall be void if the representations made in the application for insurance do not contain a just, full, and true exposition of all the facts and circumstances in regard to the condition, situation, value, and risk of the property insured, so far as the same are known to the applicants, and are material to the risk; and annexed to the application are various questions by the insurers, and a notice that it is expected that the answers thereto will meet the requirements of the insurers' office; one of which requirements is, that a cask of water, and buckets, will be kept in each story; and one of the written answers states that a cask of water, and buckets, are kept in each story; the burden of proof is on the insurers in an action brought against them on the policy, to show that this answer is not true. (Jones Manufacturing Company v. Manufacturers' Mutual Fire Insurance Company, Ibid., 82.)
- 9. A policy of insurance against loss of woollen factory by fire, provided that if the situation or circumstances affecting the risk thereupon, should be so altered or changed by the assured without the consent of the assurers as to increase the risk, the policy should be void; the position of the stove in the lower story, and of its smoke-pipe, was afterwards changed without the assent of the insurers, so that the smoke-pipe instead of passing into the chimney in that story was carried up through the floors of the second and third stories, and after passing around the third story about two feet from the floor, for the purpose of drying wood, was made to enter the chimney in that story; in an action on the policy, the defendants requested the judge to instruct the jury, that if the change of the stove-pipe and the use of it in the third story materially increased the risk of fire in that story, the policy would be void. But the judge without giving the particular instruction requested, instructed the jury generally, that if the alteration of the stove and smoke-pipe increased the risk, the policy was void. It was held that the defendants had no ground of exception to this instruction. (Ibid.)

## Pennsylvania.

### I. BANK OF THE UNITED STATES—ASSIGNMENT BY IT.

1. On the 7th June, 1841, the Bank of the United States made a second assignment of assets, exceeding twelve million of dollars, to pay depositors and holders of notes of the former and of the bank

then existing; "being notes of the ordinary kind, payable on demand, and commonly used in circulation;" and also "to sundry persons holders of notes of the said bank, commonly called post-notes, (other than post-notes held by or issued to certain banks in the city and county of Philadelphia, for which security was provided and given by an indenture, bearing date the first day of May in the present year, and which are not intended to be provided for and embraced in the present indenture.)" And further providing that the bank had "resolved and agreed to provide an adequate security for the payment of the said deposits, and of the said notes, and of the said post-notes," (except as aforesaid,) "and of interest to accrue upon them," etc.

It was held, that the post-notes meant in the said agreement, and designed to be secured by it, were such notes payable at a future day as were designed as a part of the circulating medium; and that the assignment did not include notes or obligations of the bank under seal, payable at a future day in London, each being for one thousand pounds sterling, with interest, which were issued for a loan of money to the said bank, and which were not designed to be a part of the circulation of the bank. (Hogg's Appeal, 22 Penn. State Reports, 479.)

2. If the terms "post-notes, as commonly called," were so new that the courts were not presumed to understand their meaning, or to be able to learn it from books, it was proper for the auditors, before whom the question arose, to resort to the testimony of witnesses to ascertain their meaning. (*Ibid*, 480.)

3. In the proviso to the 6th section of the act of 5th May, 1841, providing for an assignment by the Bank of the United States, it is enacted, that the trustees shall receive in payment of debts at par, the notes or other evidences of debt issued or created by said bank. Held that by the terms, at par, was meant the amount due upon post-notes including interest; and that on a settlement with the trustees for the principal of the notes, the interest upon them might be reserved by the owner and submitted as a claim at a future time. (Ibid.)

### II. PROMISSORY NOTES.

1. A partner cannot render the firm liable for a note for his individual debt, by including within it a debt of the firm forming a small part of it. The assent of one other of the partners to the giving of the note, could not render the third partner liable. (King v. Faber, 22 Penn. State Reports, 21.)

2. The payees of a note in question, were not innocent holders of negotiable paper without notice of the consideration, but were aware that their claim was against other parties; under these circumstances, it was their duty to see that the note in suit was signed with the assent of all of the partners. (King v. Faber, Ibid., 21.)

3. A note, not negotiable, was indorsed by the payee in blank, and under an agreement that the indorsement should impose no liability on the indorser; it was afterward received by the holder, who, though without notice of the agreement, did not prove that he was a holder

for value. Held, that he took the same, subject to the equities between the payee and his immediate indorsee. (*Bricleback* v. *Wilkins*, Ibid., 26.)

4. The mere possession of a note not negotiable, implies no consideration for its transfer, and gives the holder no right of an action

on it in his own name. (Ibid.)

5. A note payable to the order of the maker is a negotiable note.

(Miller v. Weeks, Ibid., 89.)

- 6. In a suit on such a note against the person who was both drawer and indorser, it was averred in the narr. that the defendant made the note, and indorsed and delivered it to the firm which subsequently indorsed it, and that they indorsed and delivered it to the plaintiff. Held, that the title of the plaintiff was set out therein with sufficient fullness and formality. (Ibid.)
- 7. A rule of court having prescribed that in action upon notes, a copy of which shall have been filed within two weeks from the return day, it shall not be necessary to prove the execution thereof, unless the defendant by affidavit, shall have denied that it was executed by him. Held, that the copy of the note having been filed, and its execution not denied by affidavits, proof of its execution by the maker, or of its indorsement by him, was not necessary. (Ibid.)

8. In an action on a promissory note, the plaintiff's attorney is privileged from being called upon to prove that the note in suit belongs to other persons than the plaintiff, and that the plaintiff is but a

trustee with respect to it. (Ibid.)

- 9. When there is a matter on the record by which to amend the amount laid in, the declaration may be amended in this court by enlarging its amount. Therefore, when a judgment in an action of assumpsit on a promissory note was pending in this court on writ of error, the declaration was allowed to be amended here by increasing the damages to the amount of the verdict, so as to include the interest which had accrued on the note after suit brought, a copy of the note being filed at or soon after the institution of the suit. (Ibid.)
- 10. The mere possession of a note on its face negotiable, having on it an indorsement in blank, which is offered as a set-off, is not evidence that it belonged to the defendant at the commencement of the suit. It is incumbent on the defendant to show that the claim attempted to be set off was acquired in proper time, namely, before the commencement of the suit. (Smith & Co. v. Ever & Pike, Ibid., 116.)
- 11. A partial payment on a promissory note, by one of two joint debtors, not partners at the time, will not avoid the bar of the Statute of Limitations as respects the other party. (The case of Zent's Executors v. Heart & Eyster, 8 Barr, 337, overruled. Coleman v. Forbes, Ibid., 156.)
- 12. The statute of 3 and 4 Anne, ch. 9, distinguishes between the indorsement and assignment of a negotiable note, and authorizes the holder by either mode of transfer, to bring suit in his own name against the maker or indorser. No action is given by it against the assignor. (Lyons v. Divelis, Ibid., 185.)
  - 13. An assignment of a promissory note transfers to the holder

the rights of the assignor; the assignor being responsible for nothing more than the genuineness of the claim. (Ibid.)

14. On an indorsement on an overdue negotiable note, to the effect, "I assign the above note to J. D.," there is no resort for indemnity against the insolvency of the maker. (Lyons v. Divelis, Ibid., 185.)

15. Though the words "without recourse" in connection with such an assignment were stricken out, the holder being unwilling to take the note otherwise, the assignor saying "he did not know it would make any difference." Held, that the erasure, under such circumstances, did not amount to a contract of guarantee. (Ibid.)

16. When the assignment of the overdue note was made, it was agreed that the assignee was to take *iron* from the drawer to the amount of the note, and to go after the iron the next day, and if it were not received, the note was to be returned to the assignor immediately. It was held, that as the assignee did not conform to the terms of the agreement, he was not entitled to recover from the assignor. (*Ibid.*)

17. The transfer of the said note by the assignee three days after he received it; the commencement of a suit by the then holder against the drawers, about three months afterwards; the recovery of judgment and execution returned, "no property found," did not amount to

a compliance with the said agreement. (Ibid.)

18. In an action of assumpsit on book account, in addition to the pleas of non-assumpsit and payment with leave and set-off, it was pleaded specially, that the defendant had delivered to the plaintiffs three promissory notes of third persons, payable to the defendant or his order; that the defendant indorsed the said notes and delivered them to the plaintiffs, who accepted and received them for the amount of the said notes. The notes were payable in iron metal. There was no proof that the plaintiffs had agreed to accept the notes in payment or to assume a duty of collecting them, it being alleged by the plaintiffs that they were not left even as collateral security, but merely for the convenience of the defendant, that the metal in which they were payable might be received by them and accounted for by credit on the book account; the makers of the notes failed, the notes being unpaid.

It was held, that it was error in the court to charge the jury that "under the facts in evidence, 'assuming their truth,' the opinion of the court was, that the amount of the notes ought to be credited, and that the 'verdiet should be rendered accordingly.'" The nature of the transaction was a question of fact, and should have been sub-

mitted to the jury. (Sellers & Nicols v. Jones, Ibid., 423.)

19. If the notes were received as collateral security or for the purpose of collection, the holders were bound to use ordinary diligence in their collection, and if the notes were lost for want of such attention they would be liable to the owner to the extent of the injury; but if they were left with the holders merely that they might receive the metal, in which they were payable when it was delivered, they would be liable to account only for the amount received by them. (*Ibid.*)

20. When it clearly appears from the face of a promissory note,

that it has been altered in a material part, such as its date, it is incumbent on the party producing it, to account for the alteration; and if no evidence explaining the alteration is given, it will be error to submit to the jury to determine whether the alteration preceded delivery or otherwise. The onus of proof as to the alteration is upon the party alleging that it was made lawfully. (Clark v. Eckstein, Ibid., 507.)

21. But if it be doubtful whether the note has been altered, the preliminary question as to whether it has been altered, is for the jury to determine. (*Ibid.*)

# III. RAILROADS.

1. Though, by the 4th section of the act of 27th March, 1848, viewers appointed to inquire as to damage alleged to be done in the construction of the Pennsylvania Railroad, are to view the premises, they are not prohibited from examining witnesses in the course of their investigation. (Pennsylvania Railroad v. Keiffer, 22 Penn. State Reports, 356.)

2. The term "costs" ordinarily includes officer's fees, as well as the party's own charges for witnesses, where witnesses can be legally be

called and examined. (Ibid.)

- 3. By the 4th section above referred to, it is provided that if any damages be awarded and the report be confirmed, judgment shall be entered thereon and execution may issue for the sum awarded; and the cost and expenses incurred shall be defrayed by the company. Held, that this provision included the petitioners' bill of costs for service on the viewers of notice of their appointment, and for mileage in such service; also for serving subpænas on their witnesses and mileage, and for the attendance of their witnesses and their mileage. (*Ibid.*)
- 4. For construction of act of 27th March, 1852, extending the privileges of the Sunbury and Erie Railroad Company. (See Packer v. Sunbury and Erie Railroad Company, 19 Penn. State Reports, 211.)
- 5. When a privilege is given by act of Assembly to a railroad company to extend or make connections as hereinafter provided, and two provisoes are appended, both must be considered, and the privilege cannot be exercised in a manner inconsistent with either, unless they are repugnant. (*Ibid.*)

6. An owner of cattle, suffered to go at large, and which are killed or injured on a railway, has no recourse to the company or its servants; on the contrary, he may be liable for the damage done by them to the company or the passengers. (Railroad Company v.

Skinner, Ibid., 298.)

7. A railroad company is a purchaser, in consideration of public accommodation and convenience, of the exclusive possession of the ground paid for to the proprietors of it, and of a license to use the greatest attainable rate of speed, with which neither the person nor property of another may interfere. No needless damage, however, must be done. (*Ibid.*)

- 8. In Pennsylvania, a railroad company is not bound to fence its road.
- 9. Where there was no proof of negligence on the part of the company, it was error to submit to the jury its existence as a debatable matter. (*Ibid.*)
- 10. A railroad company is not responsible, except for negligence or wanton injury. The question as to whether the owner of the animal killed knew of its jeopardy, was not a material inquiry in the case. (*Ibid.*)
- 11. This court will not take notice of evidence given to viewers appointed to assess the damage done by the location and construction of a railroad through the lands of an individual. Such evidence is not a part of the record. (Ohio and Pennsylvania Railroad Company v. Bradford's heirs, Ibid., 363.)
- 12. It was provided in the act of 2d April, 1831, for the incorporation of the Philadelphia and Delaware County Railroad, that either party may except to the verdict of the jury appointed to estimate the damages sustained, and that the exceptions shall be heard by the Court of Common Pleas, who may either affirm or set aside the verdict as shall be lawful and right. Held, that the Supreme Court would not set aside a report made under the act, on the sole ground that this Court differs from the jury as to the amount of damage. (Railroad v. Gesner, 20 Penn. State Reports, 240.)
- 13. The railroad company having for several years occupied the land of a lunatic, the law authorizing either party to institute the proceeding to have the damage ascertained, it was proper for the jury appointed in the matter, on the petition of the committee of the lunatic, to allow interest on the amount of damage sustained. (*Ibid.*)
- 14. The Pennsylvania Railroad Company, by its act of incorporation, has no legal rights upon the State works. The power to run cars over the Columbia & Philadelphia Railroad has not been given to it by the act of 13th March, 1847, which authorizes any railroad company to run cars over another railroad connected with their own, the Pennsylvania Railroad not being so connected with the State road, as the former terminates at Harrisburgh. (Pennsylvania Railroad Co. v. Canal Commissioners, 21 Penn. State Rep., 9.)
- 15. Though the word "individuals," in the act of 15th April, 1834, authorizing individuals to place cars on the Columbia Road, may include corporations, yet as such privilege is withheld by its act of incorporation, the Pennsylvania Railroad Company is not authorized by that act to use the said State road. (*Ibid.*)
- 16. Nor is such privilege given to it by the act of 23d April, 1852, authorizing it to purchase and hold certain real estate in the county of Philadelphia. Corporate powers are not to be created by implication nor extended by construction.
- 17. Though the act of 15th April, 1834, authorizes individuals to place cars on the Columbia & Philadelphia Railroad, yet an individual has no right to run thereon a car which has been condemned and was at the time unfit for service. (Miller v. Canal Commissioners, Ibid., 23.)

18. The Pennsylvania Railroad Company having no right of itself to run cars on the Philadelphia & Columbia Railroad, cannot do so in connection with an individual. (*Ibid.*, 23.)

19. In the petition for a mandamus it was said that the petitioner and company, without designating the persons, were the owners of a car which was offered for transit on the Columbia Railroad. In answer it was asserted that to the best of the defendant's knowledge and belief, the Pennsylvania Railroad Company, or some of its officers in trust for it, was the principal owner of the car. The answer was demurred to. It was held, that as the relator had not chosen to state who his partners were, he could not take advantage of the want of a positive statement in the answer, as to the name of his partners. The judgment in the matter is to be given against him who committed the first error. (Ibid.)

20. But in the petition and writ, the grievance being stated to be the refusal to attach a car belonging to David Miller individually, it was not incumbent on the respondents to render any reason for not

attaching a car belonging to David Miller & Company.

21. When a railroad company is about to appropriate the property of individuals, they are required by the act of 19th February, 1849, entitled, "An act regulating railroad companies," to apply to the owner of the property and endeavor to agree with him as to the compensation, unless the owner be absent or legally incapacitated; and they have no right to petition for the appointment of viewers until such effort has been made. (Reittenbaugh v. The Chester Valley Railroad Company, Ibid., 100.)

22. In the petition should be set out the names of the owners whose property is desired; the fact that they cannot agree as to the compensation; or that the owner is absent or legally incapacitated to contract; and the statement of fact should be verified by affidavit.

(Ibid.)

23. The act in question does not require the court to have the owners summoned to answer the petition, but it would be a good practice to have them notified to appear, or at least to have them notified before the viewers are appointed. And where the owner is absent beyond the reach of process, or incapacitated to contract, it is indispensable that the court should appoint guardians and make such decree or order as may be necessary to protect the interests to be affected; and the names of the parties shall be disclosed in the petition for the view. (*Ibid.*)

24. The act contemplates that notice be given to each owner of the time and place of the meeting of the viewers on his premises, and the evidence of notice should be submitted to the viewers, and returned with their report. The same day may be fixed for views of different

properties. (Ibid.)

13

25. The quantity, quality, and value of the lands or materials required should appear on the face of the report; and it should there be stated that there has been a comparison of the advantages and disadvantages; and the amount of damages, and to whom payable, should be reported. (*Ibid.*)

26. Consequential damages are not to be estimated unless provided for in the act of incorporation, and acts of incorporation are constitutional, though no provisions be made for such damages. But to enable the court to judge whether the assessment has been according to law, the report should exhibit the grounds of the assessment. (*Ibid.*)

27. This court will not inquire into complaints of inadequacy or excessiveness of damages. The law does not provide for bringing up the evidence, and the review will be confined to errors appearing on

the face of the report. (Ibid.)

28. The proposition is not sound as a general principle that "no car is road-worthy if the windows are not so constructed as to prevent the passengers from putting their arms through them;" but it is applicable to a road which, in some places, is so narrow as to endanger projecting limbs. (New-Jersey Railroad Company v. Kennard, Ibid., 203.)

29. A carrier of passengers or goods is bound to provide a proper vehicle; in default of which he becomes responsible for any loss or injury which may be suffered; provided it happen without negligence

or misconduct on the part of the party injured. (Ibid.)

30. A carrier of passengers is bound to omit no caution which may conduce to their safety. (Ibid.)

# IV. Court of Appeals of Maryland.

### BILLS OF EXCHANGE AND PROMISSORY NOTES.

1. A bona-fide holder of a negotiable note for a valuable consideration, without notice of facts which affect its validity between antecedent parties, if he takes it by indorsement before it becomes due, acquires a valid title and may recover upon it, although as between antecedent parties, the transaction may be invalid. (Gwynn & Co. v. Lee, et al., 9 Gill's Reports, Maryland Court of Appeals, 137.)

2. The defendant received a negotiable note, as security for the payment of money borrowed at the time of him, by the indorsers of the note, without notice that it had been fraudulently obtained from

the makers. Held, that he could recover upon it.

3. Before the makers can ask relief in equity against such a note. they must show that they have a defence of which they cannot avail themselves at law.

4. The defendant is not bound to exhaust his remedies against other securities placed in his hands at the same time for the same debt, before he can enforce payment of such note.

5. It is no defence that the debt for which the note was pledged as security was tainted with usury; the makers of the note cannot, for this reason, avoid the contract.

6. A promissory note was drawn by the maker, payable to the

order of the plaintiff the holder, "negotiable and payable at the Cumberland Bank of Alleghany." Upon the back of this the names of the defendants were written. Held, that this note itself is not primâ-facie evidence that the defendants placed their names upon it as makers or original promissors and not as indorsers. (Hoffman & Rizer v. Coombs, Ibid., 284.)

7. It is prima facie a note to be offered for discount at bank, and not elsewhere, and is made payable to the plaintiff, in order that he

may become the first indorser. (Ibid.)

8. A holder of a note which had been duly protested, and the liability of the indorser fixed by due notice, agreed with the maker to divide the amount of the note into three sums, for each of which a draft was to be drawn by the indorser upon the maker, in favor of the holder, payable on time, on the receipt of which drafts, accepted by the maker, the holder agreed to deliver up the note, to be can-The indorser assented to this agreement, and signed the drafts which were sent to him by the maker, by whom they were subsequently accepted and delivered to the clerk of the holder, who (the clerk) thereupon informed the maker he could have the note whenever he called for it. Afterwards the holder, finding that these drafts were not on stamped paper, informed the maker of the note of this fact, and told him he should expect other drafts, but gave no such notice to the indorser. No other drafts were given, and the note was never delivered up. Held, that the delivery of these unstamped drafts by the maker to the clerk of the holder was not such a performance of the agreement as to discharge the indorser from liability on the note. (Williams v. Hall, Ibid., 347.)

9. It was not, under this agreement, the duty of the holder to have the drafts stamped after they came to his possession, by complying

with the provisions of the act of 1844, ch. 28, § 8.

10. A bill of exchange was not presented for payment nor protested, until four days after its maturity. *Held*, that this presentment was not within a reasonable time, and the drawers were discharged. (Oscar & Berkley v. McDonald, et al., Ibid., 350.)

11. Whether the circumstances of any particular case are sufficient to dispense with demand and notice, is always a question of law,

addressed to the judgment of the court.

12. If the facts on which this question arises be admitted or undeniable, then it is exclusively a matter of law, to be pronounced by the court; but if the facts be controverted, or the proof be equivocal or contradictory, then the court hypothetically instruct the jury as to the law. (*Ibid.*)

13. If the drawer had no effects in the hands of the drawee, from the time the bill was drawn until it became due, he is liable without

proof of demand and notice. (Ibid.)

14. But where the drawee has something equivalent to effects, or has made an express or implied agreement to accept and pay, or the drawer has any reasonable expectation that the bill will be accepted and paid, he is entitled to demand and notice. (*Ibid.*)

15. The reasonable grounds required, are not such as would excite

an idle hope or wild expectation, or a remote probability that the bill will be paid, but such as create a full expectation, a strong probability of its payment; such as would induce a merchant of common prudence and ordinary regard for his commercial credit to draw a like bill.

16. There is no such stringent rule as to require the drawee to have funds of the drawer in hand, at the maturity of the bill, sufficient for its payment, in order to entitle the latter to demand and notice.

- 17. If the drawer, at the time the bill should have been presented, had the right to expect, reasoning upon the state of facts connected with the transactions as they then existed between him and the drawee, that this bill would be honored, he is entitled to demand and notice. (*Ibid.*)
- 18. The insolvency of the drawer furnishes no excuse for the neglect of the holder to demand payment and give notice of non-payment. (*Ibid.*)
- 19. A bill for \$3000 was drawn under the authority and assent of the drawees, upon the faith of consignments to be made to them by the drawers. The drawees were advised of the draft and of a particular consignment to meet it, and they promised to honor it when presented. The consignment was received by the drawers, and disposed of for \$7000, before the maturity of the draft. Other consignments were afterwards made, and other drafts drawn and accepted, so that at the maturity of the bill, the drawees had not funds sufficient to pay it, after the payment of drafts subsequently drawn and accepted. Held, that under these circumstances, the drawers were entitled to demand and notice.
- 20. The laches of the holders discharged the drawers; and the bill cannot be given in evidence on the counts, for money had and received.

## Usury.

1. It is no defence that the debt for which the note was pledged as security was tainted with usury; the makers of the note cannot, for this reason, avoid the contract. (Gwynn & Co. v. Lee, et al., 9 Gill's Maryland Rep., 137.)

2. Before the act of 1845, chapter 352, if the debtor or any person who had a right to represent him, asked in chancery to be relieved from the payment of any usurious debt, the principal and legal inter-

est must be paid. (Ibid.)

3. This act will not permit any person to avoid the contract in any suit whether in law or equity; the principal and legal interest are still due and to be paid, and the creditor is entitled to all the securities which he has, just as if, by the original terms of the contract, it had been to pay the principal with the legal interest. (*Ibid.*)

4. The act of 1845 cannot be regarded as violating the obligation of any contract; so far as it operates upon the contract of loan, it upholds and sustains it in part. (Baugher et al., v. Nelson, Ibid.,

229.)

5. Under the act of 1704, a party could in equity obtain relief

against an usurious contract only by paying or offering to pay the principal sum with legal interest.

6. Neither could the borrower maintain an action of trover at law, under this act of 1704, to recover goods hypothecated to secure an usurious debt, unless he tendered the amount actually loaned. (*Ibid.*)

7. If a borrower has paid money on an usurious contract, neither law nor equity will enable him to recover more than the excess paid beyond the principal and lawful interest.

8. The borrower is at all times and under all circumstances under a moral obligation to pay, or tender, the sum actually loaned, with

legal interest, as a fair compensation for its use. (Ibid.)

- 9. The act of 1845 only compels the borrower, who, as a defendant, seeks to protect himself against an usurious contract, to do precisely what he was obliged to do when he stood in the position of plaintiff. (*Ibid.*)
- 10. A borrower can have no right, as a matter of private justice, to repudiate his contract, so as to escape from the payment of the sum actually received. (*Ibid.*)
- 11. The act of 1845, chapter 352, is free from objection, and is to be enforced as a valid exercise of legislative power. (*Ibid.*)

### LIFE INSURANCE CASES.

### I. NEW-YORK. II, NORTH-CAROLINA.

New-York Supreme Court—General Term. Before Hon. Judges
Mitchell, (P. J.,) Roosevelt, and Clerke.

### I. New-York.

CLERKE, J.—Buckbee against United States Insurance, Annuity and Trust Company.—John C. Buckbee, the husband of the plaintiff, insured his life with the defendants, in the sum of one thousand dollars, for the benefit of his wife. The premium of ten dollars quarterly was to be paid in advance, the first payment on the 10th March, 1851, when the policy was executed; it was provided, that in case the premiums should not be paid on the days specified, that the policy should be void, but, in such case, it may be renewed at any time on the production of satisfactory evidence as to the health of the insured, and payment in full for back premiums, with interest; a reëxamination by a medical examiner of the company, (at the expense of the insured,) being in all cases indispensable when thirty days shall have expired. The premiums were not generally paid on the day on which they fell due, probably not in any instance—at all events, not in more than one of the four occasions; the first, which was payable on the 10th March, 1851, was not paid until the 4th April; the second, payable on the

10th June, was not paid until the 12th July; and it is not stated in the case when the third was paid; the fourth and last, payable on the 10th Dec., was paid on the 16th. Buckbee died on the 19th Jan., 1852, having suffered for nine weeks with a tuberculous disease of the stomach and liver, which terminated in his death. He was, therefore. far advanced in the disease at the time the last premium was paid, The defendants now insist that the policy having lapsed in consequence of the non-payment of the premium on the 10th of December, when it was payable, the plaintiff was bound, under the first of the conditions, accompanying and forming a part of the policy, to disclose the state of her husband's health at the time, and not having done so, the policy was not renewed, but is void. It will be borne in mind that in life insurances, after the original application is accepted, and the contract consummated, the insured has the benefit of the policy, whatever may happen to the health of the person whose life is insured, provided the insured complies with the conditions of the contract. So that, if the premium in this case had been paid on the 10th December, the plaintiff was under no obligation to say any thing about her husband's health, for whether he was sick or well, she was entitled to insure at the rate specified in the policy. The question, therefore, is, whether the omission to pay the premium for six days after it became due required any different course of conduct on her part. A very great latitude as to the time of payment, it will be seen, was permitted by the defendants with regard to the former payments, except one; and it does not appear that even that was paid on the day when it fell due; and such, I believe, is a very common, perhaps the most usual, practice in insurance companies. The premium is never expected upon the precise day in which it falls due. The practice of the defendants seemed to be very lax on this subject, and naturally induced the plaintiff to suppose that a literal compliance as to the hour and day of payment would no more be required on this than on the former occa-They had the right, undoubtedly, at any time, to regard this short delay as a deviation from the terms of the contract, and before they received payment of the premium, to require evidence of the health of the insured; but it may be well doubted whether in this case they could enforce that right without notice to the plaintiff that they intended no longer, unless this evidence should be produced, to receive the payment of premiums as heretofore, after they became The premium, however, was accepted without objection; and according to the evidence of Thompson, not a word passed between him and the clerk who received it about Buckbee's health. events, it was received on the 16th December, entered to the credit of the policy, and a receipt given for it, thus placing the parties, in my opinion, precisely in the same condition as if it was paid on the 10th, when it is admitted that whatever was the condition of Buckbee's health, the policy remained in full force. Under the circumstances, then, time can not be considered as the essence of such a contract; and it would be a very rigid, not to say inequitable interpretation, to say, that whatever might have been the previous practice of the defendants in waiting for payment of the premiums, if the insured avails

himself of the indulgence constantly granted, although in a much less degree, and the health of the person whose life is insured fails in the mean time, the insurers are to be allowed to take advantage of the remissness which their own conduct perhaps occasioned. It may, therefore, be well presumed that the delay of payment was not without the concurrence of the defendants; this being the case, there was a waiver of a literal compliance with the terms of the just condition, and in effect the policy did not require renewal within the meaning of that condition; for in truth it was not lapsed. The precise time, indeed, specified in the contract had elapsed, but judging from the acts of the parties, commencing with the acceptance of the original application, the policy, strictly speaking, had not lapsed. If this view is correct. it was not necessary to submit any questions to the jury relative to Buckbee's health, for, if the conduct of the defendants or their agents amounted to a waiver, and restored the policy to the same condition in which it would have been if the premium had been paid on the very day and hour on which it fell due, all inquiries of this kind were superfluous; if there was no waiver it was quite clear that there could be no renewal, because the plaintiff had it not in her power, pursuant to the first condition, "to produce satisfactory evidence" as to her husband's health; for he was then, no doubt, far advanced in the disease which soon after caused his death. The judgment should be affirmed with costs.

## II. NORTH-CAROLINA.

A provision in a policy of insurance excepting from liability the case of death "by means of invasion, insurrection, riot, or civil commotion, or any military or usurped authority, or by the hands of justice," does not embrace the case of the death of a slave, insured. who was killed in an armed and violent resistance of the authority of a patrol. Sprughil against N. C. Life Insurance Company, 1 Jones' Reports, 23.

Proceedings of the Institute of Actuaries, London, June 25.—John Finlaison, Esq., President, in the chair.—Two candidates were elected Associates.—Mr. Samuel Brown, one of the Honorary Secretaries, read a paper "On the Results of the Operations of the Gotha Life Assurance Bank for the first twenty-five years of its existence, particularly with respect to the Mortality amongst the Lives assured," by Herr Rath G. Hopf, of Gotha. The author stated that the Gotha Life Assurance Bank was founded at a time when there existed scarcely any knowledge of life assurance in Germany. Several previous attempts to found such a company had failed, and the few life assurances effected by Germans, especially in the Hanseatic Towns, could only be effected with English companies. As it was the first German Life Assurance Company, so it had risen to be the greatest of its kind in Germany, and, as concerns the number of the lives assured, to be the greatest in Europe. It was founded in 1829, and in

twenty-five years, ending in 1853, the number of members who had been admitted were 27,210, with assurances for 6,438,400l., of whom 18,427 were the remaining members at the latter date, with assurances for 4.159,3141.—The author discussed the question of the difference existing between the mortality of males and females, and the remark able fact, that notwithstanding the general impression that the longevity of females was greater than that of males at all ages, and that married women were especially favored in that respect, the experience of the Gotha office had been just the reverse. The prevailing majority of the females assured by the Gotha office, five sixths, were married or widows, and only one sixth not married. Nevertheless, their mortality, in the years of the capability of conception, under 40, exceeded that of men. Yet the Gotha office did not assure women in the state of pregnancy, but delayed the assurance for a favorable termination, and provided the next six weeks were passed without interruption of health. A table was given showing that the effect of selection of life amongst males was a greatly diminished mortality at almost every age in the first five years from admission, as compared with the same ages after the members had been admitted more than five years; whilst on the contrary, amongst females, the mortality was greater in the first five years than afterwards. The author looked for an explanation of this fact partly from the circumstance that women frequently concealed, even from their medical attendants, their bodily infirmities and irregularities of the system, and partly from the finer constitution of their nerves enabling them to feel earlier and before they were perceptible outwardly, those ailments and changes which might be going on in the system, and being thereby induced to avail themselves more readily of the advantage of life assurance. Other interesting results as to the intensity or frequency of various classes of diseases prevailing at different ages, of the proportion of suicides, the motives that led to them, and the mode in which they were committed, showed what materials for novel and useful inquiries might be extracted from the records of life assurance companies. It would be desirable if similar reports could be made in this country by the various companies whose stores of observations had been accumulating now for upwards of a hundred years.—The paper was followed by a discussion, in which Mr. Farren, V. P., Mr. Hodge, the Chairman. Mr. Lodge, and Mr. S. Brown took part.

RAILWAYS AMONG THE SWISS ALPS.—The engineers who are now occupied in the surveys for the new lines of railway which are to cross the Swiss Alps have estimated the expenses of the different passages as follows: Passage of the Splugen, 160,750,000f.; St. Bernard, 185,275,000f.; Lukmanier, 183,125,000f.; St. Gothard, 160,425,000f.; Grimsell and Albrum, 191,500,000f.; and Grimsell and Simplon, 205,550,000f. The St. Gothard will be crossed by the line from Lucerne to Locarno, which is the most difficult of all, and where avalanches are dreaded. The line of Rorschach will cross the Lukmanier to proceed to the Lago Maggiore and the Mediterranean; the St. Bernard will be crossed by the line from Lausanne to Aoste by Vevey, which line is the most direct between Paris and Geneva.

## CURRENCY OR MONEY.

Remarks on Currency or Money: Its Nature and Uses, and the Ejects of the Circulation of Bank-Notes for Currency. By a Merchant of Boston. 8vo. pp. 112. LITTLE, BROWN & Co.

#### CHAPTER SECOND.

SKETCH OF THE HISTORY OF THE MODERN CURRENCY OF GREAT Britain—(Continued from August No., p. 96.)

THE principal object of the currency laws, passed in Great Britain in 1819, was to restore the paper currency in circulation to par as compared with the precious metals. The act of 1844 was intended to restrict the occasional depreciations of the currency as compared with the currencies of other countries, by limiting the amount of paper money which could be issued by the banks. Those laws were in accordance with the wise policy, which should be found in the financial history of all civilized nations. That is to say, as a country grows richer, it ought to provide constantly a more and more substantial basis for any paper currency that it may have been considered expedient to tolerate at an earlier time, and under different circumstances, until the paper can be wholly withdrawn from circulation, and the currency of the country consist wholly of real money.

The act of 1844, for the renewal of the charter of the Bank of England, is the only important change in the currency laws of Great Britain since 1819. The object of it is, to limit the control of the Bank over the currency of the country by restraining its issues of paper money. It permits the Bank to issue notes, to the extent of the government stocks which it holds, not exceeding fourteen millions of pounds sterling, that having been found to be the lowest amount to which the issues of the Bank had been for many years reduced. It also allows the issues of post-notes, for the convenience of remittances, to the extent of two millions. For every note issued beyond these amounts (in all, sixteen millions sterling) it must hold an equal sum of the precious metals. It has, therefore, no interest in extending its issues of paper money beyond the sixteen millions, as it could not increase its loans or investments by doing so, but is obliged to keep

the whole of such excess on hand in bullion or coin.

The wisdom of this law has been questioned, and in some respects, it appears to be justly so, unless it was intended, as very possibly it may have been, only as a temporary measure, to prepare the way for abolishing altogether the circulation of paper money in England. The deposits of the government and of individuals always amount to many millions. Unexpected drafts upon those deposits may, at some time, place the Bank in a position that would cramp its operations, or render it necessary to transgress the law. Should the precious metals

in the Bank be ever entirely withdrawn, the law requires its circulation to be reduced to sixteen millions, including the two millions of post-notes. But, suppose the amount of the paper in circulation, including the post-notes, to be twenty-six millions, and the coin and bullion in the Bank to be ten millions, (which, certainly, may not be a weak condition for the Bank,) the payment by the Bank of drafts against deposits, if paid in notes, would create an excess of notes in circulation beyond the amount allowed by the act; while, on the other hand, if the drafts were paid in coin, the precious metals in the Bank would be reduced below the legal amount. The Bank, in such a case, though perfectly strong to fulfill its obligations, would seem to be checkmated by the law. Its only resource, then, unless a sufficient amount of its loans were falling due, would be to dispose of securities in order to get in some of its notes or coin; a resource that might produce great inconvenience to the public, and much loss to the Bank

The opinion has been expressed by eminent bankers, that, in case of a serious war, the Bank of England could not sustain specie payments; and, therefore, that an order in council should be issued, immediately on the commencement of such a war, to oblige the Bank to suspend specie payments at once, before its specie was drawn out. For, the very apprehension of an occurrence similar to that of 1797, would cause a run for specie, which would render a suspension unavoidable.

If the effect of war upon the currency of England, where the circulation of paper money is comparatively so limited, and where there are no bank-notes of a smaller denomination than five pounds, equal to nearly twenty-five dollars of our money, would cause a suspension of specie payments, what would be the consequences in the United States, where paper money is issued in notes of every denomination down to one dollar; and where there are more than twelve hundred different banks, spread over the whole country, and established in each of the different States by the State governments, at the discretion of each, and therefore subject only to a local and very limited control, and entirely independent of the influence of the national government?

From all these considerations it may be concluded, that few, if any, benefits now result from the use of paper money in England, except the profit to the bank. Considering the amount of specie which, under their system, must be kept in the Bank to be ready to redeem their notes on demand, and all the trouble and expense incidental to the manufacture of the notes, and the precaution necessary to guard against frauds, it is doubtful, if the account could be fairly stated, if the profit to the Bank be very great. Fifteen or twenty millions of coin would more than supply the place of the notes issued by all the banks in England. That amount of coin could be supplied to take the place of the paper in circulation without inconvenience or difficulty, during any of the seasons of plethora in the money market which often occur there, when new sources for investment are sought after in every direction. The inevitable laws of trade, which are just and gradual and uniform in their operation, would then be left free to

produce their natural effects upon the currency. The increase of real money, accumulated in times of prosperity, would prevent, in seasons of short crops, or of threatened or actual wars, the addition to the public calamity of the evils of those money panics, peculiar to the artificial system of paper currency, which are so disastrous in their effects upon the community, and may even for a time prevent the prompt and free action of the government.

The following is the official return of the circulation of the banks

in Great Britain on the 3d of September, 1853:

| The Bank of England notes,<br>Private banks, "<br>Joint-stock banks," |     | £22,836,269<br>3,676,104<br>2,984,560 | Specie, £16,986,088 |                        |
|---|-----|---------------------------------------|---------------------|------------------------|
| Total in England, "Scotland, "Ireland,                                | "   | £29,496,933<br>3,728,890<br>5,230,387 | 41<br>41            | 1,174,058<br>1,447,830 |
| Total in Great Brita  | in, | £38,456,210                           | Total "             | £19,607,976            |

#### CHAPTER THIRD.

### CURRENCY IN THE UNITED STATES.

I. Effects of a Paper Currency upon Domestic Industry. II. Increase of Prices inevitable. III. Home Manufactures. IV. Enlargement of Issues—Enlargement of Bank Liabilities and Loans. V. Objects of Trade and Commerce. VI. Currency and Capital. VII. Substantial Specie Currency. VIII. Negotiation of Government Loans. IX. Railroads.

Ir has been already shown that the great objection to the use of paper money for currency is, that it produces very injurious effects upon the industry of the country, by stimulating the importation of the products of foreign industry. This it does by the rise of prices which it causes, increasing thereby the cost of production. The variations that occur in the quantity or amount of it in circulation, render it a constantly fluctuating standard instead of a true measure of the value of other objects.

The first effect of an increase of the money in circulation in any country is apparently to make money plenty; but it is, in fact, a depreciation of its value. This is shown by the general advance that takes place in the prices of commodities of every kind. When the advance of prices has occurred, money becomes as scarce as it was before. It is true that it is not always the amount of money in circulation, which settles the question of plenty or scarcity of money. "Every business man knows, that to-day the circulation of the banks may be twenty millions, and that money may be so plenty in the market as to be worth only five per cent a year; and that a year from

to-day, the circulation remaining the same, money may be so scarce as to command eight or ten per cent per annum." But every business man does not appear to know that the natural and regular consequence of a large addition of paper money to the circulation is always to render money plentiful and cheap at first. This plentiful and cheap supply of money produces an artificial rise in the prices of property of every kind. So that within a year, unless the amount of money in circulation is still farther increased, so much more will be required to transact the same business, at the inflated scale of prices, that money will be in demand at eight or ten per cent per annum.

The increase of the money in circulation in any country will increase the prices, without increasing the real value of commodities, if considered without reference to its foreign commerce. The celebrated writer, John Stuart Mill, in his "Principles of Political Economy," says: "The uses of money are in no respect promoted by increasing the quantity which exists and circulates in a country, the services which it performs being as well rendered by a small as by a larger aggregate amount. Two million quarters of wheat will not feed so many persons as four millions; but two millions of pounds sterling will carry on as much traffic, will buy and sell as many commodities, as four millions, though at lower nominal prices." For example, suppose fifty millions of dollars to represent the amount of the circulating money in a country, and that flour is worth five dollars a barrel, iron twenty dollars a ton, and other articles in proportion. If the amount of circulating money should be increased to one hundred millions of dollars, this last-named sum would represent and perform the business, which was before represented and performed by the fifty millions. And the barrel of flour that before was valued at five dollars, all other circumstances remaining the same, may then be worth ten dollars. It would therefore appear that flour had doubled in value. But it is not so. It is only a nominal increase of value. For now that the barrel of flour is worth ten dollars, that sum of money will not produce more of other commodities than five dollars did before, as all other commodities will have risen in about the same proportion. With fifty millions of circulating money, the barrel of flour represented and was worth five dollars. With one hundred millions of circulating money, it represents and is worth ten dollars. And all other articles are represented in the same proportion in these two conditions of the amount of money in circulation. In the one condition, no more of any article could be purchased for one dollar, than in the other condition could be purchased for the half of it. This explains what is meant by the statement which seems so difficult of comprehension to some persons, that to those who live on salaries or wages, the effect of an artificial inflation of prices, by an increase of the amount of paper money in circulation, is to diminish the quantity of the necessities and conveniences which they can provide for their families. So that it may with propriety be said, that one dollar a day is not better wages for a laboring man, than fifty cents a day, unless it will buy more of those necessities and conveniences.

An increase of the amount of money in circulation, and the consequent increase of prices, are always gradual. The circumstances that regulate the current or market prices are so various, that the true cause of any change cannot always be traced at once. Supply and demand regulate prices when the amount of money in circulation is uniform. But supply and demand come through so many channels for articles in general use, that the extent of either is not always readily perceived. Any increase of prices is most commonly ascribed to an increase of demand, as compared with supply, that being the usual cause of the rise in the prices. When prices rise in consequence of an addition to the amount of money in circulation, it is because the increased supply of money furnishes additional power to purchase until it produces a demand that will carry all articles up in price to their fair value, in proportion to the extent of the increase of

money in circulation.

The effect of an increase of the amount of money in circulation on the price of any given article may be, after a time, counteracted or qualified by an increase of its supply, or by a reduction of the demand for it. For example, iron, which has been worth twenty dollars a ton, should be worth about forty dollars, if the amount of the circulation has been doubled, all other circumstances remaining the same. But the foreign manufacturer, instead of obtaining an increased price, may prefer to increase the supply of his iron. Twenty dollars a ton is, perhaps, more than he can realize for it at home, where the greater part of the iron he produces is sold. Therefore, instead of getting a higher price for a small quantity, as the Dutch did formerly, for their spices, he may prefer to increase the quantity of iron. He may continue to increase the quantity so long as it will sell for twenty dollars. In such a case, the increase of the amount of money in circulation increases the supply of iron from abroad, instead of increasing the price of it. But how is it with the manufacturer of iron at home? What is the effect on his business? He is differently situated. Twenty dollars a ton was a remunerating and satisfactory price to him before the amount of money in circulation was increased. But with the increase of money, the prices of all the elements that make up the cost of his iron have increased, and nearly forty dollars a ton would now be required to remunerate him for it as well as twenty dollars did before. He must therefore stop his works, and leave the foreign manufacturer to supply the whole quantity of iron needed for the consumption of the country. The price of the elements that make up the cost of the foreign iron remain the same as before. The paper money for which it is sold, being redeemable in specie, the proceeds of the iron can be returned in gold or silver. The home manufacturer, too, could exchange the proceeds of his iron for gold or silver; but it would be worth no more to him than the paper money, unless he wished to send it abroad to purchase and import foreign iron for the supply of his customers, instead of manufacturing it. But this benefit of a cheap supply of iron will not be of long continuance. The increased demand occasioned by stopping the manufacture at home, raises the price abroad, and the foreign manufacturers, perceiv-

ing that they have the market to themselves, gradually increase their prices, and realize extravagant profits. Thus the actual effect produced by increasing the amount of money in circulation, and thereby enhancing the prices of all articles of sale and commerce, is to increase the profits on foreign importations, and the inducements to extend them; while at the same time, it injures the domestic manufacturer, and oppresses the industry of the country, by increasing the expense of the labor, and of the cost of manufacturing.

To suppose the amount of the circulation of a country increased from fifty millions to one hundred millions, is apparently to suppose an extreme case. But additions of twenty to fifty per cent to the amount of paper money in circulation, not unfrequently occur, when the currency consists of paper payable on demand in specie, as it does in the United States. It is not usually an immediate increase. It may take a year or more to effect it. But it sometimes happens within a period of a few months. The amount of the loans of the Bank of the United States on the 1st of September, 1834, was \$47,059,498, and on the 1st of June, 1835, was \$63,649,646, being an increase of more than thirty-five per cent in the short period of nine months. The increase in the local banks, during the same period, was probably as great. The effect of the increase of paper money at that time upon prices, and the consequences resulting from it, which occurred a year or two later, will not soon be forgotten. The published statements of all the banks in the United States, show that their bills in circulation had been increased from fifty-eight millions in 1843, to about two hundred and four millions in 1854; and that at this last period, there was less than sixty millions of specie in all the banks of the country.

The state of trade in any country may be such that specie flows into it. That is, prices are low, rendering it profitable to export merchandise, and diminishing the inducements to import it. There is then a good demand for the products of the industry of the country for consumption and for exportation, and more or less specie is imported in return for the merchandise exported. But as the specie is not used for currency, it accumulates in the banks, forming the basis of an increase of the issues of their bills, which are put in circulation by loaning them freely. This facility in obtaining these loans stimulates the merchants and traders to increase their purchases of merchandise and other property. As the business of trading increases, prices rise, and a larger amount of money is needed. The banks are enabled to add still more to their loans, and to keep still more of their bills in circulation. Borrowing money with facility, traders are less anxious to realize the money for their merchandise by selling it. They prefer to pay their debts by creating new ones in the shape of bank loans, in the expectation of obtaining higher prices at some future time for their merchandise. Many become speculators, and, buoyed up by loans at the banks, are disposed to purchase the merchandise of others, rather than to sell their own, expecting thereby to force the consumers to pay them higher prices. The advance in prices at first encourages the manufacturer to increase his work.

But he soon finds that the prices of all the materials which he uses in his manufacture have increased in proportion, and therefore, that he gets no more profit than before. But not so with the importer of foreign manufactures. His merchandise costs him no more than it did before. The high prices will therefore induce him to increase largely the amount of his importations. Those high prices will, in the end, diminish the consumption of many articles, by raising their value beyond the reach of the many, who live on salaries and wages. Large stocks of merchandise will thus be accumulated. At the same time, the indebtedness of the merchants to the banks has increased. The amount of paper money, that is to say, the indebtedness of the banks to the community, will have been most dangerously enlarged. This speculative inflation continues and augments, until at last, the conditions of trade are entirely reversed. Prices being high, it is profitable to import merchandise, and the inducements to export it no longer exist. More or less specie is therefore exported in return for imported commodities. This export of specie may continue for some time before its effects on the condition of the currency become serious. But all the coin that can be spared will, in time, be sent away, and the demand will then come upon that which is absolutely necessary to the banks to sustain the circulation of their paper. All the resources of the banks will then be required to meet the demands against them. Those resources are the debts due from the merchants and traders, and they must be paid. But to pay them, these merchants and traders must either sell their merchandise, or borrow money outside of the banks on the best terms they can.

Whether the currency of the country consists entirely of the precious metals, or is a mixed currency, consisting in part of paper money payable in specie on demand, under the same circumstances the same effect would be produced by any great increase or reduction of the amount of money in circulation. But there would be a great difference in the intensity of the crisis in these two cases. Suppose, for instance, the whole amount of the currency to be two hundred millions of coined money. The gradual abstraction of twenty millions for exportation would produce effects that might not be greatly perceptible. But, if the currency consisted of that amount of bank paper convertible on demand in specie, and the whole amount of specie to support this circulation did not exceed sixty millions of dollars, the abstraction of twenty millions of coin to export, if the whole amount of the currency was reduced in any thing like the same proportion, would produce a reduction in the prices of property of all kinds that would render bankrupt a large portion of the business community. Money would become so scarce, and the value of property would be so much reduced, that many debtors would not be able to obtain money upon any terms to pay their debts. Many commodities would be exported to furnish funds to diminish the foreign indebtedness. For, until that indebtedness was settled in some way, either by the shipments of specie, or of merchandise, or by the failure of the debtors, the demand for specie and the contrac-

tion of the currency would continue.

Of all the articles that supply the wants of a well-furnished community, the proportion derived from foreign commerce is small. But in the United States, the foreign commerce, small as it is in comparison with the internal trade, now regulates and controls, through its effects upon the currency and the banks, the prices of all articles throughout the whole country. The object of trade and commerce is to supply the various necessaries, conveniences, and luxuries of life; and, whatever can be obtained cheaper from abroad, will be procured there. If the cost of production at home is enhanced by an increase of currency, the quantity of articles that can be obtained cheaper from abroad will be increased, and the quantity of articles that can be produced cheaper at home will be diminished. This will continue and increase, until it creates such a demand for the precious metals to export for the payment of imported merchandise, as to diminish the supply of the circulating medium of the country. Assuming the exports of the country to be equal in value to two hundred millions of dollars, (including the expenses of transportation or freight when in the vessels of the country, and the profits on the sales abroad,) this two hundred millions of dollars is the amount of foreign productions that can be imported with benefit to the country. Any extent of importations beyond it makes an indebtedness in specie, which must create a demand for the precious metals of the country to export. The intensity of that demand will control the amount of the currency, and the prices of all the property of the country, which amounts to many thousands of millions of dollars.

There is a distinction between money in actual circulation from hand to hand, which is usually denoted as "currency," and wealth that is not circulating, but is locked up in the possession of individuals, in various shapes of valuable securities, or deposits in banks, or even in actual coin which is denoted as "capital." It is only the money in circulation that affects prices. Hence it may and does often happen, that there is an abundance of "capital" in the country, while the money in circulation, or "currency," is not sufficient for the wants of the community. Much of this capital can at any time be changed into currency, by using it for the purchase of merchandise or other property. During any great money pressure, or scarcity, there are usually large amounts that remain quietly on deposit in the banks, for which the bills of the banks or specie could at any time be de-This abundance of locked-up money, or "capital," will always exist more or less, when, from any causes, those who possess money are deterred from investing it in trade, or other adventurous channels, or can find occasional opportunities to loan it at exorbitant When any such causes exist, capitalists are more and more indisposed to invest money in commerce or manufactures, or public works, and they are more and more resolute in keeping it locked up in bank deposits, or valuable securities, and sometimes in coin, waiting for some favorable opportunity to invest it. This state of things may produce what, at first sight, seems an absurdity, a community growing more straitened for money, at the very time when the

property and wealth in the hands of money-lenders and capitalists are daily increasing.

Nothing can be more unreasonable, or further from the truth, than the common statement of speculators and money-borrowers, that the amount of paper money, which can be used as a substitute for the coined money of a country, is so much gain to the community. They argue that the coined money, for which it is a substitute, will then become so much additional capital that can be applied to support some new purpose of domestic industry. If the currency of a country consisted wholly of coined money, and an addition was made to it of an amount of paper money, it would, to the extent of that addition, increase the volume of the currency, and thus would occur a corresponding rise in the prices of articles. The effect of this would be to increase the importation of merchandise from abroad, until a demand for specie were produced. Then the coined money would be gradually carried off to pay for the increase of imported merchandise, to the extent of the addition of paper money that had been made to the currency. If the coined money of the country is not needed at home for currency, in consequence of paper money being substituted for it, it can, in the existing condition of things, only be used to injure the labor and industry of the country, by being exported to pay for importations of the products of foreign industry. For the addition of paper money to the currency only creates a corresponding advance of prices, and, consequently, an increase of foreign importations.

If the precious metals are not used for currency, they will accumulate in the vaults of the banks, when they are not wanted for export. There they will form the basis of a greater issue of paper money, which will further depreciate the currency. In such case, by inflating the prices of all articles, they will give a greater impetus to the import of foreign commodities. It is not desirable that the banks should hoard up specie in their vaults, and issue for every dollar of it five or ten times the amount in their paper promises to pay, or, in amounts placed to the credit of individuals as deposits, which may be changed at any time into bills for circulation. The banks have now too much to do with the imports and exports of the country. They will continue to have this direct influence upon foreign trade, and the country will continue to be overstocked with foreign merchandise to the great injury of domestic industry, until the currency of the country becomes more substantial—until it consists more of the precious metals, and less of paper money. When the precious metals are used for circulation, and the country has a sound, substantial specie currency, sufficient in amount for the purposes of trade, all business, both foreign and domestic, will be regulated on more just and more correct principles. We shall then cease to hear complaints of the tariff, or of foreign interference with native industry; and the banks will find their true place, and become the servants, not the masters, of the money and currency of the country.

When cotton and breadstuffs, and the exports of the country generally, are sent abroad, and their proceeds are invested and returned in foreign merchandise, the surplus productions of the industry of the

country are exchanged for the surplus productions of the industry of other countries. The cotton and corn and flour and manufactured goods of the United States, the iron and cloths of England, the wines and silks of continental Europe, and the teas and spices of China and India, are interchanged. Thus is created a trade between those different countries that is useful and profitable to each one of them. If only 500,000 bales of cotton are manufactured in the United States, the remaining 2,500,000 bales of the cotton crop would be valueless without foreign trade. So with the surplus quantities of the iron and cloths of England; they would be valueless there without foreign trade. Therefore, to exchange the surplus products of the industry of the United States, which would be valueless at home, for the surplus products of England and other countries, which, without a foreign demand, would be valueless in those countries, is an advantageous and profitable trade.

But the foreign trade is no longer useful or profitable when it requires the exportation of the coined money which is necessary and useful at home for currency. When the importations of foreign merchandise are paid for otherwise than by exchanging for them the products of the industry of our own country, they come in competi-

tion with, and are an injury to, our domestic industry.

The very commencement and origin of trade and commerce is the exchange, which is made between individuals, of the products of their respective labor, by which their various wants are supplied. Subsequently occur the exchanges which take place between nations, of the surplus products of their industry. The mechanic in a country village, whether with or without the use of money or currency, obtains the necessary supplies for his family, by exchanging the products of his labor with his various neighbors. When, instead of continuing to rely alone upon his industry, he obtains the supplies for his current wants by parting with his furniture, or the tools of his trade, or the money which he has saved up and laid by in years of toil, he is not more improvident and unwise than is the nation that exports its coined money to pay for importations of foreign merchandise. Sickness may oblige the mechanic to do this, and a deficient harvest, or the worse evil of war, may oblige a nation to export its coin to pay for the necessary supply of breadstuffs for food. But, in both cases, they are vast misfortunes.

It is impossible, under the present system of currency and banking in the United States, that any large loans can ever be negotiated at home. The prospect, only, of a large loan would at once produce a panic in the money market. The banks would immediately stop discounting, to be prepared to pay back their deposits. By doing so, they would make money so scarce, and raise the rates of interest so high, that the capitalists, who own those deposits, could do better

with their money than to take the proposed loan.

The moment any accumulation of money occurs, it is deposited in the banks, and is used by them to increase their loans. The majority of the bank directors are usually active business men, and the largest borrowers of the banks. It is for their interest to prevent large gov-

ernment loans being negotiated at home, as they know, in that case, that the banks must provide the money by reducing their loans. By this reduction of the loans of the banks, money can be rendered so scarce and the rate of interest so high at home, that the large loans can be obtained on better terms abroad.

Parties who wish to negotiate large loans, whether for the government or for corporations, very naturally and properly endeavor to borrow the money where they can get it cheapest. There are, however, serious objections to a system of currency, which prevents the accumulation of uninvested money, and the power to take large loans at home. Under the present system of currency united with banking, an accumulation of unemployed capital cannot occur in ordinary times. For, as fast as money accumulates in the possession of individuals, it is deposited in the banks and loaned by them. If merchants and traders will not borrow, brokers and stockjobbers are always ready to take it, and to give stocks as security, often the stocks which they buy with it. As soon, therefore, as these deposits accumulate, they are loaned by the banks; and the more the banks loan, the higher prices will rise, and consequently new loans will be the more in demand.

When the government of the United States accumulated the surplus revenue of forty millions of dollars, which was afterwards divided among the States in 1837, it was deposited to the credit of the government in banks, and by the banks loaned to individuals and The more the government deposits increased, the more the banks increased their loans, and the more prices rose. The imports, and consequently the amount of the revenue, increased with the rise of prices. At the same time, and by the same causes, the uses and demand for money, and the demand for specie to export, were increased. When the government called on the banks to pay back the public deposits for distribution among the States, it was impossible for them to do it. They had loaned it out to parties, who had invested it in various ways, a large proportion of it in government lands. So large an amount could only be paid back gradually and slowly, as it had been received when collected by the government. The result was, that before the last installment was paid to the States, all the banks throughout the country stopped payment. The change in the value of property then became so great, that many of those banks that had extended their loans with the government deposits, lost all their capitals, and were never able to resume again. There were other causes combined at that time to increase the difficulty. One of them was the sudden check upon the negotiation of loans abroad, which had, for some time previous, been taken with great readiness, causing large importations of foreign merchandise. But no deficient harvest in Europe occurred in 1837 to aid the payment of that indebtedness, as happened in 1853.

The exports of the domestic productions of the United States for the year ending June 30, 1854, in merchandise, amounted to \$213,985,236, and in gold and silver to \$41,197,300. The greater part of the amount exported in gold and silver, if not the whole of it, was a

clear loss to the country, because the net amount of the importations of merchandise, which were \$274,134,733, could have been reduced more than forty millions of dollars without injury or inconvenience to any one. The reduction of the imports of that year to the extent of forty millions, though we did produce in California that amount of gold, would have furnished to the manufacturing industry of the country more protection than could possibly be obtained from the

national government by any tariff legislation.

If the government had made a loan in Europe during that year for twenty millions of dollars, it would, in effect, have added that, or a greater amount, to the importations. For, with paper money for currency, there was no use for specie at home, and the loan of twenty millions would have only served to pay for at least that increase of importations. If there have been of late no such loans made by the government, there have been many made by railroad companies and other corporations to a very large amount. The great increase in the importations for the last three years, and the excess of them over the exports of the same years were caused, in part, by those loans, and the results are evidence of the effect produced by increasing the amount of imports. In the latter part of the year, 1853, it became difficult to negotiate corporation loans abroad, and consequently, the export of specie was increased. Had it not been for the deficient harvest in Europe, which caused a great demand for, and a great increase in the export of breadstuffs in the autumn and winter of 1853, the demand for specie would have been so intense as to have caused much distress in the United States. The indebtedness, arising from the large importations, was so great, that the immense and unusual export of breadstuffs was paid for without any import of specie, or even interrupting its export. As the amount of money in circulation was not diminished by the export of specie, in consequence of the creation of new banks and the increased issues of paper money. prices were sustained, and the excessive importations continued. The export of specie was not diminished until the autumn of 1854. when the banks, at last, were forced to reduce their loans and their circulation to an extent that produced much distress and bankruptcy.

The loans negotiated abroad may have been convenient at the time, to the parties who borrowed the money. But all that was received for them, and all that was brought into the country in consequence of them, was an increased quantity of foreign merchandise to be sold in competition with the products of our domestic industry. All that remains now of those loans is the obligation to send back the amount of them at some future time. In the interim, we must transmit an "annual tribute" for the interest on them. It is estimated that this annual tribute now amounts to about twenty millions of dollars, and an examination of the official tables of the annual imports and exports will prove this to be not far from the truth.

It may be said that the railroads exist, which those loans assisted to build. But those roads would have been as effectually and surely built without those loans. No money was imported for the loans. The money that was invested in the roads was all furnished at home,

and so were the labor and materials, excepting only the iron rails. And there is iron enough in the country to have furnished them. The roads were partly built, and in most cases in actual use, before the loans could be negotiated abroad. The loan for the Western Railroad in Massachusetts, with the guarantee of the State, was negotiated in England at five per cent, a lower rate than would satisfy capitalists at home at that time. This was a consequence of the disturbed state of the money market, produced by the high prices and excessive importations, which this and similar loans had assisted to cause, whereby capitalists at home, in the course of that year, were enabled to get one or two per cent a month for their money. Is it to be supposed, that, with taxable property in Massachusetts, which, by the returns of the valuation committee of 1851, amounts to nearly six hundred millions of dollars, the Western Railroad, the first cost of which was about seven millions of dollars, could not have been finished but for that loan; and that the money to build it ought not to have been obtained without going to England? Very large amounts lay on deposit in the banks at that time, to the credit of our moneylenders, capitalists, and merchants. With a substantial and sound currency, every dollar of that loan, and of all the loans of the national government for the last twenty years, would have been readily taken by our own capitalists. But with the constant fluctuations of currency occasioned by the comparatively unrestricted power to issue paper money, every year presents the capitalists and money-lenders of the country with opportunities to loan money at much higher rates, and often to get double the legal interest, or even more for it. The parties in England who took that loan, had so little confidence in the paper money of our currency that they required the amount of the loan to be expressed in the currency of Great Britain, and the principal and interest to be paid in London in the currency of Great Britain.

At the worst of times, there is always sufficient money for every body who needs it to pay their debts, if they will give enough for it, and can give satisfactory security. But when the owners of money can make so profitable a use of it as to loan it at one per cent a month, or more, the banks must be prepared to meet the demand for it, by obliging their customers, to whom they have loaned it, to pay it back. To do this, those customers are often obliged to borrow it

It may be for the pecuniary benefit of a mere possessor of accumulated capital, that the whole credit and enterprise and industry of the country should be at the mercy of a "cheap currency," which admits of such frequent convulsions and fluctuations as may enable him to obtain exorbitant profits on his capital. But it is a remarkable circumstance, that an intelligent, commercial, and manufacturing community, with extensive resources, and with abundance of the precious metals, which their enterprise causes continually to flow in upon them, should cherish a system of currency that forces those precious metals to be used for their injury, instead of being used as currency for their advantage and benefit. Most of the gold that has been

brought into New-York by the steamers from California, is almost immediately transferred to the steamers for England, because it is more valuable for remittance to Europe, where it is used for currency, than for any purpose in the United States, where paper money for currency is preferred.

#### THE SOUTHERN COTTON MARKET.

Some Quixotic experiments have been recently attempted with a view to turn the natural course of trade, so far as the cotton market of the South is concerned. A "Southern Commercial Convention" was held in Mississippi on the 4th of July, to hear the report of a select committee which had been charged with the business of considering the expediency and practicability of establishing a direct system of trade between the Southern States and Europe. The Convention was in session two days, but it does not appear that any measure of importance was adopted. The Hon. J. J. McRae, the Governor of the State, presided.

At the opening of the Convention, Mr. C. G. Baylor, the projector of the scheme, and who recently visited Europe, on behalf of the Select Committee, to make arrangements for testing its feasibility, explained at some length his plan of operations. He proposes to establish in Germany the principal cotton depot or factorage, with a branch in New-Orleans possessing a capital of several million dollars, safely deposited, so that the planters should have ample assurances of its solvency and ability in every emergency to insure them against losses. After some discussion of this plan, and of irrelevant propositions urging Southern people not to purchase goods of Massachusetts manufacturers, and Southern lawyers not to aid in the collection of debts due to citizens of that State, a committee was appointed to investigate the scheme for direct trade, and the Convention adjourned to meet at Jackson in January next.

Such measures could be urged only by inexperienced men. It is not questioned by any sound merchant, planter, or factor, that the European and American consumer pays liberally for the cotton now derived from the South.

There is no obvious interruption to the harmonious workings of the system now developed, whereby Great Britain takes (as in the last years, 1853-4,) 1,603,000 bales of cotton from us; France, 374,000; Northern Europe, 165,000; and other foreign ports, 176,000: and it is all paid for liberally. Nor to the "American" system, which should be still further developed, and whereby our own mills consume 700,000 (and should consume one million) bales.

The Convention lost sight of the fact that the North mainly contributes towards the thirty millions of dollars in payment of this supply of 700,000 bales. A liberal interchange of products is all that

the North and the South require in order to maintain commercial equality and the due course of trade.

Liberal men conclude that the attempt to forestall the market, and force an artificial stimulus to the consumption and value of cotton, will fail. Capital and labor are nowhere better compensated than in the cotton-planting region of the United States.

The commercial portion of the newspaper press does not speak encouragingly of the leading object of this Convention, it being deemed as almost impossible to change the channels of a great

"The laws of trade (says the New-Orleans Bulletin) are fixed and immutable, and all the conventions in the world cannot change them; least of all can they be changed by Commercial and Planters' Conventions, the members of which, instead of being able to combine capital, are themselves dependent upon and subservient to capitalists. Just as sure as water runs down hill is the proclivity of trade and commerce to capital; and if the increased demand, with corresponding increase of price, attracts the cotton of the planter to the Continent of Europe rather than to Liverpool, it will go there without any extrinsic agency; but if these magnets of attraction are lacking, our exports will continue in the old beaten channel, in spite of all the resolutions of this or any other convention."

The Vicksburg Sentinel, in commenting upon the proceedings of the Convention, raises an objection of another kind, growing out of the repudiation of a portion of their State debt by the people of Mis-

sissippi. It says:

"We content ourselves now by calling attention to one circumstance which, it seems to us, will be fatal to the hope of persuading, the planters of Mississippi to act favorably upon Mr. Baylor's views. Every body, we presume, is well aware that the city of Amsterdam, which Mr. Baylor proposes to make the great emporium of our cotton trade, is the place of residence of Hope & Co., who call themselves, by virtue of their alleged purchase of the Union Bank bonds, the creditors of Mississippi to the amount of ten millions or so of dollars. Should Mr. Baylor's suggestion be carried out, and our planters ship directly to the commercial company, we should like to know what security they would have that Hope & Co. would not attach all monies which might be realized from the sale of the cotton over and above such advances as might have been made upon it? Their legal right to do so would be clear and unquestionable. No proposition of law is better settled than that if a municipal corporation—and a State is nothing more nor less—fails to provide the means to pay its debts, the private property of the individual members of the society can be seized upon and sold in satisfaction. Decisions to this effect have been made in various courts of the United States. Writers on the law of nations all recognize the same doctrine in the strongest terms.

"Such being the law, Hope & Co. would be very self-sacrificing indeed were they to find 500,000 bales of cotton in the hands of Mr. Baylor's company, on which twenty-five per cent in value, say \$600,000, were due to citizens of Mississippi, and were to stand by

and see the amount remitted here, without an effort to secure the heavy debt they claim to have against our State. The chances, it strikes us, are very strong that the planter drawing upon Mr. Baylor's house for the proceeds of his shipment, would have his bill returned to him under protest, with notice that the funds had been seized upon by Hope & Co., under process of garnishment, sequestration, or whatever they may call it in the legal phraseology of Antwerp or Amsterdam. Such a finale to the effort to establish direct trade would not be quite so pleasant to the grower and exporter of the cotton, however acceptable it might be to the holders of our bonds."

#### NEW BANK BUILDINGS IN NEW-YORK.

THERE are now in process of erection, in Wall street and its neighborhood, several large and costly edifices, designed for banks and offices. This fact is evidence of the energy and confidence of their builders, and we record it with much satisfaction. A brief description of some of them will be found interesting:

#### I. Tontine Coffee-House.

The old building, whose history has been repeatedly published, and which forms one of the land-marks of the lower part of the city, is removed, and is to be replaced by a new and splendid edifice, better suited to the uses of Wall street. It will be in the arched style of architecture, which may with propriety be called Tuscan. It will consist of a basement and four stories, and the exterior will be enriched with string-courses, imposts, arches, and richly-carved keystones, crowned with a massive cornice, in the style of the Florentine palaces. The edifice will be built of Caen stone and brick, and will, we are certain, present a very imposing appearance. The interior will be divided into suites of rooms for offices, which will no doubt be highly prized by business men.

The old Tontine Coffee House, when erected, stood, as is well known, on the strand of the East River, and was formerly used as a hotel. As such, it was considered very large, rather larger than was required to accommodate the strangers arriving in New-York. Its glories have departed, but the memories which cluster around them will linger in the minds of the old Knickerbockers. James Renwick. Jr., is the architect of the new building.

# II. BANK OF THE STATE OF NEW-YORK.

The old bank building of this institution having been sold to the United States government, for use in the revenue service of this port,

a new edifice became necessary, temporary accommodations being found in the Merchants' Exchange. The lot on the north-west corner of William street and Exchange Place was purchased at a cost of \$80,000, the building which covered it was torn down, and the foundations for a costly and elegant structure have been laid this spring. The lot is of an average width of thirty-seven feet on William street. and about ninety feet deep on Exchange Place. The edifice will be five stories high, besides the basement. The exterior will be in the Roman style of architecture, decorated with handsome window trimmings, and finished with Westchester marble, similar to that used for the fronts of Stewart's store. It is to be entirely fire-proof, with iron beams and floors of corrugated iron and concrete, and doubtless no expense will be spared in erecting it in the most substantial manner. James Renwick, Jr., is the architect; the mason work will be done by Mr. Banta; the iron work by Messrs. Cornell; and it is believed that when finished, it will be found perfectly adapted for its purposes, and an ornament to the locality in which it is erected. The first story will be occupied by the Bank, and the remainder is to be used as offices.

# III. MECHANICS' BANK.

This institution, whose corporate existence terminated on 1st January last, and which has been reorganized under the general banking law of this State, has resolved to replace its old banking building by a larger, more convenient, and more elegant edifice. The lot, Nos. 35 and 37 Wall street, which has a front of about 43 feet, and an average depth of about 100 feet, will be covered by what may be termed two buildings. The rear building will be occupied exclusively as the banking house, and is to be thirty-four feet by fifty-seven feet, and three stories high, lighted by a lantern composed entirely of iron and glass. The front building, which is to cover the full width of the lot, will be six stories high, fire-proof, and arranged for offices. The front on Wall street will be built of cream-colored New-Brunswick stone, in the Italian style of architecture. It will be divided into three parts, and the centre capped with a pediment. All the windows are to have richly-moulded architraves, and the string-courses bold and highly moulded. The new edifice will take a first rank among the many costly buildings by which Wall street is ornamented.

#### IV. Duncan, Sherman & Co.'s Banking-House.

Operations were commenced upon a new banking-house for Messrs. Duncan, Sherman & Co., on the corner of Nassau and Pine streets last season, and on the approach of cold weather were suspended, there being no great haste required, and the builders desiring that the work should be done under the most favorable auspices, in the most substantial manner. This spring the contractors are again busy, and the foundations are completed.

The new building will be forty-nine feet on Nassau street and

eighty-eight feet on Pine street, and will be five stories high, besides a lofty basement. The style of its architecture will be somewhat similar to that of the Metropolitan Bank, yet more massive and elaborate. Heavy cornices will surmount the first story, and the building. The windows of the first story will be arched and capped by pediments in the form of a segment, and the windows of the upper stories are to be plain, but capped in a similar manner. It is to be built of Belleville stone, quarried near Newark, N. J., which is of a very light color. The roof is to be of corrugated iron, the beams of rolled iron, and the whole structure entirely fire-proof. The first story will be occupied by the owners, and the second, which will be reached by a flight of marble steps, we understand has been engaged by August Belmont, Esq. The upper stories will be reached by means of a spiral staircase of iron. This building will be one of the most costly and magnificent in New-York, and its erection will give evidence of gratifying improvement in the architectural taste displayed in the erection of edifices for banking purposes. Its progress towards completion must be regarded with great satisfaction by the builders.

A. Saeltzer, Esq., is the architect, and the masonry will be done by

Mr. Bogart.

#### V. PROPLE'S BANK.

The People's Bank has commenced the erection of a building 37 feet on Canal street, and 63 feet on Thompson street. Thomas & Son, architects, have charge of the work. The front will be of freestone, with Corinthian columns, and the usual amount of ornamental work. The structure will be four stories in height, besides the basement, and cost about \$40,000. The work will be completed by next spring. The first story will be occupied by the Bank, and by insurance offices, and the upper stories for offices and light business.

#### VI. New Bank for Savings.

A massive and elegant structure of white marble is now nearly completed in Bleecker street at the head of Crosby street, designed for the "Bank for Savings," which now does business in Chambers street. Such an edifice has long been required by the pressure upon the limited accommodation of the present banking-house. It is designed in the Roman style of architecture. The front is divided into three parts, the middle projecting beyond the sides, and is ornamented with coupled Corinthian columns, "engaged" with a large round head window in the centre, ornamented on each side by Ionic columns and entablature supporting an archivalt and key-stone.

The round head is filled in, so as to make the aperture square at the top, and the tympanum is sculptured with a bee-hive and other emblems of industry and economy. On each side of the front is an entrance from a broad stoop into a capacious vestibule that opens into the banking-room, which is about fifty-three feet square and forty feet high. In the rear of the banking-room are the safes, treasurer's

office, stair-cases, etc. The directors' room is in the front of the building, over the vestibule, looking out on Bleecker street. In the basement are various apartments, designed for the convenience of the establishment.

The roof is all of iron, supporting a large dome of the same material, and the floor is of iron and stone, making a building completely fire-proof. The roof-framing is now all on, and the edifice is rapidly advancing to completion. It will be an honor to the high-minded gentlemen who have so long administered the affairs of the institution, which now ranks in all respects among the first in the country. It enjoys, in an eminent degree, the confidence of the laborer whose savings are small, but small as they are, of great importance to him. The amount on deposit with it exceeds six millions, and its ability to meet all demands upon it needs no heralding, after the triumphal manner in which it sustained the ordeal of last winter.

#### FINANCES OF TEXAS.

THERE are more minute inquiries being made throughout the country, as well as in Europe, as to the financial condition of the several States. In the computation of values of State loans, it is essential that we know in the first place what the existing debt is; secondly, the acts providing for an increase of indebtedness; and, finally, who are the financial managers in behalf of the State.

We annex, for the information of our readers, an official statement made up at the Comptroller's Office on the 1st May, 1855, of the portion of the debt of the late Republic of Texas, which, according to the decision of the Secretary of the Treasury and the opinion of the Attorney-General of the United States, is secured by a pledge of Impost Duties, exhibiting the rate of adjustment established by Texas and the rate proposed by the recent act of the United States Congress. Also the excess and decrease of each mode of payment compared with the other, and the dividend in the dollar, on the ostensible amounts realized by each mode of adjustment.

Of the eight and ten per cent bonds entered in the annexed statement, the State has paid \$298,065.35, principal and interest, which sum, under the Texas creditors bill recently passed by Congress, would be refunded to the State.

Interest has been calculated on all the liabilities issued to bear interest from their respective dates of issue, or from the date of the last payment of interest to 1st July, 1850, except on the first and second issues of Treasury Notes, on which interest is computed only to the 1st January, 1841, as it is considered that interest ceased to run at that time on those two classes of securities under the laws of Texas.

Gov. Pease, who is a candidate for reclection, as Governor of Texas, has issued an address to the people of the State, giving his views upon public and political affairs.

Those portions which are more interesting to people out of the State, relate to internal improvements and the public debt. He re-states, at some length, his former position on the subject of railroads, reaffirming his belief that no system can be successfully adopted in Texas, which is not based upon State aid, but opposing any plan which involves the use of State credit without a previous approval of the system by a vote of the people, or without the laying of a sufficient tax, at the time of issuing bonds, to secure the payment of interest.

He reviews at length the whole history of the debt of Texas, the State system of scaling in the settlement, and the connection of the Federal Government with it; in the obligations of the annexation resolutions, the boundary bill of 1850, and the act of the last Congress for the payment of the creditors, which is waiting the acceptance of the State.

Gov. Pease agrees with Senator Rusk, whose opinion on this subject we have heretofore published—that it is good policy for the State to accept the act of Congress, and put an end to a controversy which otherwise threatens to be interminable, and which is entailing constantly on innocent individuals intolerable hardships.

The debt of Texas is two-fold. One, and the largest portion, consists of those obligations and liabilities for which the duties on imports were pledged, while Texas was an independent republic. This debt, which is now the subject of controversy, and in which the United States are a party, was sought to be settled, first, by the boundary bill of 1850, and now by the act proposing a compromise between Texas and her creditors, the survey to be paid by the United States. The other portion of the debt, not secured by pledge of the customs, has been paid by Texas out of the proceeds of the five millions of bonds which were paid her under the boundary act. The reserved five millions have remained in the Treasury of the United States, because the three parties, the United States, the creditors of Texas, and the State of Texas, could not agree upon the acceptance and execution of the terms it proposed. The United States would not pay any of the money without a release in full, from every creditor of Texas; a majority of the creditors would not release Texas upon the terms of settlement which she dictated; and Texas was inflexible in her refusal to modify her law or change her position.

The five millions in the United States Treasury will, at the time of payment, under this act, with accumulating interest, if accepted, have reached to \$6,250,000. The United States offer to distribute among the creditors \$7,750,000; but it must be in full and final settlement, and accompanied by full releases from all the parties interested; and Texas must also release, entirely and finally, her claims against the United States growing out of Indian depredations. The bill requires a final clearing up of the controversy in all its branches, and for this the United States are willing to add \$1,500,000 to the grant of 1850.

The par value of the debt, with interest up to July, 1850, when the interest was stopped by a law of Texas, was \$10,029,307.60. The amount of debt acknowledged by Texas, at the graduated rate which she adopted on the same day, was \$4,436,639.18.

The new bill, therefore, would pay the Texas creditors about 77% cents on the dollar of the amount of their claims, allowing them the benefits of the interest for the time the United States bonds draw interest. If the Texas law were to prevail in the payment, the difference in favor of Texas would be about \$400,000. This will be increased by the consideration that some of the creditors of Texas would receive less by the act of Congress than they would under the Texas law; and the Governor thinks it a point of honor for the State to make this good. This amount is a little over \$100,000; so that the concession of Texas for the final adjustment of the affairs will be a little over \$500,000; that is, that the sum paid for and to her, will be less by that amount than what she expected to receive, and has hitherto insisted upon receiving, but which there has been no chance at any time that Congress would give her.

Gov. Pease is decidedly for acceptance; he thinks the subject ought to be referred directly to the people, and that it is their interest to acquiesce in the proposition of Congress. One alluring argument he presents is, that with this subject satisfactorily disposed of, Texas will be entirely out of debt, and with a surplus fund in her treasury of \$3,754,163.

#### MISSOURI FINANCES.

According to a summary prepared for the St. Louis Republican the bonded debt of the State of Missouri consists in bonds issued for miscellaneous purposes, and bonds issued or issuable to the railroads, as appear in the annexed tables:

#### MISCELLANEOUS BONDS.

| ь | •• | •• | •••  | 1863, | 100,000  |
|---|----|----|------|-------|--|
| 6 | 46 | "  | "    | 1863, |  |
| 6 | "  | "  | . 44 | 1863, | The second secon |
| 6 | 66 | 44 | 66   | 1856, |  |

#### CREDIT LOANED TO RAILROADS.

|                                 | Authorised. | Issued.     | To be<br>issued. |
|---------------------------------|-------------|-------------|------------------|
| Pacific Railroad,               | \$3,000,000 | \$2,750,000 | \$250,000        |
| Hannibal & St. Joseph Railroad, | 1,500,000   | 150,000     | 1,350,000        |
| North Missouri Railroad,        | 2,000,000   | 275,000     | 1,725,000        |
| Iron Mountain Railroad,         | 1,500,000   | 100,000     | 1,400,000        |
| S. W. Branch Railroad,          | 1,000,000   | •••••       | •••••            |
| Total,                          | \$9,000,000 | \$3,275,000 | \$4,725,000      |

The first issues of these last-named bonds took place in 1852. When all the bonds authorized shall have been issued, the total of the State debt will not exceed \$9,802,000, nor the interest charge be over \$587,805.

We will now inquire into the State's resources and such facts as bear upon its ability and willingness to meet this indebtedness.

According to the report of the State Auditor, made to the Legislature at its recent session, the valuation of the entire property assessed to the State Treasury was \$167,470,151, consisting of

| Lands, 12,901,237 acres, valued at | \$67,744,752          |
|------------------------------------|-----------------------|
| Town lots, 47,673 acres, valued at | 33,229,108            |
| Slaves, valued at                  | 30 494,760            |
| Personal property, valued at       | 22,974,571            |
| Notes and bonds, valued at         | 13,026,660            |
|                                    |                       |
| Total,                             | <b>\$</b> 167,470,151 |

The State owns of stocks in the Bank of the State of Missouri \$272,263.60, which is worth par; also lands granted by the United States under the act donating to certain States 500,000 acres in 1841, besides lands containing salines. The State has also three fifths of the net proceeds arising from the sale of lands in Missouri at the United States land offices, which were to be applied to the construction of roads and canals. For the two years ending in October last, the receipts into the State Treasury from the road and canal grant and from the 500,000 acre grant amounted to \$145,129.

# Funded Debt of St. Louis.

The total funded debt of St. Louis is \$3,905,096, and consists of bonds payable at the times set forth in the annexed table:

| Year.    | Amount,      | Year. | Amount.     |
|----------|--------------|-------|-------------|
| 1855,    | \$43,700     | 1870  | \$200,000   |
|          | 38,000       | 1871, |             |
|          | 28,000       | 1872, |             |
|          | 69,000       | 1878, |             |
|          | 118,896      | 1874, |             |
| '        | 45,000       | 1875, |             |
| 1861,    |              | 1876, |             |
| 1862,    |              | 1877, |             |
| 1863,    |              | 1878, |             |
| 1864,    | <b>►</b>     | 1879, |             |
| 1865,    |              | 1880, |             |
| 1866,    |              | 1881, |             |
| 1867,    |              | 1890, |             |
|          | 100,000      | 1891, | •           |
| Total of | bonded debt, |       | \$3,905,096 |

This indebtedness has been contracted for a variety of purposes, which may be stated in a general way as follows:

| For streets and street improvements,                                |
|---|
| For improvements of the harbor, 276,000                             |
| Construction of wharf,  |
| Erection and extension of Water Works,                              |
| General sewers  |
| District sewers,  |
| Purchase of Washington Square,                                      |
| Subscription to gas-light stock, 1,000                              |
| Subscription to railroads,  |
| Erection of city stores and purchase of block No. 7,                |
| Miscellaneous, being chiefly for funded debt, increased for various |
| improvements in the city,   |
| Total as before,  |

The St. Louis papers have been dilating at large upon the prospects and resources of their city, and felicitating themselves not a little upon their growing wealth. The act of the State of Missouri creating a sinking fund to extinguish the debt of the city, appears to operate favorably. The following are its provisions:

§ 2. There is hereby created a Sinking Fund for the city of St. Louis, the proceeds of which shall be appropriated exclusively to the purchase of bonds issued by said city. Said fund shall consist of the sale of the city stores in block number seven, also three fourths of the net proceeds of the sales of the city common made in the year 1854, and three fourths of the net proceeds of the sales of common and other lands belonging to the city, whenever further sales are made, also all the railroad stock belonging to the city in any railroad terminating in the city, or opposite to the same in the State of Illinois; and in addition thereto the treasurer of the city shall, on the first Monday in October, in each and every year, pay over to the Fund Commissioner, the sum of ten thousand dollars, out of the general revenue of the city, which, together with the money, notes, and railroad stocks above mentioned, shall constitute a perpetual and irrevocable sinking fund for the payment of the city debt.

Since this law was passed the sales of the property described amount to \$700,000, and we have seen a calculation from which it appears that at the maturity of the bonds, twenty years from their date, the sinking fund will be nearly or quite sufficient to provide for their payment, without any resort to taxation or new loans. This is a favorable showing, and is sufficient, as the citizens of St. Louis think, to give their bonds a high position in the financial world.

THERE are in the Southern States 74,031 cotton plantations, including all producers of more than five bales, 2681 sugar planters, including the smallest: 551 estates making more than 20,000 pounds of rough rice each; 15,745 tobacco estates of 3000 pounds each and over in Kentucky, Tennessee and Virginia; 8327 hemp planters in Kentucky and Missouri. Only such States are taken as are considered crop States.

# FINANCES OF TENNESSEE.

Statement of the Condition of the Debt and Resources of the State of Tennessee. Prepared by A. R. CROZIER, Comptroller.

COMPTROLLER'S OFFICE, NASHVILLE, May 17th, 1855.

The following statement is made in reply to interrogatories from individuals who have investments in the bonds of the State:

| Amount of bonds issued. | When due. | Amount<br>bonds issu      |    | Whon<br>due. |
|-------------------------|-----------|---------------------------|----|--------------|
| \$125,000 00            | 1858      | <b>\$</b> 481,00 <b>0</b> | 00 | 1873         |
| 66,666 66               | 1861      | 210,000                   | 00 | 1874         |
| 51,000 00               |           | 39,000                    | 00 | 1875         |
| 176,250 00              | 1863      |                           | 00 |              |
| 58,500 00               | 1864      | 102,800                   | 00 | 1877         |
| 1,321,000 00            | 1868      | 73,000                    | 00 | 1879         |
| 355,500 00              |           | 52,000                    | 00 | 1880         |
| 299,750 00              |           | 76,000                    | 00 | 1881         |
| 385,000 00              |           |                           |    |              |
|                         | 1872      | \$3,992,856               | 66 |              |

# The foregoing bonds bear interest as follows:

| \$1,691,000 | 00 at | 6 per | cent. |
|-------------|-------|-------|-------|
|             | 66 at |       |       |
| 2,074,440   | 00 at | 5     | "     |
|             |       |       |       |
| \$3,992,856 | . 66  |       |       |

#### Of the above there were issued,

| For stock in the Union Bank,                | \$250,000 | 00 |
|---|-----------|----|
| For capital stock in the State Bank,        | 1,000,000 | 00 |
| For stock East-Tennesee & Georgia Rialroad, | 650,000   | 60 |
| For stock McAdamized Turnpikes              | 1,401,856 | 66 |
| For building State Capitol,                 |           |    |
|   |           |    |
| 3   | 3.992.856 | 66 |

In addition to the \$3,992,856.66, actual indebtedness of the State, bonds have been loaned to various railroad companies, amounting to £2,374,000, bearing interest at 6 per cent, falling due 1892. Bonds indorsed for Nashville & Chattanooga Railroad, \$1,500,000, which fall due in 1878.

These bonds were loaned to enable the companies to purchase railroad iron. The grading was done by individual subscription, and the State owns none of the stock, (except in the East-Tennessee & Georgia Railroad,) but has a prior lien on the road, stock, depot, fixtures, etc., to secure the payment of principal and interest. The interest has been promptly met by all the companies.

The President of the East-Tennessee & Georgia Railroad, in his report of January 1st, 1855, states, that the Company has on hand

\$100,000 profits of the road, which he recommends should be "set aside as the nucleus of a sinking fund."

I understand from the President of the Nashville & Chattanooga Railroad Company, that a sinking fund will be raised next fall for the redemption of bonds due by that Company.

From the best information I have been able to obtain, I think the whole amount which can be issued under the existing laws of the State to railroad companies cannot exceed \$5,000,000. This will be issued if the companies chartered secure the stock and grade the roads ready for the iron. For any amount which may be issued, the State has a lien on road, stock, etc.

#### STOCK OWNED BY THE STATE.

| Stock.                               | Original cost.  | Estimated present value. |
|--------------------------------------|-----------------|--------------------------|
| Bank of Tennessee,                   | \$1,000,000     | \$1,000,000              |
| Union Bank,                          | 650,000         | 650,000                  |
| East-Tennessee & Georgia Railroad,   | 650,000         | 300,000                  |
| Franklin & Columbia Turnpike,        | 75,950          | 56,925                   |
| Lebanon & Nashville, "               | 80,000          | 48,266                   |
| Nolensville, "                       | 47,000          | 11,750                   |
| Nashville & Charlotte, "             | 30,000          | 20,000                   |
| Lebanon & Sparta, "                  | 85,000          | 21,170                   |
| Columbia Central, "                  | 139,00 <b>0</b> | 21,170                   |
| Nashville & Kentucky, "              | 50,000          | 12,500                   |
| Clarksville & Russelville, "         | 37,500          | 9,000                    |
| Columbia, Pulaski & Elkton Turnpike, | 126,600         | 12,233                   |
| Nashville & Murfreesboro', "         | 66,666          | 30,530                   |
| Gallatin & Cumberland, "             | 6,000           | 5,283                    |
| Gallatin,                            | 130,000         | 26,000                   |
| Cumberland & Stone's River, "        | 119,000         | 20,000                   |
| Total value,                         | \$3,292,716     | \$2,244,827              |

The above turnpike companies pay 6 per cent on the estimated value.

The dividends arising from the State stock in the Union Bank, are set apart for the purchase of the outstanding bonds of the State. Within the past year, \$120,000 have been purchased, which should be taken from the actual indetedness of the State. This was not done in this statement, because they have not yet been handed over by the Bank of East-Tennessee to be cancelled. There are other stocks owned by the State, and other sources of revenue not embraced in this statement, because they are set apart to the school fund and hospital. I have embraced in this statement the resources of the State which can be used to liquidate the debt, interest thereon, and the ordinary expenses of the State.

White population, (census of 1850,) 756,836; Slave population, do., 239,459.

#### REVENUE OF THE STATE FOR 1854.

| On \$219,011,047.81 property,             | 219,011 | 10 |
|---|---------|----|
| " 100,011 white polls,                    | 15,001  | 65 |
| Merchants' licenses and other privileges, | 115,000 | 00 |
| Bank of Tennessee,                        |         |    |
| Turnpikes and miscellaneous,              |         |    |

Bonds to the amount of \$500,000 were issued for stock in the Union Bank. One half of this amount was paid when due. No other bonds have matured. The stock was increased to \$650,000 by investing \$150,000 of the dividends in stock. Since that investment the dividends have been set apart for purchasing bonds.

#### RECAPITULATION.

# ILLINOIS FINANCES.

THE Treasurer of the State of Illinois has paid the January and July installments of interest upon the stocks of the State, at the agency, in the American Exchange Bank in New-York. In consequence of the failure of the late agents, the January installment was not paid as advertised, but it is now being paid under the direction of the Treasurer, and parties having claims for dividends, can now have them adjusted.

Suits are instituted in the Supreme Court against the securities of Julius Wadsworth, late agent of the State for paying the interest on the State debt.

In April, 1848, S. E. Wadsworth, Thos. Dyer, Mark Skinner, F. C. Sherman, and Hugh T. Dickey became the securities on the bond. It is stated by the Ottawa Republican, that the cases came upon demurrer to the declarations, and were argued before the Supreme Court by Trumbull, of Alton, and Mr. Beckwith, of Chicago, for th securities; and by Judge Dickey and Mr. Cook for the State.

The securities set up by way of defence that the bond was contrary to public policy and therefore void; that Wadsworth was not the agent of the State, but agent of Gov. French, and that they, the securities, undertook that Wadsworth should account for mone placed in his hands by Gov. French. It is replied on the part of the

State, that the law that required the Governor to pay out the money, necessarily implied that he should appoint an agent, as it was impossible that he could do it in person, some of the interest being payable in New-York and some in London, and it all fell due on the same day, and therefore the appointment of an agent was contemplated by the law, and was not contrary to public policy. That the securities have acknowledged by the bond that Wadsworth was the agent of the State, and are stopped from denying it, and that from the nature of the duties, he was agent of the State and not of the Governor. And that the securities contemplated are accountable for all money placed in the hands of Wadsworth by authority of the State. The argument of the demurrer occupied two days, and a large number of authorities were quoted on both sides. The court have the matter under advisement. As this is a matter that the public feel a deep interest in, we shall publish the opinion of the court as soon as it is delivered.

#### PHILADELPHIA FINANCES.

THE Six per Cent Funded Loan of Philadelphia is quoted at 94; that of Pittsburgh at 81, while Cincinnati is quoted at 95\(\frac{1}{4}\) a 95\(\frac{1}{4}\). Contrasted with these quotations, we find New-York City Five Per Cents in demand at 100 a 102. Boston Five per Cents have long been at par, and are now scarce.

To illustrate the financial condition of Philadelphia, the Committee of Finance of their Common Council made a report a few days since. We learn from it that the total amount of receipts, actual and estimated, for the current fiscal year is \$4,321,917. The ordinary and extraordinary expenditures are estimated at \$5,718,568. This leaves a deficit of \$1,396,651 for the year. If we add the reduction of taxes for the rural districts, namely, \$40,930, the deficit will amount to \$1,437,581. But if we deduct on account of the appropriations to the highway department, and one or two other items, amounting to \$125,000, there will be a cash deficit of \$1,312,581. The Committee represent that there may be saved, by proper economy, from the unexpended balance of appropriations to highways, the sum of \$200,000; and also a sum of \$20,000, an excess in the appropriations for the police, amounting in the aggregate to \$220,000. Thus the estimated deficit of receipts to meet the expenditures, including the estimated interest in the funded debt payable on the 1st of January, 1856, will amount to a little more than a million, namely, \$1,092,581. They, therefore, propose an ordinance to authorize the Mayor of the city to borrow, at not less than par, on the credit of the city corporation, from time to time as may be required by the City Treasurer, such sums of money as may be necessary to pay claims against the corporation, and to meet the expenses of the city govern-

ment, not exceeding in the whole the sum of one million of dollars, at a rate of interest not higher than six per cent per annum. The consideration of the ordinance was postponed until Monday. The Committee at the same time conclude

- 1. That the sale of city property, not actually required for public purposes, is demanded by every consideration of wise economy and sound policy.
- 2. That in the administration of our fiscal affairs, an enlightened and rigid economy should be practised and enforced by councils.
- 3. That no system of finance which looks to loans to meet the ordinary and current expenses of government, ought to be tolerated; but that any excess of such expenditures over the ordinary revenue, should be met by an increase of taxation.
- 4. That this should be the inflexible policy of the city government, and the expenses, including the payment of the interest on the public debt, should be confined within the revenue.

# BANK STATISTICS.

## New-York.

The following is a Comparative Table of the Liabilities and Resources of the Banks in this State in 1848, '51, '54:

| LIABILITIES.           | Dec., 1848.                             | Sept., 1851.            | Feb., 1858.                 | June, 1854.           | June, 1855.                  |

It will be seen by this statement that the general aggregate of the liabilities and resources, the increase since June, 1854, is very slight, namely, in round numbers:

| Capital,       | \$2,500,000 |
|----------------|-------------|
| Deposits,      |             |
| Bank balances, | 1,800,000   |
| Loans,         |             |
| Specie,        |             |

At the same time, the profits have declined \$500,000; circulation, \$2,700,000; cash items, \$4,600,000.

This statement includes the returns of 278 banks, (exclusive of the Greenwich Bank, and exclusive of 46 banks now winding up.)

# Banks of Wisconsin, July 2, 1855.

BRITISH REVENUE.—The supposition current early in July, of an intention of the Chancellor of the Exchequer to propose an increase of 10 per cent in the duties on imported produce was strongly revived on the 26th, and a large number of payments were made at the Custom-House on tea, sugar, etc., by dealers desirous of securing the advantage of the existing rates.

N.B. All Stocks not specified as Bonds are transferable by inscription. All Bonds (except Hudson 1st and 2d Mortgage and Uric Convertibles) are payable to bearer.

# COINS, COINAGE, AND BULLION.

THE Mint, at Philadelphia, has not of late communicated, as formerly, for publication, the monthly summary of coinage and deposits. From a paragraph in the *Philadelphia Ledger*, we learn that the business for May was very limited. The total gold deposited was \$496,000; silver purchases, \$372,200; total of gold and silver deposits, \$868,200. Total gold coinage, \$355,756; total silver, \$446,000. Total number of pieces coined, 1,635,845. The gold coinage was mainly in double-eagles, and the silver very largely of quarter-dollars. The Mint is now paying certificates as far as No. 725.

At San Francisco, according to the Alta Californian, the Branch Mint announced a resumption of business on the 1st May; and that journal adds:

"Should such prove to be the case, it will, of course, prove a subject of sincere congratulation among all business parties; but, at the same time, we cannot conceal our disgust at the whole course of the government regarding the coinage of gold in California. It is not generally known, but is nevertheless the fact, that the principal private assay-office in the country effects over fifty per cent more toward the supply of coin to the country than the United States Mint The highest point reached by the Mint has been about \$1,500,000 per month in coin. The Assay-Office has, for weeks at a time, manufactured from \$60,000 to \$80,000 per diem. banker in the State will acknowledge that but for the Assay-Office the financial crisis in this State would have been prolonged for weeks and To it the holders of bullion had to look for coin, and but for it San Francisco might at this moment have been bankrupt. Mint here should be of a capacity to coin \$5,000,000 per month. The Philadelphia establishment should be broken up; the New-York Assay-Office should be changed into a Branch Mint; but the great government manufactory should be located in San Francisco."

The suggestion that the parent mint should be established at San Francisco, and abrogated at Philadelphia, will not meet the assent of the bankers or merchants who control the gold. It is known that three fourths (or more) of the California gold product are held by Eastern capitalists, partly on their own account, and partly for European account; and it cannot be decided until the gold reaches New-York, whether it would be better to transform it into bars or coin. Hence the necessity of having the metal in a rough state conveyed to New-York, the great depot or channel of transit to Europe.

Independently of this, the working expenses of a mint in San Francisco are necessarily heavier (perhaps double) those in New-York. As this cost is to be finally borne by the banker or consignee at New-York, there is no inducement to maintain an expensive establishment for coinage in any portion of California.

# OUR SILVER COINAGE.

The Washington correspondent of the New-York Courier says: "The Treasury is now burthened with the custody of over five millions of dollars in small change, from half-dollars to three-cent pieces. Two or three years ago, there was a universal complaint of the scarcity of small coins, either American or foreign. Mr. Hunter's coinage bill was passed, slightly reducing the actual value of our silver coin, and providing for its more rapid manufacture. The expected results have followed. The wants of circulation have been fully supplied; but another less desirable consequence has ensued, to wit: this small change has become a drug. People will not take it, and the law makes it a legal tender in sums of not over five dollars. Though the inconvenience of an inadequate supply of small change was a serious one, prudent financiers expressed doubts of the soundness of the remedy adopted at the time it was proposed. Orders have been issued to suspend the coinage of quarters and halves, and the operations of the Mint are much reduced."

#### United States Mint.

THE following circular has just been issued by the Director of the United States Mint:

MINT OF THE U.S., Philadelphia, July 23, 1855.

The Director of the Mint gives notice, in pursuance of an authorization from the Secretary of the Treasury, and in consequence of the present accumulation of silver coin at the Mint, that from and after the first day of August next, and until further notice, the purchases of silver for coinage will be paid for in silver coins only, and not in gold.

The silver offered for purchase will be weighed, melted, and assayed, as usual, and the standard weight determined therefrom, in ounces troy, to the hundreth part of the ounce; and will be paid for (as at present) at the rate of one dollar twenty-one and a half cents per standard ounce. The receipt given at the first weighing must be presented by the seller or his order, and usually payment may be expected on the day following the date of receipt, or the second day following.

For the information of bullion dealers, country banks, etc., it may be stated that, according to the above rate of purchase, the yield of various classes of coin or bullion will be about as follows:

| Five-franc pieces,   | 99              | cents each. |
|--|-----------------|-------------|
| Mexican and South-American dollars                           | 106±            | do.         |
| Old Spanish dollars,   | 105             | do.         |
| Revolutionary or "hammered" dollars, (often mistaken for the |                 |             |
| Spanish dollar,).  | 101             | do.         |
| Half-dollars of the United States coined before 1837,        | 52 <del>1</del> | do.         |
| The same since 1837 to the last change of standard in 1853,  | 521             | do.         |

Quarter-dollars are proportionately less productive of premium, while dimes and half-dimes coined before 1837 have lost rather more

by wear on an average than the premium would make up; those coined since 1837 to 1853 will average a premium of 3½ per cent on their nominal value.

| German, Swedish, Danish, and Norwegian crowns,                | 111 | cents each. |
|---|-----|-------------|
| Old French crowns,  | 114 | do.         |
| German floring  | 411 | d <b>o.</b> |
| Prussian and Hanoverian thalers,                              |     | do.         |
| American plate, best manufacture, 120 to 122 cents per ounce. |     |             |
| Genuino British plate, 125 cents per ounce.                   |     |             |

These regulations will take effect at the branch of the Mint at New-Orleans when the purchase of silver is resumed at that institution, of which notice will be given by the Superintendent.

At San Francisco the purchases may be paid for in gold or silver, at the option of the Superintendent thereat, until a sufficient supply of silver bullion is received to meet the public demand for silver coin at that institution.

James Ross Snowden,

Director United States Mint.

#### IS SILVER A LEGAL TENDER?

Correspondence of the Bankers' Magazine.

Boston, August 7, 1855.

TO THE EDITOR OF THE BANKERS' MAGAZINE:

DEAR SIR: Will you please state in the September number of your Magazine, to what amount or extent silver is a legal tender by banks in payment for bills, etc.? The present abundance of silver induces this inquiry. An answer through your Magazine, with such authorities as can be given, will much oblige many bankers, as well as your

Subscriber.

Remarks. — This is a subject that every bank officer should be familiar with; not only for his own satisfaction, but to enable him to act advisedly whenever the question arises at his own counter. Our "Subscriber" will find the law on this point, in full, page 737, Bankers' Magazine, March, 1853, and other laws of the United States and miscellaneous information on the same subject in the same volume, pages 187, 656, 737, 835, 838, and 916.

The three-cent silver coins are a legal tender to the amount of thirty cents only. (See Act of March 3, 1851.)

"And be it further enacted, That from and after the passage of this act, it shall be lawful to coin at the Mint of the United States and its Branches, a piece of the denomination and legal value of three cents, or three hundredths of a dollar, to be composed of [three fourths silver and one fourth copper, and to weigh twelve grains and three eighths of a grain;] that the said coin shall bear such devices as shall be conspicuously different from those of the other silver coins, and of the gold dollar, but having the inscription, United States of America, and its denomination and date; and that it shall be a legal tender, in payment of debts, for all sums of thirty cents and under; and that no ingots shall be used for the coinage of the

three-cent piece herein authorized, of which the quality differs more than five thousandths from the legal standard; and that in adjusting the weight of the said coin, the following deviations from the standard weight shall not be exceeded, namely, one half of a grain in the single pieces, and one pennyweight in a thousand pieces." (Act of March 3, 1851, c. 21, § 11.)

The new coins authorized by the Act of March, 1853, are legal tender to the amount of five dollars only, namely, fifty cents, twenty-five cents, ten cents, and five-cent pieces. The new coin was depreciated about seven per cent, namely:

|                 | Act of 1837.     | Act of 1853.<br>Grains. |
|-----------------|------------------|-------------------------|
|                 | Grains.          | Grains.                 |
| Half-dollar     | 2061             | 192                     |
| Quarter-dollar, | $103\frac{1}{8}$ | 96                      |
| Dime,           |                  | 38 40-100               |
| Half-dime,      | 20∯              | 19 20-100               |

The Act of March 3, 1853, is to the following effect:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the first day of June, eighteen hundred and fifty-two, the weight of the half-dollar or piece of fifty cents shall be one hundred and ninety-two grains; and the quarter-dollar, dime, and half-dime shall be, respectively, one half, one fifth, one tenth, of the weight of said half-dollar.

"\(\xi 2\). And be it further enacted, That the silver coins issued in conformity with the above section shall be legal tenders in payment of debts for all sums not exceeding five dollars."

As to whether the depreciated silver coin is a legal tender for bank bills in Massachusetts, is for their courts to decide. The Statute of the Commonwealth provides:

Banks shall be liable to pay their bills, notes, checks, drafts, etc., to the holder in specie. (See Massachusetts Bank Laws, Bankers' Magazine, 1852-3, pp. 686-687.)

The act of 1852 provides that banks shall pay their notes in gold or silver. (Bid., p. 706.)

American Iron.—It is stated by the Louisville Journal, that the Iron Mountain (Mo.) Railway Company has made a contract at advantageous rates with the Cambria Works, at Jamestown, Pennsylvania, for nine thousand tons of rails, to be manufactured at their works and delivered on the line of the road in Missouri, between the 1st December, 1855, and 1st July, 1856. This rail is to weigh 62 pounds to the yard, and the quantity contracted for is sufficient for the entire road to Pilot Knob. The works at which this iron is to be manufactured are among the most extensive in the United States; the parties in interest are in every way responsible; and knowing the quality of material, perfection of machinery, and skill of the workmen engaged, we have no doubt that the iron will be of very superior quality. The desire to get a new road ironed, heretofore has led to the purchase of many cargoes of inferior foreign iron at a high cost, when it would have been true economy to have waited somewhat for, and paid a handsome advance for American iron.

#### FOREIGN ITEMS.

Gold in England.—The arrivals of gold from Australia continue heavy. The ship Red Jacket arrived at London on the 26th ult., with 138,643 ounces, valued at £545,000. The ship New Great Britain had left Port Philip with 35,000 ounces, and another ship would leave on 12th May with about 100,000 ounces, making an aggregate of 273,000 ounces, equivalent to about 4,600,000 dollars. These large accessions of gold help to sustain the English market, under the pressure of the heavy loans that are in contemplation for the French and the British governments.

Advices from Australia give evidence of large products from the copper mines, and of great abundance of laborers. The annexed memorandum is from the

English and Australian Copper Company:

Adelaide to the 25th of April. The Harry, with 270 tons of ore, was ready to sail, and the Norman, with about 400 tons, was expected to be ready in a fortnight. The manager writes: 'Mr. Williams is proceeding with the production of copper. Labor is redundant at last. Six weeks ago we had unusually heavy rain, and in ten days this parched-up country was green again. Dry weather followed, and I began to dread another exceptional winter, a dry one. My fears are, however, now dispelled. The weather is again rainy and seasonable, and I think we may almost already count upon a good harvest, and, what is of much importance to us, abundance of feed for the next nine months. I cannot conclude without remarking that every thing is now looking very promising for next season.'"

New Banks.—The Bank of London have announced that they intend to commence business on the 22d of August, both at the Hall of Commerce and No. 450 West-Strand. Their terms are to be similar to those of the Union Bank.

The Union Bank of Australia (parent office in London) have declared the

remarkable dividend of thirty per cent.

The Union Bank of London has declared the extraordinary dividend at the rate of 20 per cent per annum on a capital of £600,000 paid in. The deposits, circular notes, etc., of the Bank amount to £8,363,460.

INSTITUTE OF ACTUARIES, LONDON.—The seventh ordinary meeting of the Institute of Actuaries was held in May, 1855, at the Rooms of the Institute in St. James's Square; E. J. Farren, E-q., Vice-President, in the chair.

Dr. Guy read a paper "On the Analogy Existing between the aggregate effects of the operations of the Human Will and the Results commonly attributed to Chance," The author commenced his essay by quoting the well-known sentiment of M. Quetelet: "It must be confessed that, distressing as the truth at first appears, if we submit to a well-followed-out series of observation of the physical world and the social system, it would be difficult to decide in respect to which of the two the acting causes produce their effects with most regularity." Though he (Dr. Guy) admitted the justice of the sentiment, he did not participate in the feeling of distress which M. Quetelet expresses He was quite prepared to find that the reproduction, year by year, of nearly the same figures, as the ultimate expressions of the working of the will in a number of persons, bore considerable analogy to the figures which embody the proportionate annual number of births and deaths in the same country, or the annual success of some gambling speculation. He thought that the numbers which express the aggregate or ultimate results of the conjoint operation of a number of causes of variable and inappreciable intensity might be expected to present many analogies and coincidences, though the causes were ever so different in their nature, and though the events or actions in which they issue were termed physical in one case and moral in another. The author went on to observe that writers on the doctrine of probabilities had taken the analogy between the results ordinarily attributed to chance, and results brought about by physical or moral causes, too much for granted, and that it was time that the assumption should be put to the test of experiment. The author then proceeded to describe the experiments which he had performed. He abstracted from the books of King's College Hospital the attend-

ances of men and women by groups of 25 up to 1000 facts, and also the proportion of cases of pulmonary consumption to cases of all other diseases up to 5000 facts. Then assuming that the proportions for the 1000 and 5000 facts respectively were the true proportions, he proceeded to substitute balls of different colors for the men and women, and for the cases of consumption and of other diseases. These balls he drew out from a bag blindfold, by 25 at a time, until all of them were drawn out, and noted down the results. These results, embodied in several tables, were placed side by side with the figures obtained from the Hospital books, and showed a degree of resemblance which, in the opinion of the author, fully justified the theory which had given rise to his experiments.

The paper led to a long discussion, in which the following took part: Mr. Scott, Mr. Porter, Mr. Pinckard, Mr. Lodge, Mr. Tucker, V.P., and the chairman; and Dr. Guy having replied, the meeting was adjourned to Monday, the 25th of June next.

STATISTICAL.—April 16, 1855. Sir I. P. Boileau, Bart., V. P., in the chair. The Earl of Carnarvon, Lord R. Cecil, M.P., Sir C. Trevelyan, W. Brown, M.P., P. Hardy, F. Hendricks, I. K. Aston, T. A. Welton, I. A. Welton, and R. Hunt, were elected Fellows. A Ten Years' Retrospect of London Banking, by J. W. Gilbart, Esq.—The author commenced by reciting the provisions of the Bank Charter Act of 1844 in respect to shareholders, and entered into an analysis of the London banking establishments. The number of private banking firms who attended the Clearing-House in 1855 was twenty-five, having an aggregate of 103 partners. The number of private banking firms east of Temple Bar who were not members of the Clearing-House, was 21, having 54 partners. The number of private banking firms, west of Temple Bar, was 13, having 48 partners, making a total of 59 London private banking firms, having a total of 205 partners. The author then proceeded to classify the London Joint-Stock Banks: they were 6 in number, and had, in 1855, an aggregate of 4323 shareholders, namely, 3176 gentlemen, and 1147 ladies. Among the gentlemen were 64 officers in the army, 20 officers in the navy, and 144 elergymen. Analyzing the female shareholders of 5 out of the 6 banks, it appeared that 73 were married, 329 were widows, and 693 were spinsters. In 1845, the proportion of female shareholders to gentlemen, was 18 per cent. In 1855, they were 36 per cent, indicating thereby that, during the last ten years, the ladies had become more enamored of London joint-stock banks than gentlemen. In 1855, the joint-stock banks carried on business in 23 localities in London. The paid-up capital of the London joint-stock banks in 1855 was £2,772,795; the surplus fund, £486,217; and the deposits, £26,338,588.—London Athenaum.

FRENCH LOAN.—The London Times, of the 4th, under its city head, remarks: "The official notification of the French loan for the full amount of £30,000,000, caused the English funds to open with dullness this morning; but an active demand for stock on the part of the public subsequently caused a decided improvement. Consols for the account, which left off yesterday at 91 ex. dividend, were first quoted at 90½ to 91, whence they advanced to 91½ to 91½, at which they remained up to the termination of business. The receipt of firmer prices from the Paris Bourse contributed to the feeling of steadiness, but there was a complete absence of foreign news. Omnium left off at 4½ to 4½ premium; Bank Stock, 211 to 212; Reduced, 92 to 92½; New Three per Cents, 92½ to 92½; Terminable Annuities, (new Loan,) 16 15-16; Long Annuities, 4; India Bonds, 32s. to 35s.; Exchequer Bills, (March,) 22s. to 25s.; (June,) 19s. to 22s. premium; and Exchequer Bonds, 100½ to 101."

Forfeiture.—Before the British Admiralty Court, during the present month, a vessel engaged in the Odessa trade was condemned under a claim of the British government. This vessel left Odessa under the Tuscan flag, laden with linseed, on the 28th of February, last year, and arrived at Hull on the 18th of June, when she was seized by the officers of the Customs, on suspicion of being Russian property. Proceedings were commenced against her, but were abandoned under the idea that, being a Russian vessel, she was protected by the order in Council. On the 27th of June she was liberated, and might have proceeded where she pleased. The cargo was discharged on the 6th of July, but the ship remained at Hull. In Jan-

uary last she was seized again, and the present proceedings instituted. A claim for her restoration was given in by Mr. Bowden, of Hull, on behalf of a merchant of Galma Carleby, in Finland, a subject of Russia, in which it was alleged that she was protected under the order in Council.

The Court (Lushington presiding) was of opinion that she was not protected by the order in Council from that period when she might fairly have quitted England. It appeared, however, that she had been advertised for sale. It had not been contended that Russian vessels could come to England, dispose of their cargoes, and then remain to carry on barter and sale. To allow such a proceeding, was against British pedicy. On that and other grounds he was bound to condemn the vessel, but he did not attribute the slightest blame to the gentleman who appeared on behalf of the Russian merchant.

#### MISCELLANEOUS.

RAILROAD IRON.—We shall continue our indebtedness to England for railroad fron, until the iron works in the States can be placed upon a solid footing, and free from the vacillating policy of Congress. A late circular from Liverpool says:

"The demand for manufactured iron is steady, and orders from America last mail were more plentiful than for some time past: the Staffordshire makers, however, at their preliminary quarterly meeting, wisely determined not to advance prices at present. The demand for rails has improved, makers being stiff at our quotation. In pig iron the business doing continues very limited, and price has receded a little. The period having arrived for shipments to fall off, last week's were only 8100 tons against 12,600 tons for the corresponding week of last year, whilst for the 26 weeks of this year, the shipments are 27,000 tons less than for the same period of last year. In the Manchester district, Staffordshire pig iron is extensively superseding Scotch, at the present high price of the latter."

## BANK ITEMS.

New-York.—Mr. F. W. Edmonds having resigned the Chamberlainship of the city in consequence of dissolving his connection with the Mechanics' Bank, Mr. Robert Kelly, one of the directors of that institution, has been offered, and has accepted the situation. Mr. Edmonds's accounts with the city have been found to be perfectly correct.

New-York City.—Abraham Parkhurst, Esq., hitherto Cashier of the Farmers & Merchants' Bank at Middletown Point, New-Jersey, has been elected Cashier of the St. Nicholas Bank, as successor to Robert S. Oakley, Esq., who is now Cashier of the American Exchange Bank.

New-York Bank Securities.—The Bank Department has decided that the Banks holding securities in the Department which are over-due, cannot be allowed to let them remain without interest. Mr. Schoonmaker has just issued the annexed circular to the banks:

"BANK DEPARTMENT, ALBANY, July 30, 1855.

"The Stocks required by the General Banking Law to be deposited with the Superintendent as security for the circulating notes issued under it, to the several banks and bankers, are, in all cases, to be stocks of this State or of the United States, bearing interest of six per cent per annum, or to be made to be equal to stocks producing such interest.

producing such interest.

"I hold for the ——\$ —— of stocks revenue certificates past due and drawing no interest. You are therefore required to substitute for this amount such other securities as the law requires, or to make the same equal to a stock bearing an interest of 6 per cent per annum, by a further deposit of stocks equivalent to 6 per cent or one year's interest on the amount thus matured; or, if your accounts will bear such reduction, to return and cancel such an amount of circulation as would be equivalent to such interest. In your case the amount required would be \$——.

"This should be done without delay.

"M. SCHOONMAKER, Superintendent."

New-Hampshire.—The charter of the Lancaster Bank has expired, and continues business only for the collection of its assets. On the first of June there were only two thousand dollars of its bills outstanding; and these will be redeemed at the Suffolk Bank or at the Bank in Lancaster on demand.

Manchester.—The Merrimae River Bank was organized on Wednesday, at Manchester, N. H., by the choice of directors.

MAINE.—The Secretary of State in Maine has just issued a statement of the condition of banks of that State, compiled from returns made by the cashiers of the several banks in June last. From this statement we learn that there are now in Maine sixty-nine banks, with an aggregate capital of \$7,442,350. The bank having the smallest capital is the Newcastle Bank, having a capital of but \$40,750. The Canal Bank, Portland, is the largest, having \$600,000. The oldest bank in the State is the Lincoln Bank, Bath, whose original charter bears date June 16, 1813. The American Bank, Hallowell, and the Gardiner Bank, Gardiner, were both started in January, 1814.

The following statement exhibits the condition of the banks in the aggregate:

| Capital stock paid in,                      | \$7,442,350 00 |
|---|----------------|
| Bills in circulation,                       |                |
| Net profits on hand,                        | 500,378 08     |
| Cash deposited, etc., not bearing interest, |                |
| Cash deposited bearing interest,            | 102,985 90     |
| Gold, silver, etc., in banks,               | 769,399 77     |
| Real estate,                                |                |
| Loans,                                      |                |

The aggregate amount of the last dividend was \$312,062.45, leaving a fund of reserved profits of \$368,266.

New Banks.—Acts were passed at the last session of the Legislature of Maine, to incorporate the Alfred. Auburn, Bath, Canton, City Bank, [Biddeford,] Fairfield. Oakland, People's, and West-Buxton Banks; and to increase the capital stock of the banks of Winthrop, Belfast, Bucksport, Casco, Easton, Merchants', Portland, Ocean, State, Ticonic, and Union Banks; and the surrender of the charters of the China and Atlantic Banks accepted.

MASSACHUSETTS.—Thaddeus Nichols, Esq., has been elected President of the Union Bank, Boston, in place of the late Chester Adams, Esq.

Boston. — The receivers of the Cochituate Bank, Boston, presented their third report to the Supreme Court, upon which a notice was ordered, returnable on the 2d Tuesday in September. The whole amount of claims proved is \$355,564.94. The outstanding liabilities of the Bank are stated as follows:

| Bills in circulation, | \$14,426 | 00 |
|-----------------------|----------|----|
| Deposits,             | 1,974    | 29 |
| Other claims, say     | 8,500    | 00 |
| Total                 | \$24.900 | 29 |

The amount of claims proven on which a dividend has not been paid is \$7794.25. The amount of cash on hand is \$44,374.68. This is sufficient to pay 50 per cent on the claims proved within the last six months, and an additional (second) dividend of 10 per cent on the whole list of claims, being 2856 in number, leaving a surplus for future dividend. These dividends will be probably ordered next month, after the report of the receivers has been examined by a Master in Chancery, and passed upon by the Court. The prospects of a third dividend are quite as favorable as has been here-tofore entertained by the receivers. The present amount of assets is \$367,561.84, of which \$59,117.33 are considered good, and the remainder of doubtful value; but from which the receivers expect to realize something.

Harwich.—The Bank of Cape Cod has been organized under a charter granted by the last Legislature: and will commence business at Harwich Centre in a few days.

CONNECTIOUT.—The following laws were passed by the Legislature at its late session:

1. Amending charter and increasing capital stock of Connecticut Bank of Bridgeport.

- 2. Amending charter of Elm City Bank of New-Haven.
- 3. Amending charter of Home Bank of Meriden.
- 4. Amending charter of Mattatuck Bank of Waterbury.
- 5. Incorporating "The Rockville Bank."
- 6. Increasing capital stock of Thames Bank of Norwich.
- 7. Amending charter of Tradesmen's Bank of New-Haven.

Hartford.—The Mercantile Bank, Hartford, which was organized under the general law, has accepted a charter, and has increased its capital to \$500,000. John W. Seymour is President, and J. B. Powell, Cashier. This bank made a semi-annual dividend of 5 per cent payable in July last.

Meriden.—The books of the Home Bank in Meriden were opened on the 8th July, and the requisite amount was readily subscribed. At a subsequent meeting of the stockholders, a board of nine directors was chosen. S. W. Baldwin, Esq., was chosen President.

New-Jersey.—The Gloucester County Bank, at Woodbury, N. J., was organized in August. Mr. Wm. R. Tatum was elected President, and Jas. B. Caldwell, Cashier. The capital of the bank is \$100,000, one half payable by the 1st January, 1856, and the other half by 1st July, 1857. The directors are personally responsible for the debts of the Bank, and the stockholders to an equal amount of their stock.

Pennsylvania.—We have already announced a new bank as established at Philadelphia, and another at Pittsburgh. There are three others now in process of organization; namely, the Mauch Chunk Bank, at Mauch Chunk, Carbon Co., capital \$100,000. II. Anthracite Bank, at Tamaqua, Schuylkill Co.; capital, \$100,000; President, Richard Carter, Esq.; Cashier, John Hendricks, Esq. III. Allentown Bank, at Allentown, Lehigh Co.; capital, \$100,000; President, Jacob Dillinger, Esq.; Cashier, William H. Blumer, Esq.

Lockhaven.—The Lockhaven Bank, at Lockhaven, Clinton county, 107 miles N. W from Harrisburgh, will commence operations in September. President, L. A. Mackey; Cashier, L. H. Evans.

INDIANA .- Of the new State Bank of Indiana, the Cincinnati Price Current says: "The parties who were to a considerable extent successful in getting a State Bank Law, framed to order and adapted to their desires, passed by the Indiana Legislature last winter, experienced more difficulty in starting the machinery than they anticipated. This is attributable to two causes; namely, the refusal on the part of the Legislature to loan to the new organization the State capital invested in the old bank—and the want of capital on the part of the clique who succeeded in getting the bill passed. Some of the parties prominent among the latter, have been to New-York, with apparently tempting offers for capitalists, but they met with little or no success. Wall-street operators are not disposed to furnish capital for banks, to be managed entirely, or nearly so, by parties who have no great amount of capital, but little capacity, and still less reputation for honesty. It is expected, we understand, that the next Legislature will loan the State capital to the new bank. This is the clause that was stricken out of the bill last winter; it is the one that would have made the charter valuable; and of course no effort will be spared to secure its passage by the next Legislature. In the mean time, the corruption and wire-working connected with this matter have become known, and public opinion setting against the managers, the machinery, as already remarked, starts off very badly."

MICHIGAN.—The Michigan Inquirer says that the final dividend of moneys of the Government Stock Bank, out of the stock deposited with the State Treasurer for the redemption of the notes of the North Bank at Ann Arbor, will be paid on the 3d of July. The Inquirer states the amount of the proceeds of the sales of these stocks to be \$39,000, and the amount of notes presented for redemption \$96,500: whereupon it remarks:

"The holders of the certificates will therefore receive about 39 or 40 cents on

each dollar. The balance will have to be credited to the admirable care which the late State officers took of the public interest. Were such a transaction to occur in commercial circles, as this which has disgraced the State, the perpetrators would be brought very speedily before the courts of justice, and the press which would attempt to excuse or palliate the offenders would be considered as yenal as the actual criminal."

Country Banks recently held at Syraeuse, have issued a circular, submitting articles of association for the establishment of the proposed "New-York Country Bank Exchange." Each bank uniting in the plan is to deposit two per cent on its circulation with the manager, who is to be named their legal redeeming agent. Exchanges are to be made, and the balances settled and paid daily. The agency shall receive notes of country banks, at the legal discount, and the notes of the banks belonging to the association shall be redeemed at one fifth per cent. If the expenses of the agency shall exceed its earnings, the deficiency shall be assessed upon the banks in the association.

An annual meeting is to be held on the second Wednesday in May in each year, at which each bank shall have one vote. The officers shall be a President, an Executive Committee of five, and a Manager. The Manager, to which post Geo. W. Cuyler, of Palmyra, is appointed, shall have a salary of \$5000 a year. The first executive Committee shall consist of G. H. Mumford, Rochester; G. W. Tifft, Buffalo; E. B. Judson, Hamilton White, Syracuse; J. N. Starin, Auburn; S. D, Hungerford, Adams; W. R. Osborne, Binghamton.

The articles provide, also, for the admission of banks to the association, for their expulsion for cause, and for their withdrawal.

When fifty banks execute the articles, the agency may be put into operation; and banks are expected to answer the circular as soon as the 20th instant.

Foreign Copital invested in New-York Banks.—The New-Yorker Staats Zeitung, leading journal of the German population, in encouraging the establishment of a German bank in this city, holds forth as follows:

"For years the establishment of a German bank has been repeatedly spoken of but from the selfishness of some of our leading bankers, fearing a dangerous competition, all efforts hitherto made have failed. The necessity of such an establishment is equally felt by importers and by jobbers—the latter, up to this time, being deprived of ordinary facilities that are enjoyed by American jobbers; and should the number of our banks be increased ten-fold, American institutions of this kind would not be available for them. Therefore the German merchants of this city want a German Bank, to be managed by such of our countrymen that are perfectly acquainted with the commercial customs of this country, men of experience and integrity, and of influence abroad; for if a German bank in New-York is to exert a favorable influence in all directions, it must be established with a large capital, equal at least to that of the largest American bank in existence. This capital, however, should not be drawn from our merchants, but from capitalists in Germany, who willingly, at present, invest their money in American securities, yielding interest at the rate of six and seven per cent, and who undoubtedly would be ready to invest large sums in bank shares, likely to pay from ten to fifteen per cent annual dividend; the advantages open to a German bank being comparatively more numerous than those open to similar American institutions.

"The most important objects of a German bank in New-York would be to facilitate and to increase the importation of German manufactures, by acting as agent between importers here and manufacturers abroad; also to facilitate and increase the export of American produce and manufactures to the Continent of Europe, to establish branches in the upper part of this city and in various cities of the West, etc. With such branches saving banks should be connected, and there is but little doubt the savings of the Germans would rapidly flow in. A German bank at New-York should act as financial mediator between the United States and Germany."

The Staats Zeitung then proceeds to enumerate the advantages a German bank would derive from its wide-spread operations, many of them quite evident.

In relation to the German Bank now organizing in this city, the Staats Zeitung

says: "We do not expect it to answer the demands of our mercantile community. Mr. Ballin is a man of high standing here, but we fear his influence is not strong enough to induce the investment of German capital; we therefore would have preferred to see one of our older bankers at the head of this enterprise. If the capital is to be drawn from our merchants, they will be deprived of the means necessary for their legitimate business, and make them the first applicants for assistance; and if the capital is only temporary, or not fully paid in, the position of the bank would be rather precarious.

"We therefore repeat, a German bank in New-York, to answer the general wants of our merchants, and to yield a reasonable profit to the shareholders, should be established with a large capital drawn from Germany, and equal in rank at least to our

largest American bank.

#### BANK DIVIDENDS, AUGUST, 1855.

| New-York City.               | Capital.  | Year '52. | Year '53. | Year '54 | 1855. |      |

The Madison County Bank, Cazenovia, has declared a dividend of five per cent, payable on the first of August. This is the sixth surplus dividend of five per cent, paid during the last seven years, and with their usual semi-annual five per cent dividends, make an aggregate return to the stockholders of 100 during that time.

# Notes on the Money Market.

NEW-YORK, AUGUST 24, 1855.

Exchange on London, at Sixty Days' Sight, 9\frac{1}{2} a 9\frac{9}{4} Premium.

The money market for the past month has exhibited continued ease. The superabundance of capital is shown in the enlarged volume of bank loans; now amounting in the aggregate to over one hundred millions of dollars. The rapid changes in the banking items at this city, during the past few weeks, are exhibited in the following table:

| 1855,    | Loans.       | Specie.      | Circulation. | Deposits.    |
|----------|--------------|--------------|--------------|--------------|
| June 2,  | \$91,197,658 | \$15,897,674 | \$7,555,609  | \$76,348,286 |
|          | 92,109,097   | 15,005,155   | 7,502,568    | 77,128,789   |
| June 16, |              | 14,978,558   | 7,452,161    | 77,849,454   |
| June 23, |              | 14,705,729   | 7,885,658    | 79,118,185   |
| ,        | 95,577,212   | 15,641,970   | 7,894,964    | 81,908,965   |
| 4        | 97,852,491   | 15,481,093   | 7,743,069    | 85,647,249   |
|          |              | 16,563,756   | 7,515,724    | 85,616,688   |
| July 21. | 99,029,147   | 15,918,999   | 7,407,086    | 82,079,590   |
|          |              | 15,920,976   | 7,409,498    | 81,625,788   |
|          | 100,118,569  | 15,298,358   | 7,642,908    | 83,279,990   |
| Aug. 11. |              | 15,280,669   | 7,714,401    | 88,141,320   |
| Aug. 18, | 101,154,060  | 14,649,245   | 7,610,106    | 81,948,671   |

A comparison of the returns for the third week in August, in each of the past three years, presents the following statement:

| Loans.                     | Specie.                      | Circulation. | Deposits.    |
|----------------------------|------------------------------|--------------|--------------|
| Aug. 20, 1833,\$93,866,970 | <b>\$11,</b> 692,55 <b>2</b> | \$9,414,696  | \$55,517,748 |
| Aug. 19, 1854 92,880,103   | 14,253,972                   | 8,855,523    | 73,534,568   |
| Aug. 18, 1855,             | 14,649,245                   | 7,610,106    | 81,948,671   |

The stock market promptly responds to the flattering exhibit of our city banks. Every description of stocks indicates this continued abundance of capital. The State six per cent loans that have been for six or twelve months past quoted 5 to 15 per cent discount, are now approaching par, and we think will soon command a premium. We refer to the copious stock tables on a previous page, in which the advanced quotations of State, city, county, railroad, and other bonds, and of railroad shares are fully detailed. Reading Railroad shares, after paying a dividend this month of four per cent, are now in demand at 98% a 99. New-York Central Railroad shares have also realized a dividend this week of four per cent, and are now quoted at 10314 offered and 104 asked by holders. The shares of our western railroad companies now better appreciated, as they promise a liberal return in dividends to the holder. Galena & Chicago Railroad is in active demand at 110% a 111. Michigan Southern Rallroad, 104. Michigan Central shares are also a favorite in the market, and former quotations are fully maintained.

The following is a careful summary of the fluctuations in the share market for the past six weeks:

| July 13.                                   | July 20. | July 27. | Aug. 8.      | Aug. 10.    | Aug. 17.    |

\* Dividend off.

Business in our city, which has been very dull for a year past, is now reviving, and promises to be active during the fall. There is also a promise of renewed speculation in real estate operations in this vicinity, an invariable indication of abundant capital. The fall trade is now opening, and while it will be confined to the legitimate wants of the country, and free from over-trading, there is no doubt that it will be healthy and remunerative.

The abundant harvest of 1855 has already had its effect upon business generally. It is conceded throughout the South and West that the grain crop of the year will be the largest ever produced in the country; and the prices prevailing give assurance that the grain grown will be most liberally compensated. The surplus of wheat alone beyond domestic consumption is estimated, from reliable data, at seventy-five millions of bushels. Two thirds of this will probably be required for foreign export, leaving about twenty-five millions for a stock to hold over till 1856.

The business of the Western States, more especially Ohio, Indiana, Illinois, and Wisconsin, cannot be profitably carried on without a largely-increased bank circulation. As supply always follows a demand, we anticipate a rapid extension of the banking business throughout the West. Capital will flow to those States while it can be shown that it can be more profitably employed there than with us. There is a gradual flow of capital to the West, where it yields a better rate of interest than at the East.

We learn from the Philadelphia *Inquirer* that more activity prevails among the iron manufacturers of Pennsylvania, and that manufacturers in that State are likely to have for some time, fall and remunerating prices. They richly deserve it; for the great depression for the last year, the enormous rates of money, the high cost of labor, and all agricultural products, had nearly brought them to a stoppage.

The advices by the last steamer quote iron, delivered on board ship in Wales, at £7 15s., and advancing, and all the mills full of orders for some time to come.

There are few rails to be had in the New-York market, and no contract can be made for immediate delivery. The advance of Iron has been caused by orders from the Continent, from India and Australia, as well as from this country, and it is satisfactory to know that all the new transactions which occur in the iron districts, are the result of a legitimate demand, and that no speculation whatever exists.

Intelligence from London shows firmness in the English securities. The fluctuations in consols for the month of July were less than 1 per cent. Money in London is worth only 3 a 3½ per cent on first-class paper, and the bankers pay only 2 per cent on deposits. Of the new French loan the London Times says:

"The large amount withdrawn in the shape of deposits on the French loan, and which is estimated at nearly £2,000,000, created a perceptible advance in the value of mency out of doors to-day, and an unfounded report was generally circulated late in the afternoon that the discount houses had notified an increase in their rate of allowance for deposits at call.

houses had notified an increase in their rate of allowance for deposits at call.

"The statement that the applications for the French loan have amounted in the aggregate to about £114,000,000, of which between £9,000,000 and £10,000,000 are from subscribers below 50f, rente, not liable to reduction, being in harmony with the anticipation that the larger applicants will not receive more than one sixth of what they have asked for, caused a further advance in the price of the scrip to-day, and the final quotation was 2½ to 3 premium. It is expected that to-morrow the precise particulars will be made known."

Of the same loan the London Daily News adds:

"The scrip of the new French loan was again in demand to-day, and closed at 2% to 3 premium. According to the official announcement in the Moniteur, the aggregate subscriptions for the 250,000,000 loan have amounted to no less than £141,000,000 sterling, (calculating the exchange at 25½ to the pound,) of which the foreign, that is, other than French subscriptions, alone are £24,000,000. The subscriptions for fof rente and under, in respect of which no reduction is to be made, amount to between £9,200,000 and £9,400,000, or nearly a third of the entire amount required. The remaining amount of say £20,600,000, has therefore to be allotted among subscribers to the extent of £134,400,000. In this ratio, a party who has applied for £6500 of the new loan would have only £1000 allotted to him. Probably, when the allotment is made, it will be found that subscribers will obtain little more than one seventh of the amount applied for, always providing that French and foreign applications are placed on an equal footing."

In reference to American securities a correspondent at Frankfort, O. M., July 26th, says: The tendency in our market is still improving under the influence of the favorable news from New-York. A short time ago holders of American bonds were willing to sell at a heavy loss and reinvest their capital in European shares and bonds. They do not feel inclined at present to realize at high rates, and large investments are made by others. United States 6s have been in great demand at 111½, St. Louis City, S2. Seven per Cents Milwaukee City at 89. Ten per Cents San Francisco, payable at New-York, 99½. Eric first mortgage, 105. Eric sinking fund, 85. Illinois construction, S2; and free-land, with privilege, at 83. Galveston, Houston, and Henderson Ten per Cents also in demand at 5%, and the whole amount consigned to our bankers has been taken. North Cross are wanted, also Ohio and Ponnsylvania first mortgages, Chicago and Mississippi first

morigages, Galena and Chicago first morizages. New-Albany and Salem are offered without meeting sales. Exchanges: Anasterdam short sight, 98%; Bremen, 95%; Hamburgh, 87%; Paris, 98%; London, 116%; Berlin, 105%; Cologne, 105%.

The closing quotations of the French three per cents on the Paris Bourse, July 16, were 65f. Soc. for money, and 66f. 5c. for the account, showing no alteration except a slight increase in the pressure of stock for realization, and, on the other hand, a disposition towards speculative purchases.

The terms of the new French loan of £30,000,000, published to-day, are nearly identical with those of the loan for £20,000,000, contracted at the commencement of the year. The subscriptions, as in that case, are to be in four and a half per cents, or in three per cents, at the option of the lenders. The four and a half per cents, which, in the former loan, were issued at a net price of \$90.7c., are now to be issued at \$90.46c.; and the three per cents, which were then fixed at 630.15c., are to be at 630.27c.

The average margin of profit compared with the existing quotations on the Bourse is rather smaller on the present occasion, as it is a little below 3 per cent, while it then amounted to nearly 3% per cent, the avidity of the public to subscribe even for a larger sum on less favorable conditions being reasonably relied upon from the extent to which the applications for the previous loan exceeded the total required. The period of nearly twenty months allowed for the completion of the instalments is a favorable feature, as it seems to indicate confidence that the resources of the government may be sufficient during that time.

It is understood that Messes, Rothschill will open a list in London for the new French loan. Messes, Barings have not yet influented their fraction.

The quotation of the French rate of exchange is rather firmer to-day, and it would therefore appear that it is not anticipated that any large portion of the loan will be taken in England. The fact, however, of subscribers for 50f, rente and under being the only privileged parties this time, instead of those of 200f, as before, may induce applications which would otherwise be withheld, from the little prospect of their being successful.—English Money Market.

We learn from Cincinnati that the banking firm of Mosrs. Smoot, Collord & Hughes resumed payment in May; having within a few months previous cancelled over a million of dollars of liabilities. They are now enabled, with an ample cash capital, and large individual property, to resume business with the perfect confidence of the community. Of this firm the Cincinnati Gazette says:

"This house maintained a firm and high position throughout the financial pressure, and they are now about to make good the various statements furnished from time to time, with reference to their solvency, by which their er allows were as used that every dollar of indebtodness would be paid with interest. It is only to be recent: I that the latter were not in all cases able to hold over but this was one of the news any consequences of the financial pressure.

over, but this was one of the news ary consequences of the financial pressure.

"The managers of the Breck have reason to congratulate thems ives on the successful manner in which they have carried their business through, especially as a recumption on such a basis as is announced is an exception, and a single execution, we believe, so far as regards the private banks, that went down in the United States during the \*erisis' that forced the Citizens' Bank into a suspension."

#### DEATHS.

At New-Orderns, Saturday, August 11th, Samuel J. Peters, Esq., aged fifty-four years, President of the Louisiana State Bank, and long an eminent merchant of that city.

At STAMFORD, Conn., August 22, Daniel Ebbers, in the 70th year of his age, late Cashier of the Union Bank, New-York City.

## Statistical Register.

Vol. V. New Series. OCTOBER, 1855.

No. IV

#### STATISTICS OF THE UNITED STATES.

There is a theory of statistical science, which, reduced to practice, seeks to communicate the knowledge of facts by piling up pyramids of figures, and extending before the eye of the inquirer vast plains of space filled with columns and tables, and duly garnished with footings and headings, recapitulations, totals, and the like technicalities; reminding us of a Dutch garden, laid off by alleys, lines, and walks, into innumerable little square beds, of which each one is an exact type of all the others. Amidst such wildernesses of detail, Truth, the goddess of the grove, wanders silent and perplexed, like the benighted traveller drawn hither and thither by a multiplicity of paths, and distracted by flitting gleams of light, which serve only to deflect his footsteps from the broad highway that would conduct him to the end of his journey.

Upon such a principle appear to be compiled, too often, those elaborate works in which the results of our own, and the censuses of other countries are buried and concealed from public view, rather than made tributary to the stock of general information. In these compilations, the great facts which alone impress the popular mind are drowned in a flood of minutiæ; the reader losing himself amidst the profusion injudiciously spread around him, and as much unable to distinguish one of the millions of little facts challenging his attention from any one of its fellows as he would be to identify a grain of sand upon the shore of the sea.

17

We have before us a volume upon the Census of 1850, peculiarly exempt from these objections. The character of the book is shown in the somewhat elaborate title, which we copy:

"Statistical View of the United States; embracing its Territory, Population—White, Free Colored, and Slave—Moral and Social Condition, Industry, Property, and Revenue; the detailed Statistics of Cities, Towns, and Counties; being a Compendium of the Seventh Census; to which are added the Results of every Previous Census, beginning with 1790, in Comparative Tables, with Explanatory and Illustrative Notes, based upon the Schedules and other Official Sources of Information. By J. D. B. DE Bow, Superintendent of the United States Census. Washington: 1854."

This Compendium was prepared under a resolution of the Senate, passed July 12th, 1854, and was communicated to Congress in the form of a report, through the Secretary of the Interior, in the course of the ensuing session. The demand for a work of this kind arose in a general complaint that the great volume on the census issued the year before, and which was designed to include all the information that had been extracted from the returns by the laborious examinations of the three previous years, was inaccessible to the mass of the people. That volume was, we believe, prepared with care and fidelity, and the facts supplied by it were presented in a more convenient form than had been customary; but it was too large and cumbrous for general use, and an abridgment was called for. The Compendium contains four hundred octavo pages, and embraces not only the entire substance of the materials to be found in the larger and more pretentious work, but many additional statements pertinent to the general subject, and illustrative of the returns, though not directly derived from them. Its plan seems to be modelled upon those popular abstracts and condensed reports of results issued from the Census Office by the former Superintendent, Mr. Kennedy, during the years 1851 and 1852. We bestow no unmerited commendation upon the book in saying that it is incomparably the best collection of American statistics that has yet appeared, and that it is worthy of all the time, labor, and money expended in preparing it. It is, indeed, not an extravagant eulogy to pronounce it, all things considered, one of the clearest and most satisfactory expositions of national progress and resources ever published in any country. As we have before intimated, we regard the absence of minute detail its chief merit. Sir Walter Scott said he was obliged to extend his Life of Napoleon to three large volumes because he had not time to condense it into one. The work of selection and rejection requires time, and is the most laborious duty of the statistician. The present volume, therefore, deserves the palm of superiority not only over our own previous publications on the subjects to which it relates, but also over those voluminous works in which are recorded the censuses of Great Britain, France, and Prussia; and we doubt not will form a precedent which at subsequent periods will be followed by the governments of those countries.

The system of periodical enumerations, as a basis for taxation and representation, provided for in our Constitution, was an experiment scarcely less bold and decisive than the general form of popular government defined in that instrument. It was then a new thing; nor is it yet a familiar and common feature in the policy of civilized states. Previously to our first census of 1790, no regular and official enumerations of the inhabitants had been taken in any country of Europe or America. The example had been set two centuries before in a few of the large free cities of Germany and Italy, but the practice had not been persevered in even within such confined limits. In 1801 the first general census of Great Britain was taken. From 1802 to 1806 Napoleon had numerous agents employed in a very thorough statistical survey of France, embracing population, industry, and most of the prominent interests and social relations of the people. The results of this important work were not published. Since that period the census has become a common expedient of state policy. But to the United States belongs the credit of demonstrating the practicability of the measure. The experiment was a peculiarly hazardous one from the circumstances under which it was tried. Our Union was scarcely formed; the people were afraid of the new government, dreading the extent of its powers as an agent for controlling the States. The census had been expressly provided as a preliminary to taxation. Would the people submit to the invasion of their domicils by the avowed precursor of the assessor and the tax-gatherer? Would they answer truly the interrogatories of the official inquisitors, or answer at all? But, assuming popular acquiescence in the proceeding, would the States in their corporate capacities encourage or tolerate an investigation to be carried on among their citizens by the agents of any other authority than their own, when that investigation was to determine their relative rank and power in the Union? These were questions to which the wisest and most patriotic returned but hesitating answers. The history of the old Confederation certainly warranted no favorable response. The people were poor, they had been worried by continental imposts, and the country was deeply in The Continental Congress, that glorious assembly which sprang full-formed from the Revolution—which had declared its independence, raised and maintained armies, carried that country through an eight years' war, and preserved the form of national government through five no less trying years of peace, had been unable to enforce its requisitions upon the States, or to collect taxes from the people.

In such a state of public affairs the framers of the Constitution must have regarded the first census as a test of the powers of the government they had instituted. The test was made, and the experiment was successful.

Our own census system is more remarkable than any other, in that all the formula for the collection of information are made applicable to every local district throughout an extent of 3,000,000 square miles of territory. The British system embraces a much wider range

1

of inquiry, employs a vastly greater number of agents, ar is conducted with surprising celerity. The last census of Great B tain was taken in one day, employing 38,740 persons as enumerators. Through the perfection of the machinery employed it was for nd practicable to sift and digest the 39,000 returns, and publish a complete statement of the population and the number of houses within ten weeks after the work commenced. A rough statement of cur population was given on the 1st December, 1850, six months after the labors of the marshals commenced. One year later an all stract of the social statistics, and a summary account of manufacturing industry and agricultural production were communicated to Congress, and published. Four large quarto volumes of results of the British census have already been published by the Registrar-General, and there remains material sufficient probably to fill as many more, visich are in preparation.

What may be called the field-work of our census began on the 1st of June, 1850. Forty-five marshals, and 3231 assistant-marshals were engaged in the enumeration of the inhabitants and the collection of statistics. The cost of the work, exclusive of printing, paper, and binding, has been \$1,362,500. The publication expenses in 1840 amounted to \$184,629. Those of the census of 1850 may be estimated at \$250,000, which, added to the other expenditures, will make a total of \$1.612,500, or 6 95-100 cents per head of the population. The subjoined table exhibits the actual and comparative cost of each national census:

Total Expenditure. Cost per Head, Cost per Square Mile. 1790, ..... \$44,377 28 \$1 13 cts. 9.6 1 25 1800,..... 66,109 94 11.3 1810, ..... 178,444 67 2 46 22.22 16 1820, . . . . . . . . . . 208,525 99 23.02 94 39.21840,..... 833,370 95 4 88 77.8 1850,.....1,362,500 00 5 87 59.4

The cost of printing and publishing must be added to the items above given for 1850.

In the earlier reports on the census the area of the United States was stated to be 3,230,572 square miles. Since the dates of those documents, a computation has been made by the Topographical Bureau, which reduces the estimates considerably, and gives the superficial area of the Union as 2,936,160 square miles. This estimate, like the former, is only an approximation to the truth, though as proceeding from a respectable scientific authority, it is probably nearer perfect correctness than the larger statement. The following table, representing the areas of North and South-America, with their principal territorial divisions, contains information which we have often occasion for, and seldom find in so condensed and well-arranged a form.

## Area of North-America, exclusive of the West-Indies.

| Territory.                                     | Square Miles. Sq. Miles.                   |

| 91,406   | 6,810,184                                  |

The progress of "our manifest destiny" in the appropriation of adjoining territories, is shown in the following table.

Additions of Territory to the United States during a period of Sixtyseven Years:

| Territory.   | Sq. miles. |
|--|------------|
| Area of the United States at the peace of 1788,                                  | . 820,680  |
| The purchase of Louisiana added, (about,)  | . 899,579  |
| (The limits were indefinite; those here assumed are the boundaries of the treaty | of         |
| 1819, with the exception of Florida and parts of Mississippi and Alabama.)       |            |
| The acquisition of Florida, (treaty of 1819,) added                              | . 66,900   |
| Admission of Texas, (Emory's map of 1844,)                                       |            |
| Oregon Treaty  |            |
| Treaty with Mexico,  | . 522,955  |
| Total,   | 2,936,166  |

The territorial extent of the republic is, therefore, nearly ten times as large as that of Great Britain and France combined; three times as large as the whole of France, Britain, Austria, Prussia, Spain, Portugal, Belgium, Holland, and Denmark, together; one and a half times as large as the Russian empire in Europe; one sixth less only than the area covered by the fifty-nine or sixty empires, states, and republics of Europe; of equal extent with the Roman empire, or that of Alexander, neither of which is said to have exceeded 3,000,000 square miles.

Considered in lesser divisions, the calculations of the Topographical Bureau show the existence of an interior valley drained by the waters of the Mississippi and tributaries, nearly as large as the slopes of the Pacific and Atlantic proper together, and one third larger than the whole domain of the republic upon the adoption of the present Constitution, 1789.

The shore-line of the United States, according to a calculation made at the office of the Coast Survey in 1853, is 12,609 statute miles in length. If the line of coast be followed by the heads of bays and up the mouths of rivers to the heads of tide-water, the total length of shore-line will be increased to 33,069 miles. The Atlantic coast-line measures 6861 miles, the Pacific, 2281, that of the Mexican gulf 3467.

In this portion of the work there is a good deal of statistical "bosh" which has no sort of connection with our census nor any census, which must have cost a large amount of labor, which few will read, and no body who reads will remember, relative to the areas of all the basins in the world, the length and windings of rivers, the depths of sounds, the direction of currents, etc., etc. So far as concerns any statistical or other useful purpose within the design of the work the basins might as well be turned upside down and shed their waters in immeasurable cataracts upon other planets, the rivers run up hill, and the sounds be drained as dry as the palms of the compiler's hand. These statements increase the bulk without adding to the value of the volume.

As Jupiter sometimes nods, so it appears that the Topographical Bureau occasionally disagrees with itself; but as the following computation of areas was issued from that office so late as June 7th, 1854, its claims to authenticity are equal to those of any other statement on the same subject, and we lay it before our readers, presuming that it will be use to some, and gratify the rational curiosity of others.

| Middle States,                | 114,624            | 8.90                          | North of latitude 86° 30′, 1,970,077 | 67.10                         |
| Southern States,              | 253,709            | 8.81                          | South of latitude 36° 80', 966,689   | 82.90                         |
| South-western States,         | 474.435            | 16.15                         | W. of the Rocky Mountains, 870,209   | 29. <b>64</b>                 |
| North-western States,         | 395,31 <b>9</b>    | <b>1</b> 3. <b>46</b>         | E. of the Rocky Mountains, 2,065,957 | 70.36                         |

The States and the territories have, at the present time, about an equal area. The slaveholding States have 851,508 square miles, and the non-slaveholding States, 612,597. There are 865,576 square miles east of the Mississippi, 2,070,590 west, 1,200,381 intermediate

between the Mississippi and the Rocky Mountains, and 870,209 west of the Rocky Mountains. North of the old Missouri compromise line, there is an area of 1,970,077 square miles, and 966,089 south of it.

The subject of colonial population has not elicited much inquiry until of late years. No data remain supplying the means of a very close estimate; but the following table contains the best resumé of the facts on record which we remember to have met with:

## Colonial Population.

| Colonies.          | Colonial Population.   |              |                        |  |
|--------------------|------------------------|--------------|------------------------|--|
|                    | 1701.                  | 1749.        | 1775.                  |  |
| Connecticut,       | 30,000                 | 100,000      | 262,000                |  |

| South-Carolina,    | 7,000                  | 30,000       | 93,000                 |  |
| Virginia,          | 40,000                 | 85,000       | 300,000                |  |
| Whites,            |                        | ••••         | 2,303,000              |  |
| Slaves, estimated, | ••••                   | ••••         | 500,000                |  |
| All classes,       | 262,000                | 1,046,000    | 2,803,000              |  |

At the beginning of the revolution, the Southern colonies had therefore 812,000 white inhabitants, and the Northern, 1,491,000. Connecticut was the fourth State in rank. Massachusetts and Pennsylvania were each a third larger than New-York, which was even excelled by Connecticut.

The present population, and its progress since 1790 are shown in the following statement:

## Population of the United States.

There have been seven enumerations of the inhabitants of the United States, the periods and aggregate results of which are as follows:

|       |      |       | Number.    |
|-------|------|-------|------------|
| Censu | s of | 1790, | 3,929,827  |
| 44    | "    | 1800, | 5,305,925  |
|       |      | 1810, |            |
| 44    | "    | 1820, | 9,638,131  |
| u     | "    | 1830, | 12,866,020 |
| 44    | 44   | 1840, | 17,069,453 |
| 44    | •    | 1850  |            |

At the close of 1854 the total population of the United States, upon the supposition that its average ratio of increase has been maintained, or nearly so, may be stated in round numbers at 26,500,000.

The density of population is a subject beginning to attract no little attention. In 1850, Massachusetts had 127.50 inhabitants to the square mile; Rhode-Island, 112.97; Connecticut, 79.33; Vermont, 30.76; Maine, 18.36; and New-Hampshire, 34.26. The general density of population in New-England was 41.94 persons to the square mile. Of the Middle States, New-York had 65.90 to the square mile; New-Jersey, 58.84; Pennsylvania, 50.26. The Middle States generally had 57.79. Of the Southern States, Maryland is first in population compared with territory. She had 52.41 to the square mile; Kentucky, 26.07; Virginia, 23.17; Tennessee, 21.99. The total density of this division was 15.27. The South-western States have 7.09 to the square mile; the North-western, 16.13. The free States have 21.91 inhabitants to the square mile; the slave-holding, 11.35.

The density of population determines in a great measure the probable future rate of increase. Thus, granting the equal capacity of the Southern States to support population, they are likely to gain very rapidly upon the future ratio of advancement in the free States, until they have doubled in population. In this view, the following comparative exhibit of population is highly interesting:

## Population and Density of Geographical and other Divisions.

| Divisions.                  | Populat n.       | Dens. | Divisions.               | Populat'n. | Done. |
|-----------------------------|------------------|-------|--------------------------|------------|-------|
| The States, exclusively of  |                  |       | Southern States,         | 8,952,537  | 15.97 |
| Territories,                | 23,099,573       | 15.77 | South-western States,    | 8,321,117  | 7.00  |
| The States, exclusively of  |                  |       | North-western States,    | 6,379,928  | 16,18 |
| Texas and California        | 22,794,859       | 21.29 | North of 36   30',       | 18,626,995 | 6.91  |
| Texas and California,       | 805,159          | .77   | Bouth of 86° 30',        | 9,564,551  | 9.90  |
| The Territories,            | <b>. 9</b> 2,293 | .06   | East of the Mississippi, | 21,393,954 | 24.71 |
| The Non-slaveholding States | 18,434,922       | 21.91 | West of the Mississippi, | 1,797,923  | .87   |
| The Slaveholding States,    | 9,664,656        | 11.85 | Pacific Slope            | . 117,274  | .15   |
| New-England States,         | 2,728,116        | 41.94 | Mississippi Slope        | 6,641,754  | 6.98  |
| Middle States,              | . 1,624,953      | 57.79 | Atlantic Slope,          | 12,729,859 | 19.98 |

The Middle States are therefore the densest portion of the Union, owing, in some degree, to the very large cities existing there. The New-England States come next in order; then the North-west; then the South; and lastly the South-west. The non-slaveholding States are twice as dense as the slaveholding States. The States, taken together, have a density of about sixteen to the square mile. Excluding Texas and California, their density is over twenty-one to the square mile. The territories have one inhabitant only to every sixteen square miles. Texas and California together have less than one to a square mile. Whilst nearly twenty-five persons inhabit a square mile in the region east of the Mississippi, and nearly twenty persons in the Atlantic slope, in the Mississippi valley there are only about seven persons to the square mile; west of the Mississippi, less than one person to the square mile; on the Pacific slope, one person to every six square miles! With the density of the Mississippi valley, the United States would have had but 21,000,000 inhabitants; with

the density of the Southern States, the number would be nearly 45,000,000; with the density of New-England, 123,000,000; and with the density of the Middle States, 170,000,000.

The subjoined condensed statement of the population and areas of other countries presents facts of the greatest use in forming an estimate of the progress of the United States:

Exhibiting the Population and Number of Inhabitants to the Square
Mile of various American and European Countries.

| Countries.                 | Populatn.          | Dons.  | Countries.         | Populat'n.        | Dens.         |

| Russia in Europe,          | 60,815,850         | 28.44  | Holland,           | <b>8,26</b> 7,638 | 259.81        |
| Austria,                   | 86,514,466         | 141.88 | Denmark,           | <b>2</b> ,296,597 | 101.92        |
| France,                    | <b>85,</b> 788,170 | 172.74 | Switzerland,       | 2,892,740         | 160.05        |
| England,                   | 16,921,888         | 882.00 | Greece,            |                   | <b>55.7</b> 0 |
| Great Britain and Ireland, | 27,475,271         | 225,19 |                    | -                 |               |

In population, therefore, the United States, in 1850, was only exceeded by four of the European powers, namely, Russia, Austria, France, and the British Empire in Europe. It is nearly or quite twice as populous as either Prussia, Spain, Turkey, the whole of the German States, the whole of the Italian States, including Greece and the Swiss republics, and excluding Naples and Sicily. It is nearly three times as large as the kingdoms of Sweden, Belgium, and Portugal combined, and is equal to the aggregate population of twenty-four out of the thirty-seven States into which McCulloch divides Europe. Exclusively of Ireland, it exceeds that of Great Britain by a population nearly equal to that of the State of Pennsylvania. In comparing with the individual States, Portugal and the Netherlands find their counterpart in New-York; Sweden and Switzerland in Pennsylvania; and Norway and Denmark in Virginia.

The number of white persons in the United States on the 1st June, 1850, was 19,553,068, of whom 17,312,583 were native, and 2,240,535 foreign-born.

The increase of the whites in sixty years was as follows:

## Increase of the Whites.

|                                 | 1800. | 1810. | 1820. | 1830. | 1840. | 1850. |
|---------------------------------|-------|-------|-------|-------|-------|-------|
| Present slaveholding States,    | 33.94 | 29.70 | 28.2  | 29.35 | 26.54 | 34.26 |
| Present non-slaveholding States |       |       |       |       |       |       |

Massachusetts, which was the first State in white population in 1790, has now become the fourth, exactly reversing the course of New-York, which has become first from the fourth rank. Virginia has descended from the second to the sixth; South-Carolina from the tenth to the twenty-third; whilst Ohio, which in 1800 was the seven-

teenth, has become the third; and Indiana, which in 1810 was the nineteenth, has become the fifth in rank; Pennsylvania has changed least of any of the States, being always of first, second, or third rank.

As to sex, there were in the United States, in 1850, 10,026,402 white males, and 9,526,666 white females. Of these, 8,786,968 males and 8,525,565 females were natives of the country, and 1,239,434 males and 1,001,101 females were of foreign birth. It thus appears that in the aggregate the males outnumbered the females 499,736. The excess of native males over native females was 261,403; and of foreign-born males over females 238,333. The discrepancy in the number of males and females is much greater among the population of foreign than of native birth. According to the ratio of native males to females, the excess of foreign-born males to females should be only 35,000. And if the ratio ascertained to exist between males and females of the foreign population prevailed among native inhabitants, there would be in the country 1,666,000 more males than females.

But a considerable disparity between the number of males and females has always existed since the records of our population began. As to the white population, the excess has been at the different decennial periods as follows:

|       | Ercess of White Males. | Ratio of<br>Females to Males. |
|-------|------------------------|-------------------------------|
| 1790, | 58,786                 | 96.4 to 100                   |
| 1800, |                        | 95.3 " 100                    |
| 1810, | 113,138                | 96.2 " 100                    |
| 1820, | 128,329                | 96.8 " 100                    |
| 1830, |                        | 96.4 " 100                    |
| 1840, |                        | 95.6 " 100                    |
| 1850, |                        | 95.0 " 100                    |

In the respective geographical divisions, it is found that New-England has now a small excess of females over males; but at times has had a surprisingly large number of the unprovided spinster class; in the Middle States the males have always considerably predominated; the Southern States approach somewhat nearer to an equality of the sexes; in the North-western and South-western States, the disproportion is very great, the supply of females to males having been at one period below the demand in the ratio of 89.71 to 100 in the former section, and in the latter in the proportion of 90.13 to 100; but in the territories a most lamentable destitution prevails in this respect, there being but 36.73 females to 100 males in those portions of the country at the date of the last census.

In California there was but one woman to twelve men. Wisconsin had 24,000 more males than females in a population of a little over 300,000. The surplusage of the ruder sex was 45,000 in Illinois, 36,000 in Indiana, 10,000 in Iowa, 33,000 in Missouri, 27,000 in Louisiana, 24,000 in Kentucky, 12,000 in Alabama, 11,000 in Georgia, 1000 in South-Carolina, 8000 in Virginia, 5000 in Maryland, 41,000 in New-York, 27,000 in Pennsylvania, and 54,000 in Ohio. This deficiency of the gentler and better part of mankind is, however, com-

pensated to some extent by a superfluity in other States, as follows: Massachusetts, 17,000; Connecticut, 4000; New-Hampshire, 6000; Rhode-Island, 3000; and North-Carolina, 7000.

Doubtless immigration has a sensible influence upon the preponderance of males over females; in truth, it appears probable that the general excess of males in the country at all periods since 1790 is attributable to that cause alone; and the preponderance of females in New-England and in some other States is traceable to the emigration of the other sex to the West.

#### Ages of the Population.

In 1850, 537,661 white persons in the United States were under one year of age, and 2,358,797 one and under five; 7,234,973 were in youth, or between 5 and 20; 7,633,288 were in maturity, or between 20 and 50; 1,777,255 were between 50 and 100, (73,798 were between 80 and 100,) and 787 were in extreme old age, or 100 and over. In the dependent class under 15 there were 8,002,715; in the producing class between 15 and 60 there were 10,720,175; in the supported class above 60 there were 819,871; of the males between 15 and 60, or those capable in emergency of bearing arms, the number was 5,542,785; the latest enrollments of militia, as reported by the War Department, giving only 2,006,456. On a computation. there were 4,684,883 white males of 21 years of age and upwards. The ages of the native and foreign-born population have not been distinguished in the classifications made in the office, although a very important distinction; nor can the number of naturalized foreigners be known from the returns. It is therefore impossible to ascertain the number of persons entitled to the right of suffrage. Still, however, some estimate may be made. Supposing the foreign-born males of 21 and over to be 60 per cent of the whole foreign-born males, (the per cent for the native and foreign being 47,) and supposing that half of the foreign-born males over 21 are capable of voting somewhere, (these suppositions have reference to the ages of foreigners who arrive, and to the fact that they vote at early periods in the new States,) the number of such voters would be 371,839; and the number of male foreigners over 21 not capable of voting would also be 371,839. Deduct these from the whole males over 21, and the number of persons actually capable of enjoying the elective franchise would be 4,313,044, giving to every free native citizen that right. The foreign vote, therefore (including those who have come into the country from the earliest times,) would be but one twelfth of the

The following table gives the number of white persons at each specific period of life, and the proportion of each class to the whole white population. It will be seen that the age of nineteen nearly divides the whites into two parts—that nearly two fifths of the whole are between the ages of twenty and fifty, and less than one tenth over fifty; whilst more than one half are under twenty years of age.

## Ages, and Ratio to the White Population.

| Ages.                          | Number.     | Ratio per cent to Total. |
|--------------------------------|-------------|--------------------------|
| Under one year of age,         | 537,661     | 2.750                    |
| One and under five,            | 2,358,797 · | 12.064                   |
| Five and under twenty,         |             | <b>37.002</b>            |
| Twenty and under fifty,        |             | <b>39</b> .03 <b>9</b>   |
| Fifty and under eighty,        | 1,703,457   | 8.712                    |
| Eighty and under one hundred,  | 73,798      | .377                     |
| One hundred and over,          | 787         | .004                     |
| Unknown,                       | 10,307      | .053                     |
| Total,                         | 19,553,068  |                          |
| Males twenty-one and over,     | 4,684,883   | 23.96                    |
| Males fifteen and under sixty, |             | 28.35                    |

The following table is interesting as showing the distribution of the sexes through the various ages noticed in the census.

It will be perceived that for 1800, 1810, and 1820, the white females under ten are fewer than the males, but have been gaining upon them in proportion. This is also the case between ten and sixteen, and between twenty-six and forty-five. Above forty-five, though the females are less, the ratios are more uniform. Between sixteen and twenty-six the females are more numerous than the males, and increase their advantage. For 1830 and 1840, the females under five, between five and ten, and ten and fifteen, are less than the males, though gaining upon them. Between twenty and seventy the males are still in excess, and gain upon the females. Between fifteen and twenty there is a large and growing excess of females, attributable in some slight degree, as Prof. Tucker intimates, to the anxiety of the sex to retain this interesting age. At all periods over seventy the females preponderate with only two exceptions.

| Year. | Age.                     | Males.                  | Females.                | Total.            |
|-------|--------------------------|-------------------------|-------------------------|-------------------|
| 1830, | under 10                 | 1,755,055               | 1,672,675               | 3,427,730         |
| 1840, | 10 and 20                | 1,635,521               | 1,628,756               | 3,264,277         |
| 1850, | 20 and 30                | 1,869,092               | 1,758,469               | 3,627,561         |
| 1830, | 10 and 20                | 1,242,930               | 1,235,110               | 2,478,040         |
| 1840, | 20 and 30                | 1,322,440               | 1,253,395               | 2,575,835         |
| 1850, | 30 and 40                | 1,288,682               | 1,128,257               | <b>2,416,9</b> 39 |

| 1850, | 50 and 60                | 498,660                 | 459,511                 | 958,171           |

Table XXX., on pages 52 and 53, showing the ages of the white population in each of the States, contains a great amount of useful information in a condensed form, and may be studied to advantage by all interested in longevity, the chances of life in the several sections of the Union, the laws of mortality and survivorship, and correlative

subjects. We regret that the length of these tables precludes their insertion.

The following table contains a convenient summary of the principal facts appertaining to this subject, including as well the free colored and slave as the white population.

## Ages of the Whole Population.

|     | Age    |          | Number.       | Ratio.                | Age.                     | Number.    | Ratio. |
|-----|--------|----------|---------------|-----------------------|--------------------------|------------|--------|
| Und | er 1 y | car old, | 629,446       | 2.71                  | 50 and under 80,         | 1,976,700  | 8.52   |
| 1 a | nd un  | der 5,   | 2,868,327     | 12.37                 | <b>60</b> " <b>100</b> , | 89,077     | .89    |
| 5   | 66     | 20,      | 8,661,689     | 87.85                 | 100 and over,            | 2,555      | .01    |
| 20  | 44     | 50,      | 8,949,797     | <b>8</b> S. <b>59</b> | Age unknown,             |            | .06    |
|     |        | A        | ggregate popu | ilation               |                          | 28,191,876 | 100.00 |

Whilst the slaves have much more than their ratio of the dependent class of fifteen and under, and more than their proportion of the whole supported class, including those below fifteen and above sixty, their ratio of the effective class is less than that either of the whites or free colored. The presumption here is, that those in the several conditions under fifteen who are industrially engaged are about equal. The proportion is no doubt much larger among the slaves. The proportion of free colored above sixty is greater than that of the whites, or slaves, or total.

## DEAF, DUMB, BLIND, INSANE, AND IDIOTIC.

Much greater care was taken in the collection and compiling of statistical information on the social condition of the people in 1850 than at any previous census; so that we cannot always refer with confidence to the results of former enumerations for the purposes of comparison with those of the last. If the returns of 1830 and 1840 in respect to deaf, dumb, blind, insane, and idiotic be received as reliable and correct, we are forced to admit that those maladies are increasing in the country with deplorable rapidity, and very much faster than the means of relief. The number of persons thus afflicted at various periods is shown below.

Deaf and Dumb, Blind, Insane, and Idiotic White Persons in the United States in 1830, 1840, and 1850.

| Deay  | and I | Dumb. |       | Blind, |       | Insane &<br>Idiotic. | Insano. | Idiotio. | Total Insance and Idiotic. | Aggregate Deaf and Dum and Blind. | <i>b</i> , |
|-------|-------|-------|-------|--------|-------|----------------------|---------|----------|----------------------------|-----------------------------------|------------|
| 1830. | 1840. | 1850. | 1880. | 1840.  | 1850. | 1840.                | 1850.   | 1850.    | 1850.                      | 1880, 1840, 18                    | 50.        |
| 5,863 | 6.684 | 9.186 | 8.974 | 5.024  | 7.978 | 14.641               | 14.972  | 14,257   | 29,229                     | 9,387 11,708 17,1                 | 114        |

The very great apparent increase of insane and idiotic since 1840, almost exactly doubling in ten years, leads us to suspect material errors in the returns under this head at one period or the other. It is a suggestion worthy of investigation, that the immense foreign im

migration of recent years is a leading cause of the admittedly great increase of these classes of inhabitants.

## MIGRATIONS FROM STATE TO STATE.

## Nativities of White Population.

The migratory habits of our people have long been a topic of remark and reproach with foreign writers upon the United States. The propensity of our citizens to desert the homes of their childhood, to sell their patrimonies, and to sunder the hallowed associations which belong to the ancestral hearth, has been made the theme of eloquent denunciation by grave historians like Alison, and of sentimental regret by tourists like Fidler, Trollope, and Dickens. This habit is not, as has been assumed, a grave feature in our national character,

nor is it at all discreditable to our countrymen. Younger sons and unprovided sisters in the old States move westward, not because they are destitute of reverential feelings for the old homesteads, but because the abundance and cheapness of land in the new States enable them to establish homes for themselves and their children, and thus to an honorable desire of independence; and if they are often ready to sell their "new improvements," and keep in the van of the march of settlement, that circumstance is a proof rather of their courage and enterprise than of a deficiency in the finer feelings of our nature. But to return from this digression and come down to the occasion of it, we refer to a curious table on the preceding page, showing the nativities of the white population, both as to the countries and the particular States of the Union in which their inhabitants were born.

By this table it appears that about one quarter of the native white population have emigrated from the States in which they were born, and settled in other States. The general movement has been from the East to the West, from the North to the South, and from the old States to the new; and the cause of it is obvious. It is familiarly known as the want of more "elbow-room." The following table develops some details of this movement which will interest the reader. It includes white and free colored inhabitants.

Free Persons born in, to those born out of, each Section of the United States.

| Sections.                      | Born and re-<br>siding in. |       | Born in and residing out of. | Ratio<br>per ct. | Total<br>born in. |
|--------------------------------|----------------------------|-------|------------------------------|------------------|-------------------|
| Eastern,                       | 2,367,932                  | 83.91 | 453,891                      | 16.09            | 2,821,823         |
| Middle,                        | 5,155,698                  | 83.85 | 993,198                      | 16.15            | 6,148,896         |
| Southern,                      | 2,266,088                  | 73.10 | 833,775                      | 26.90            | 3,099,863         |
| South-western,                 |                            |       |                              | 10.27            | 1,606,109         |
| North-western and Territories, |                            |       | 98,369                       | 2.42             | 4,060,887         |

Whilst more than one quarter of the free persons born in the Southern States have left those States for other sections, only one sixth have left the Eastern or Middle States, only one tenth the South-western, and only one fortieth the North-western and the territories.

This statement will serve to correct a common misapprehension in reference to the migratory habits of different portions of our people. New-England, it is here shown, is not the hive whose swarms have settled up the Middle States and the great West. In fact, the proportion of her people who reside in their native States is larger than obtains in any other part of the old Confederacy. The old Southern States, from Virginia to Georgia, have sent forth as settlers to other States, and chiefly to the West and South-west, no less than 833,775 persons, constituting nearly twenty-seven per cent of the entire body of resident and non-resident natives of those States. But, though New-England has contributed to the population of other States but about one sixth of her own, it must be remembered that a very large

proportion of her inhabitants are engaged in occupations which require their presence in other parts of the world, and in other States of the Union, while their nominal residence remains in the section of their nativity. The ratio of emigration to their population in the Middle States is almost identically the same as in New-England; but the absolute number of emigrants is more than double, and exceeds by 160,000, or twenty per cent, the number from the Southern States.

To recur to Table No. XL., we find that North-Carolina has a population more purely native to the soil than any other State of the Union, having only 4.36 persons in 100 not born within her limits, and only 4.6 to 1000 born in foreign countries; and of her 20,784 inhabitants born in other States, nearly 18,000 are natives of the four coterminous States. This community therefore presents an example of the nearest approach to a perfectly homogeneous population to be found in the American Union. The character of the population of South-Carolina is nearly the same, having less than eight inhabitants in 100 not born in the State. Virginia is next, and Maine fourth in this respect. Twelve States have a majority of inhabitants born in other States or foreign countries, of which California presents the remarkable instance of a commonwealth of which only one member in twelve is a native citizen. Wisconsin has one native citizen to about three immigrants, and Iowa one to four. These incongruous elements of population are of course a feature incident to all new States, and will disappear in the course of their progress towards maturity.

The migration from the free to the slaveholding States is much larger than the movement from the latter to the former. This is in conformity with what appears to be the direction of all great movements of the race. They are from the east to the west, and from the north to the south. Even when the tide of conquest has proceeded from south to north and from west to east, migration has not followed it. There are now 762,500 persons living in slaveholding States who are natives of non-slaveholding States, and 232,112 living in the free States who were born in the slaveholding States. There are 1,866,397 persons of foreign birth in the free, and 378,205 in the slaveholding States.

## IMMIGRANT POPULATION.

The Compendium of the census which forms the subject of the present analysis was prepared nearly three years after the investigations embodied in the last report from the bureau while under the superintendency of Mr. Kennedy, predecessor of Mr. De Bow; yet we find that the statements of the reports of 1851 and 1852, in respect to immigration and its effects upon population, are confirmed in substance and in all their material details. The following table shows the distribution of this portion of our population in 1850:

Proportion of Native to Foreign-born in different Sections of the United States — White and Free Colored.

| Sections.                     | Total free population—Native, including unknown. | Total foreign population. | Proportion of foreign to a native per ct. |
|-------------------------------|--|---------------------------|---|
| Eastern,                      | 2,421,867  | 306.249                   | 12.65                                     |
| Middle,                       | 5,447,733  | 1,080,674                 | 19.84                                     |
| Southern,                     | 2,342,255  | 43,530                    | 1.86                                      |
| South-western,                | 1,973,531  | 105,335                   | 5.34                                      |
| North-western and Territories | 5,557,529  | 708,860                   | 12.75                                     |

No branch of statistics connected with the census is invested with higher interest at this period than information relating to this subject. A table, prepared in part by Prof. Tucker of Virginia, and completed in the Census Office under the direction of Mr. De Bow, gives the arrivals of immigrants during each year since 1790. It will be so useful for reference that we copy it without abridgment.

## Arrivals of Foreigners in the United States.

| Years.        | Arrivale. | Years.             | Arrivals.                 |
|---------------|-----------|--------------------|---------------------------|
| 1790 to 1800, | 50,000    | 1885-86,           | 62,473                    |
| 1800 to 1810, | 70,000    | 1836-87,           | 78,088                    |
| 1910 to 1920, | 114,000   |                    |                           |
| 1520-21,      | 5,998     |                    | 52,163                    |
| 1821-22,      |           |                    | 84,146                    |
| 1822–28,      | 6,749     |                    |                           |
| 1828-24,      | 7,088     | 1841-42,           | 101,107                   |
| 1924-25,      | 8,532     | 1842-48,           | 75,159                    |

The arrivals of foreigners, as shown by this table, amount to 3,762,000 to the beginning of 1854; and up to 1850, to 2,583,000, which nearly corresponds with the number given in the table inserted in the census report of 1852. Elaborate calculations are entered into, based upon this table, to arrive at a probable estimate of the number of immigrants and their descendants now living in the United States. This is an important inquiry, and one which has been treated by many able pens. The conclusions expressed in the report of 1852, derived from premises nearly the same as those assumed by Mr. De Bow, appear upon the whole to be supported by the best array of argument and illustration.

The table in the report of 1852 cannot well be abbreviated, and is as follows:

| 266              | Statistics of the United States.                        | October,                              |
|------------------|---|---------------------------------------|
| Number of foreig | gners arriving from 1790 to 1810,                       | 120,000                               |
|                  | reckoned in periods of ten years,                       | 47,560                                |
| Number of forcis | gners arriving from 1810 to 1820,                       | 114,000                               |
|                  | ibove to 1820,  | 19,000                                |

The compiler of the Compendium gives his views on this question as follows, (p. 119:)

"Estimating the survivors in 1850 of the foreigners who had arrived in the United States since the census of 1700 upon the principle of the English life-tables, and making the necessary allowance for the less proportion of the old and very young among them, and for reemigration, etc., their number is stated in the abstract of the census published in 1852, (p. 15,) at 2,460,000. From this a deduction is then made of ten per cent, on account of the greater mortality of emigrants, and their lower expectation of life, which brings the actual survivors very nearly to the figures of the census. The deduction of ten per cent seems hardly sufficient, and does not accord with the deductions that are generally made in the reasonings of vital statisticians. It would be safer to assume fifteen per cent than ten, which would reduce the survivors to a little more than 2,000,000. To this add fifty per cent for the living descendants of foreigners who have come into the country since 1790, (observing that nearly four fifths of the number have arrived since 1830, and could not have both children and grand-children born in the country, and mor than half have arrived since 1840, and must have had compara ively few native-horn children, it would not be safe to add any mor; and the number of foreigners and their descendants in 1853 is not likely to exceed 8,000,000 or 3,200,0000."

In further elucidation of the questions involved in these extements, it may be remarked, that one year after the preparation of the table which gave 2,210,000 as the number of foreigners living in the United States in 1850, and 4,304,416 as the total number of inhabitants at that date who had either emigrated hither or had descended from immigrants since 1790, Mr. Meech, who had assisted in its pre-

paration, was directed by the then Superintendent of the Census to test its results by a careful analysis, on the principles of the laws of survivorship, as recognized by the English life-tables. This gentleman, whose ability and experience are well known, states in his

report:

"The formula of 'life-tables' gives 2,460,000 as the number of survivors in 1850. In this calculation, which extends over the space of sixty years, the English life-table has been employed; but, owing to peculiar causes, the mortality of immigrants is greater than the average which prevails in the land to which they migrate, as well as in the land of their birth; of which the migration of our own citizens to California has afforded an example. Besides this, a large share of the immigrants have been Irish, among whom the expectation of life is low in their own land, being, at the age of twenty-five, only 32 years, by the seventeen life-offices tables for Irish life; where, in the English table, (see mortality,) the expectation at that age is 37 years. It is furthermore well known, that within the period of cholera visitations the foreign population experienced the dreadful effects of its ravages to a most frightful extent—a fact illustrating their greater susceptibility to disease. In consideration of these and similar facts, deducting ten per cent from the results of calculation, which all persons of experienced judgment will admit as an allowance favorable to the foreign population, the remainder is 2,214,000 survivors in 1850. The number of foreign-born residents in the United States, according to the seventh census, was 2,210,000 in 1850."

The same gentleman was applied to for another computation to be inserted in the Compendium, and he replied, January 20th, 1854:

"I have lately re-computed the number of survivors of the emigration of 1790 and 1850, with some slight alterations since suggested, but the final number is substantially the same, or upwards of 2,400,000. It may seem too great, but there is certainly no mistake in the calculation; besides the reduction for extra deaths, there are others which would reduce it to the census number, such as returned, etc."

The objections cited from the correspondence of Dr. Jarvis, of Boston, with the Census Office, after the change in the administration of that bureau in March, 1853, against the tables in the reports of 1851-52, are specious but entirely erroneous. He says, in an extract

from his letter, given on page 121 of the Compendium:

"These tables pre-suppose two things which are errors: 1st. That all the immigrants who arrived from 1790 to 1850, were alive in 1850, for they are all included in the sum total. 2d. That all their children who were born and survived to 1810 and to the decimal year next after their arrival, survived to 1850; for these two are included in the total. On this supposition there had been no deaths of foreigners since their arrival in this country through sixty years up to 1850." And again: "The only chance given for a foreigner or his children to die, was between the time of his birth and the next decimal year. If he passed that, he succeeded almost to immortality on earth; at least to a life lasting to the middle of this century."

The tables assume no such thing. They are calculated upon the simple law of natural increase. A suitable proportion of the immigrants are assumed to have died in the course of the sixty years, such a number as the rule of mortality found to be applicable to that class of inhabitants required. The four millions and odd thousands of survivors included only 2,210,000 actual immigrants, the remainder being made up of 2,094,000 children of living and dead immigrants. The table shows that 2,728,000 immigrants had arrived in sixty years, and if only 2,210,000 were living, it is a fair presumption that 518,000 had died within that period. It must be remembered that more than four fifths of the total arrivals had been within the twenty years preceding, the mass of whom were of course alive at the end of the term. When we speak of the "natural increase" of our native stock from four millions in 1790 to twenty-one millions in 1850, we do not mean that the identical individuals who composed the four millions in 1790 were alive in 1850. On the contrary, we know that nearly eleven out of twelve of them are dead, but each of those eleven deceased has, upon the average, five representatives among the living. Nothing can exceed the severity or accuracy of the tests applied by Mr. Meech in the process of ascertaining the survivors of the sixty years' immigration, and he found that, according to formulas used by the life insurance companies, the number should be 2,460,000, that is, 250,000 greater than was shown by the returns of the marshals. An investigation upon the same principles remains to be made to ascertain whether the immigration of 2,728,000 running through the period of sixty years, should have increased at the end of the term by the number of 1,576,000 persons, as the aggregate of 4,304,000 requires. The ratio of increase adopted for immigrants in the formation of the preceding table was, for the ten years within which they arrived, one half that of the native white population, and after that period the same rate as prevailed among the mass of free inhabitants. This rule was entirely fair, because, though the natural increase of this class is retarded by some special causes, it is promoted in a corresponding degree by others. The proportion of child-bearing females among immigrants is much greater than among native inhabitants, and their fecundity is also far greater.

One of the most laborious and able writers upon immigration statistics, of whose investigations we have yet had the benefit, is Dr. Chickering, of Boston, who, in 1848, estimated the number of foreigners and their descendants at 3,943,673, which was about half a million higher for that year than the census statement of 1850. The estimate of Mr. De Bow of 3,000,000 or 3,200,000 for 1853, is fully 2,000,000 too low.

#### FREE COLORED POPULATION.

Having now sufficiently discussed the elements of our white population, the next class which claims attention is the free colored. The total free colored population in 1850 was 434,495, of whom 275,400 were black or of unmixed African descent, and 159,095 were mulatlatoes, or of mixed African and other blood. Maryland has the largest number of free blacks, 74,723; Virginia has 54,331; Pennsyl-

vania, 53,026; New-York, 49,069; North-Carolina, 27,463; Ohio, 25,279; New-Jersey, 23,810; Delaware, 18,073; Louisiana, 17,462; and the District of Columbia, 10,059. The free blacks in the free States and territories numbered 196,308; in the slave States, 238,187.

Our free colored population is remarkable for its large proportion of very aged persons. It has 2618 persons between 80 and 90; 859 between 90 and 100; and 343 over 100 years of age. The colored females exceed the males in number by 17,000, and appear to attain

a greater longevity than the other sex.

In respect to the occupations of the free colored inhabitants, it may be stated in general that few of them are engaged in the learned professions, and that so far as any account was taken of them in this relation, which was done only in Connecticut, Louisiana, and the cities of New-York and New-Orleans, they appeared chiefly to affect the employments of laborers, carpenters, mariners, servants, barbers, shoe-makers, segar-makers, masons, farmers, and planters. In New-York City, sixty were clerks, doctors, druggists, lawyers, merchants, ministers, and teachers, pursuits requiring education and the exercise of the intellectual faculties. The proportion of such in that city was one in 55. In New-Orleans there were 165 thus occupied, or one in eleven. In Connecticut there are 146 colored farmers; in Louisiana, 158. It is curious to observe that 122 of these colored farmers in Connecticut are "black," that is, of the unadulterated African blood, while out of the 158 in Louisiana only 10 are "black," and the remainder are returned as mulattoes. Thus, too, out of 244 colored planters in Louisiana, 221 are mulattoes.

#### SLAVE POPULATION.

The number of slaves in the Union in 1850 was 3,204,313, of whom 2,957,657 were of unmixed African blood, and 246,656 were mulattoes.

Negro slavery in the United States is nearly coëval with the earliest settlement of the country. The first cargo was landed in 1820, from a Dutch ship at or near Jamestown, in Virginia. Mr. Carey, a well-known writer on statistics, has compiled the following table of the importation of slaves into the United States:

| Prior to 1714 | <b>l</b> |         |        | <br> | <i>.</i> . | <br> | 30,000  |
|---------------|----------|---------|--------|------|------------|------|---------|
| Importations  | from     | 1715 t  | 1750   | <br> |            | <br> | 90,000  |
| - "           | **       | 1751 t  | 1760   | <br> |            | <br> | 35,000  |
| **            | "        | 1761 t  | 0 1770 | <br> | . <b></b>  | <br> | 74,000  |
| "             |          |         |        |      |            |      | 34,000  |
| **            |          |         |        |      |            |      | 70,000  |
| Total         | num      | ber imp | orted  | <br> |            | <br> | 333,000 |

It is suggested that Mr. Carey's estimate of importations since 1790 is too small, because in the four years, from 1804 to 1808 there were imported into Charleston alone 39,075 slaves. But making allowances for this and other errors, it is considered safe to assume

that not more than 375,000 or 400,000 slaves have been imported into the United States since the trade began.

The equality of sexes in respect to numbers among the slave population is remarkable. There were, in 1850, 1,602.535 males, and 1,601,778 females, the difference being less than a sixteenth of one per cent. In 1820 there was an excess of male slaves of 38,000; in 1830, of 16,000; in 1840, of 6000; in 1850, of 757.

The following table presents a complete view of the progress of the slave population in the United States for 60 years:

## Number and Increase of Slaves.

| Consus.  | Number<br>of<br>males, | Number<br>of<br>females. | Excess<br>of<br>males. | Total<br>number of<br>slaves. | Increase<br>in each<br>10, and<br>in 60<br>years, | Increase<br>per centum<br>in each<br>10, and in<br>60 years. | to free |

It will be observed that the females have, as among the free colored, a considerable advantage over the males in regard to longevity. The proportion of the very aged, of both sexes, appears very large when compared with the whites. Among a white population of nineteen and a half millions, there were but 787 persons over 100 years of age; but among three and a quarter millions of slaves there were,

according to the returns, 1425 individuals over that age. The white ratio was four one thousandths of one per cent; the black ratio was five one hundredths of one per cent. That is to say there were upon the face of the returns twelve and a half slaves over one hundred years of age to one white person of that age, out of an equal number of both classes of inhabitants. But it is obvious that little reliance can be placed upon the alleged facts of the census under this head. The slave is not likely to know his own age, nor if he did would he be able to communicate it in an intelligible manner. The master does not know his age, because no records of the births of slaves anywhere exist, and those who have attained a patriarchal length of years have commonly passed through several hands, and nothing better than a vague tradition of the slave's age passes with him into the possession of his last master. The answers to the marshals, therefore, on the age of superannuated slaves were merely approximative conjectures. And the same objections may be urged to the correctness or probability of the tables stating the ages of the free colored. As slavery prevailed in all the States prior to 1780, nearly all the free colored over seventy-five were born slaves, and where and when born cannot often be accurately ascertained.

The imperfection of the returns on the social condition of slaves was so great that no attempt was made to state, in tabular form, the marriages or births taking place among them. The number of deaths among them in 1849-50 was stated to be 52,566, which is presumed to be too small; though from the facility of reporting them, it is supposed to approximate nearer to the truth than is the case with the

free population.

There were reported from among the slave population 531 deaf and dumb persons, 1387 blind, 327 insane, 1182 idiotic; total afflicted by these deprivations, 3427, or a trifle over one tenth of one per cent of the whole. The proportion of such among the free colored is twenty-eight hundredths of one per cent, or nearly three times as numerous. The aggregate of the same afflicted classes among the whites being 46,343, the ratio among them is 237 one thousandths of one per cent, which is forty-three one thousandths of one per cent less than among the free colored. In respect to these returns for the slave population, a little consideration will show them to be of small value. The slaves would not, of course, be expected to answer for themselves; nor would the marshals consider it their business to inquire of their masters concerning the social condition of their servants with any thing like the particularity which they would observe in regard to the white and free colored. Upon their part, the masters would naturally make to such questions very general and indefinite answers. The same impediments to the collection of accurate information on these points must have been experienced as present themselves in the attempt to ascertain the ages of the oldest slave and free colored persons.

#### NATIVITY OF SLAVES.

It is very difficult to distinguish between the native and foreignborn slaves. There have been no importations of slaves worth con-

sidering for upwards of forty years; and it is assumed that not more than 8000 or 10,000 of those previously imported survive. All the remainder are, of course, natives of the country.

#### OCCUPATIONS OF SLAVES.

In no census have the occupations of slaves been recorded. It is thought safe to assume that 400,000 are urban, or residents of cities and towns, and 2,804,313 are rural. Of the latter class it is supposed 304,313 are domestic servants, and 2,500,000 are employed in agriculture. These are distributed between the several great staples of the South in something like the following proportions, as near as can be judged after a careful consideration of the subject, bearing in mind that large quantities of breadstuffs are produced in addition.

| Hemp,    | 60,000    | 2.4 per c | ent. |
|----------|-----------|-----------|------|
|          | 125,000   |           |      |

Where the party owns slaves in different counties or in different States, he will be entered more than once. This will disturb the cal-

culation very little, being only the case among the larger properties; and it will account for the fact that a smaller number of such properties are reported in some of the States than are known to exist, particularly in South-Carolina, Virginia, and Louisiana. By the table it would seem that one fifth of the properties are in a single slave, and nearly one half in less than five slaves.

#### Past and Future Progress of Population of the United States.

Mr. Darby, the well-known geographer, forty years ago constructed a table of population for the United States, based upon an assumed increase of three per cent a year, which corresponded with the actual results of the several censuses in a surprising manner. This calculation was as follows:

| Year. | Estima <b>ic.</b> | Results by Census. |
|-------|-------------------|--------------------|
| 1800, | 5,281,468         | 5,305,925          |
| 1810, | 7,095,964         | 7,239,814          |
| 1820, | 9,535,182         | 9,638,131          |

| 1568, 88,978,929 | 1876,48,499,668                  | 1889, 71,285,122 |                   |

Exclusive of immigration and the additions to population by the extension of territory, the assumed ratio of increase, three per cent per year, is much too great; but a method of computation which so accurately describes our progress for the last sixty years must be useful in estimating the increase of inhabitants for the next half-century.

The ratios of increase of the great geographical divisions at the various decennial periods since 1790 have of course been very dissimilar. New-England, the Middle States, and the Southern Atlantic States, have served as magazines of population for the newer regions west of the mountains. The general increase of New-England in the sixty years has been 170 per cent; that of the Southern States in the same period, 168 per cent; that of the Middle States, 475 per cent. The South-west and North-west having been at the time of the first enumeration uninhabited wildernesses, no comparison of their ratio of increase with that of the other sections can fairly be instituted.

The North-western States have increased from 73,077 inhabitants to 6,379,000, being at the rate of 8.6 per cent; the South-western, from 35,791 to 3,321,117, or at the rate of 9.4 per cent. The ratio of increase for the entire population in sixty years has been 490.15 per cent.

#### Families and Dwellings.

The census showed 3,598,195 families among the white and free colored population in 1850. The total number of dwellings was 3,362,337. A family might consist of one person living by himself or herself in a house or apartment, or of two hundred or more individuals provided for by a common head. A widow or bachelor living alone constituted the most common and unhappy example of the former class of families; the inmates of hotels, hospitals, etc., of the latter. New-York had 6.53 inhabitants to each house; Massachusetts had 6.5; Virginia had 5.73; Wisconsin had 5.42; Florida had 5.35. As a general rule, the number of inhabitants is less to a house in the slave than the free States—caused by the facts that the rural population there bears a larger proportion to the whole, and that the greater warmth of the climate requires more spacious accommodations for residence.

The average number of white and free colored individuals to a family throughout the Union is 5.55. The average number of houses to 100 white and free colored persons in the Union is 16.82. The proportion of families to dwellings in the Union is 107.01 to 100.

In 1851, an English family consisted of 4.83 persons; a French family of 3.97; a Prussian family of 5.13.

#### OCCUPATIONS OF THE INHABITANTS.

A table of industrial pursuits is given in the Compendium, embracing 5,371,876 males, and 321 distinct employments. These are classified as follows:

| Mining.               | 15.203 |
|-----------------------|--------|
| Agriculture,          |        |
| Commerce,             |        |
| Manufactures          |        |
| Navigating the ocean, | 56,025 |
| Internal navigation,  | 83,067 |
| Learned professions   |        |

This classification is somewhat arbitrary. The list of occupations includes lawyers, 23,939; physicians, 40,564; editors, 1372; clergymen, 26,842; all of whom would come under the term "learned professions." Yet the aggregate of these employments is 92,917, nearly fifty per cent greater than the number given under that head in the table.

#### BIRTHS, MARRIAGES, AND DEATHS.

So far as the statistics under these heads afford the means of comparison with information derived from other sources, and so far as they serve to illustrate other returns in the census, they are very

valuable. They will also prove of the highest service in marking out the paths of future explorations; and we may expect that the schedules and instructions for the next census on these branches of the work will be framed with such modifications as experience in the use of those devised for the last shall have suggested.

The subjoined table embraces the results of returns for the entire Union:

Births, Marriages, and Deaths of the White and Free Colored, and their Ratios to the total Population in 1850.

| States, etc.                         | Births.                | Ratio<br>per ct. | Married        | Ratio<br>per ct. | Deaths.      | Ratio<br>per ct. |
|--------------------------------------|------------------------|------------------|----------------|------------------|--------------|------------------|
| Alabama,                             | 12,265                 | 2.86             | 8,940          | .92              | 4,411        | 1.03             |
| Arkansas,                            | 5,483                  | 8.36             | 2,112          | 1.80             | 2,160        | 1.33             |

| T Oregon,                            | 810                    | 2.88             | 168            | 1.26             | 47           | .85              |
| Minnesota, New-Mexico, Oregon, Utah, | 432                    | 8,80             | 404            | 8.56             | 239          | 2.11             |
| Total,                               | 548,887                | 2.75             | 197,029        | .99              | 270,706      | 1.85             |

As an evidence of the extraordinary number of marriages of natives of different States, which are shown by the census, it may be stated that in one town in Mississippi, taken at random, out of 548 families the male and female of 225 were from different States, domestic or foreign; sixty-one were natives of non-slaveholding States, intermarried with those of slaveholding; and fifty-eight of natives with foreigners.

The aggregate number of persons afflicted with the deprivation of reason and the senses among the entire population was

| Total,         | 50,994 |
|----------------|--------|
| Idiotic,       |        |
| Insane,        | 15,610 |
| Blind,         | 9,794  |
| Deaf and Dumb, | 9,803  |

From a table of the nativities of the deaf and dumb, it appears that the foreign-born, constituting an eighth of the white and free colored, furnish less than one eleventh of the number.

## FUTURE PROGRESS OF POPULATION.

The growth of population in so vast a country as ours, with boundaries so liable to change, is subject to so many contingencies, that estimates for long periods in advance can be regarded only as conjectures more or less probable according to the means of information possessed by those who make them. The calculations given below will, however, interest such as have a taste for investigations of this character.

The following table has been carefully prepared upon eight distinct and more or less probable assumptions of future increase. The reader can choose between them. In 1950 the population of the United States would be, in round numbers, 50,000,000, if the increase were no greater than that of Delaware since 1790, which has increased by far the least of all the States. With the increase of the Union for the last ten years, excluding all the foreigners who arrived in that time, the number in 1950 would be 252,000,000. With its average increase since 1790, it would be 450,000,000; but with the increase from 1840 to 1850, nearly 500,000,000. All of these, however, are very improbable, if not to say impossible assumptions. The figures in column 6 will no doubt more nearly express the truth than any other for 1900, and for subsequent periods a mean between columns 7 and 8 would seem preferable. No. 1 is the ratio of increase from 1840 to 1850; 2, ratio from 1790 to 1850; 3, ratio from 1840 to 1850, deducting immigrants; 4, ratio of Delaware since 1790; 5, mean of 2, 3, 4; 6, ratio in 1 until 1890, then ratio of 3; 7, ratio in 3 until 1900, then ratio in 4; 8, ratio in 3 until 1900, and then a mean of 3 and 4.

#### Future Progress of the United States.

| 1                 | 2           | 8           | 4          | 5                          | 6           | 7                                       | 8               |

| 1900, 107,857,504 | 101,585,897 | 76,471,462  | 88,681,800 | 65,345,320                 | 100,337,408 | 64,563,702                              | 70,667,552      |
| 1910,145,907,400  | 186,906,449 | 97,080,521  | 86,268,024 | 80,857,818                 | 127,875,889 | 69,845,234                              | 62,908,678      |
| 1920,193.244.354  | 184,050,184 | 123,248,721 | 89,053,408 | 98,893,088                 | 161,706,801 | 75,209,347                              | 97,258,443      |
| 1980, 269,854,644 | 247,427,565 | 156,457,904 | 42,052,710 | 121,658,277                | 205,286,783 | 80,955,424                              | 114,098,742     |
| 1940,865,972,154  | 332,629,650 | 198,623,809 | 45,252,358 | 149,664,012                | 260,611,571 | 87,205,104                              | 133,554,939     |
| 1950, 497,246,365 | 447,159,670 | 252,152,290 | 48,760,043 | 154,116,667                | 830,546,889 | 98,902,456                              | 157,081,921     |

Upon the assumption above, the distribution of population in 1900 and 1950 would be:

|                      | 1900.      | 1950.       |
|----------------------|------------|-------------|
| Atlantic slope,      | 20,000,000 | 28,000,000  |
| Mississippi valley,  | 32,000,000 | 64,000,000  |
| Pacific slope,       | 11,000,000 | 21,000,000  |
| Gulf slope,          |            | 12,000,000  |
| Total United States, | 70,000,000 | 125,000,000 |

These calculations are all based upon the assumption that the territories of the Union will not be increased during the period from any quarter, which, considering the past, may be taken with some hesitation.

#### EDUCATION.

There were, in 1850, 239 colleges empowered to grant degrees, in which were employed 1678 teachers, and were taught 27,821 students. The endowments of these institutions amounted to \$468,614, and their annual income was \$1,964,428.

The number of public schools was 80,978, employing 91,966 teachers, and providing tuition for 3,354,011 pupils. The amount of annual taxation for the support of these schools was \$4,653,096. The amount of public funds appropriated for their use was \$2,552,402; and of funds otherwise denominated, \$2,141,450.

There were in all the States 6085 academies and private schools, in which were occupied 12,260 teachers, and which were attended by 263,096 pupils.

The total number of scholars, students, and pupils attending all these educational establishments was 3,644,928, and the average number of such establishments to the 100 square miles was 2.97.

The number of "colleges," distinct from those enumerated with schools, etc., was 119, to which were attached 1032 professors, 11,903 students, and which possessed libraries containing 963,716 volumes. There were 44 theological schools, in which were 127 professors and 1351 students. The number of medical schools was 36, educating 4947 students. There were 16 law schools, the professors in which numbered 35, and the students 532. Total number of colleges 215, to which belonged 18,733 students.

The following synopsis of a statement in detail on the subject presents a general view of the uneducated portion of the population.

#### PERSONS WHO CANNOT READ AND WRITE.

The prevalence of public instruction in various countries is shown in the following curious table:

Proportion of Scholars at Schools, to the whole Population.

| Countries.          | 1 Scholar to<br>Persons. | Countries.        | 1 Scholar to<br>Persons. |
|---------------------|--------------------------|-------------------|--------------------------|
| Maine,              | 8.1                      | Great Britain,    | 8.5                      |
| Denmark,            | 4.6                      | " actually at sch | ool, 7.0                 |
| United States,      | 4.9                      | France,           | 10.5                     |
| " including slaves, | 5.6                      | Austria,          | 13.7                     |
| Sweden,             | 5.6                      | Holland,          | 14.8                     |
| Saxony,             | 6.0                      | Ireland,          | 14.5                     |
| Prussia,            | 6.2                      | Greece,           | 18.0                     |
| Norway,             | 7.0                      | Russia,           | 50.0                     |
| Belgium,            | 8,8                      | Portugal,         | 81,7                     |

It is certainly fair to exclude our slaves from the calculation, as they cannot become citizens, and do not form a portion of our political society. With this deduction from the population, the United States stands nearly upon a par with Denmark, where public education is more generally diffused than in any other part of Europe, and has a much larger proportion of youths at school than any country, with the above exception, and perhaps some of the inconsiderable states of Germany, in the world. The deficiency of education among the lower classes of Great Britain is indicated by the following facts:

In the whole of England and Wales, among 367,894 couples married in 3 years, 122,458 men and 181,378 women could neither read

nor write. In 1842, 38,031 men and 56,965 women, out of a total of 118,825 couples, affixed their marks instead of signatures; in 1844, 42,912 men and 65,073 women, out of a total of 132,249 couples. In 1846, in London, 11.6 per cent of the men, and 22.6 of the women affixed their mark. Throughout all England and Wales, 32.6 per cent of the men and 48.1 of the women marrying, affixed their mark. In the French army in 1851, of 311,218 conscripts, 34 in a hundred could neither read nor write,  $3\frac{1}{2}$  could read only,  $59\frac{1}{2}$  in a hundred could read and write, 3 in 100 unknown. It has already been stated that in the Prussian army of 122,897 only 2 persons could not read and write.

#### THE PRESS.

The origin of newspapers may be traced to Italy in the sixteenth century. The first in England appeared under Queen Elizabeth, at the time of the Spanish Armada. The earliest newspaper was entitled the English Mercurie, imprinted at London, by her Highness' printer, 1588. Periodical papers were first used during the civil wars of the commonwealth. The earliest newspaper in North America was the Boston News-Letter, issued April 24, 1704. In 1720, there were but seven newspapers in the American Colonies. In 1775 thirty-five, to wit: 7 in Massachusetts, 1 each in New-Hampshire and Georgia, 2 each in Rhode-Island, Maryland, Virginia, and North-Carolina, 3 in South-Carolina, 4 each in Connecticut and New-York, and 9 in Pennsylvania.

The newspaper and periodical statistics of 1850 fall short of, rather than exceed, the reality.

The following is a condensed statement of the results of returns under this head of inquiry:

| Daily papers in the United States in 1850,            | 254<br>. 235,119,966 |
|---|----------------------|
| Tri-weekly papers,                                    | . 115                |
| Number printed annually,                              | . 11,811,140         |
| Semi-weekly,  | . 31                 |
| Number printed annually,                              | . 5,565,176          |
| Weekly,   | . 1,902              |
| Number printed annually,                              | . 153,120,708        |
| Periodicals.  |                      |
| Semi-monthly,   | . 95                 |
| Copies circulated annually,                           | 11,703,480           |
| Monthly,  | 100                  |
| Copies circulated annually,                           | 8,887,808            |
| Quarterly,  | . 19                 |
| Copies circulated annually,                           | 103,500              |
| Total number of newspapers and periodicals,           |                      |
| Total number of copies printed annually,              | 426,409,973          |
| These were classified according to subject and chara- | eter as follows:     |
| Literary and miscellaneous,                           | . 77,877,276         |
| Neutral and independent,                              |                      |
| Political,  |                      |
| Religious,  |                      |

| Philadelphia, | Pennsylvania,   | 51            | 48,457,240               | 950,142              | 125   |

In 1827, there appeared in Great Britain, 483 different newspapers and other periodicals, to 23,400,000 inhabitants. In 1842, papers in London 125, circulation 32,166,474; England, exclusive of London, 221 papers, 17,508,381 circulation; Wales, 12 papers, 445,930 circulation; Scotland, 76 papers, 5,388,079; Ireland, 87, 5,986,639. Total papers, 521; circulation, 61,495,503. In Sweden and Norway, 82 journals to 3,866,000 inhabitants; in the States of the Church, 6 newspapers to 2,598,000 inhabitants, (Stockholm, with 78,000 inhabitants, has 30 journals; Rome, with 154,000 only 3;) Denmark, to 1,950,000 inhabitants, has 80 journals, of which 71 are in the Danish language; 23 are devoted to politics; 25 to the sciences. Prussia has 12,416,000 inhabitants, and 288 journals and periodicals.

(Berlin has 221,000 inhabitants, and 53 periodical works; Copenhagen has 109,000 inhabitants, and 57 journals.) The Netherlands have 3,000,000 inhabitants, and 150 journals. In the German Confederation, (excluding Austria and Prussia,) there are 13,300,000 inhabitants, and 305 journals; in Saxony, to 1,400,000 inhabitants, 54 newspapers; in Hanover, to 1,550,000 inhabitants, 16 newspapers; in Bavaria, to 3,960,000 inhabitants, 48 newspapers. France, with a population of 32,000,000, has 490 periodical works, (660 printing establishments, 1500 presses;) in Paris, 81 printing establishments, or 850 presses. In Paris alone, containing 890,000 inhabitants, there are 176 periodical works. This has reference to the population at the period when the newspaper statistics were collected.

The total number of public libraries of all kinds is stated to be 15,615, containing 4,636,411 volumes. The libraries having 50,000

volumes and upwards were the following:

| Harvard University,   | 84.200 |
|-----------------------|--------|
| Philadelphia library, | 60,000 |
| Yale College,         | 50.481 |
| Library of Congress,  | 50.000 |
| Boston Athenæum       | 50.000 |

## Great Libraries of Europe in 1848.

| Libraries.              | Vols.   | Librarice.              | Vols.   | Libraries.      | Vols.   |
|-------------------------|---------|-------------------------|---------|-----------------|---------|
| Paris National,         | 824,000 | Madrid National,        | 200,000 | Naples Royal,   | 150,000 |
| Munich Royal,           | 500,000 | Wolfenbuttel Ducal,     | 200,000 | Brussels Royal, | 183,500 |
| Petersburgh Imperial, . | 146,000 | Stutgard Royal,         | 187,000 | Rome Casanate,  | 120,000 |
| London British Musin,   | 135,000 | Paris Arsenal,          | 180,000 | Hague Royal,    | 100,000 |
| Copenhagen Royal,       | 112,000 | Milan Breza,            | 170,000 | Paris Mazarin,  | 100,000 |
| Berlin Royal,           | 110,000 | Paris St. Genevieve,    | 150,000 | Rome Vatican,   | 100,000 |
| Vienna Imperial, 8      | 318,000 | Darmstadt Grand Ducal,  | 150,000 | Parma Ducal,    | 100,000 |
| Dresden Royal,          | 800,000 | Flor'ce Magliabecchian, | 150,000 |                 |         |

The date of the foundation of some of the chief libraries is, Turin, 1436; Cambridge, 1484; Leipsic, 1544; Edinburgh, 1582; the Bodleian, 1597; University Salamanca, 1215.

## PAUPERISM.

There were in the United States on the 1st of June, 1850, 50,335 paupers, of whom 36,916 were natives, and 13,437 were foreigners. There were supported or relieved by public charity within the year, 134,972, of whom 66,434 were natives, and 68,538 were foreigners. The aggregate annual cost of their support was \$2,954,806.

## Religious Worship.

The census statistics upon religious worship do not give, as they are often quoted, the number of church members in the United States, nor the number of persons attending public worship; but only state the capacity of the churches to accommodate.

| Methodist,      | 4,354,101 | Friends,         | 287,073    |
|-----------------|-----------|------------------|------------|
| Baptist         |           | Universalists,   |            |
| Presbyterian,   |           | Union,           |            |
| Congregational, |           | German Reformed, |            |
| Roman Catholic, | 675,721   | Unitarian,       | 136,417    |
| Episcopal       | 614,598   | Moravian,        |            |
| Lutherans,      | 535,180   | Free,            |            |
| Christians,     | 304,630   | Minor Sects,     |            |
| Water!          |           |                  | 14.070.120 |

As we have observed, the census contains no returns upon church membership, and the above statement of church accommodation affords only the means of estimating the probable ratio of each sect to the whole number of professing Christians. It is obvious that the total number provided for, comprising nearly two thirds of the entire population, is very far beyond the aggregate of church members. The following table, extracted from a religious periodical of the year 1850, presents an intelligent and candid view of the

Religious Denominations in the United States.

| _Names.                         | Churches. | Ministers.          | Members.       |
|---------------------------------|-----------|---------------------|----------------|
| Methodist Episcopal,            |           | 3,716               | 629,660        |
| " South,                        |           | 1,500               | 465,553        |
| " Protestant,                   |           | 7.10                | 64,31 <b>3</b> |

The schedules embracing information on these topics were defective as to many particulars of the inquiries specified in the instructions to the marshals. After supplying from other sources of information

these imperfections, the subjoined table was constructed at the Census Office. It gives a condensed statement of many important facts in this connection.

Corrected Value and Accommodations of Churches, with their proportion to the area of the United States.

The average value of churches in the United States would therefore seem to be \$2357; their average capacity of accommodation, 376 persons.

Those who may desire to compare the religious statistics of the geographical sections will be interested in the following table:

Church Value and Accommodation for the several great Sections.

#### COMMERCE.

The length to which this article has been already extended obliges us to pass hurriedly over many interesting commercial tables, which we may take occasion hereafter to analyze, but for the present confine ourselves to the most cursory notices of some of the more prominent statements.

The statistics of the various branches of commerce in the several States, though ascertained by the census of 1840, were omitted among the items of that of 1850, except as to the number of persons employed, and the nature of the business employing them. There were in 1850 100,752 merchants proper, and 14,917 traders, if reliance can be placed on the figures, which is doubtful. Prof. Tucker, from the returns, estimated the annual product from commerce in 1840 at \$97,721,086; \$40,680,081, or more than half, being for the Middle States, \$13,528,740 for the New-England, \$11,967,281 for the South, \$14,255,964 for the South-west, and \$17,289,020 for the North-west. Without doubt the figures are low. It would be fair to estimate the home and foreign commerce of the United States in 1850 at \$1,500,000,000,000, paying a profit of 20 per cent, or \$300,000,000, or more than the profits of manufactures. However, these are but mere hypotheses.

Ratio of Commerce, Debt, Revenues, Expenditures, etc., to the Population of the United States, 1790-1853.

## STATISTICS OF INDUSTRY-MANUFACTURES-AGRICULTURE.

The statistics of manufactures are still under examination, and the results will be published when Congress shall order them printed. It is nearly three years since a portion of them were laid before the country in tables which were received by the business classes with much satisfaction, and were thought highly valuable. They encountered, however, an opposition in Congress, composed in about equal degrees of ignorance and malice, and the publication was suspended. Until the injunction of secresy shall be removed, some of the most valuable information collected in taking the census must remain buried in the archives of the Office.

The tables illustrating the condition of industry in the United States in 1850, are not materially different from those published in the first reports from the Census Office; but there are some additions to them, supplying a mass of valuable information.

The average number of acres embraced in each farm in the United States is 203, valued at \$2258, and upon each farm there is an average of \$105 in implements and machinery. In Louisiana, so complicated is the sugar process, the average machinery is \$863 to the farm.

By a table prepared by sections, it would seem that only about one thirteenth of the whole area of the organized States and territories is improved, and about one eighth more is occupied and not improved. In New-England about 26 acres in the 1000 are improved; in the South, 16 acres; in the North-west, 12; and in the South-west, 5. In the South the number of acres to the farm is largest, but the value per acre is most in the Middle States. The average value per acre for the Union, improved and unimproved, is \$11.14. The whole number of acres occupied is 293,560,614, or nearly one sixth part of the national domain.

Agricultural Ratio Tables of the States, 1850.

By a special resolution of the Senate, the Census Office was requested to furnish a statement showing the quantity of land cultivated in each of the agricultural staples of the country. The time was not sufficient for the collection of material necessary to prepare such a statement fully for the present volume, as an extensive correspondence would be required. By an examination of the marshals' returns, showing the average product to the acre in every county for a good crop, and the actual product in the year of the census, approximate data were obtained from which the following table was compiled. It is the best that can be offered, and is the only table of the kind ever published.

Land actually cultivated in the several crops of the United States, 1849-50.

| Products.                       | Acres.            | Products.                          | Acres.            |
|---------------------------------|-------------------|------------------------------------|-------------------|
| Indian corn,                    | 81,000,000        | Buckwheat,                         | <b>60</b> 0,000   |
| Meadow or pasture lands—that pr |                   | Tobacco,.                          | 400,000           |
| portion which is regarded in    | m-                | Sugar,                             |                   |
| proved, and exclusive of h      | ay                | Barley,                            | <b>8</b> (%),(%#) |
| crop,                           | 20,000,000        | Rice,                              | 175,000           |
| Hay,                            |                   | Hemp,                              | 110,000           |
| Wheat,                          | 11,000,000        | Flax,                              | 100,000           |
| Oata                            |                   | Orchards,                          | <b>5</b> 00,000   |
| Cotton,                         | 5,666,600         | Gardens,                           | 500,000           |
| Rye,                            |                   | Vineyards                          | 250,000           |
| Peas and beans,                 | 1,000,000         | Other products,                    | 1,000,000         |
| Irish potatoes,                 | <b>1,</b> 000,000 | Improved, but not in actual culti- |                   |
| Sweet Potatoes,                 | 750,000           | vation,                            | 17,247,614        |
| Total improve                   | ed lands,         | ••••••••                           | 113,032,614       |

It would thus appear that the actual crops do not account for 17,247,614 acres, which are returned as being improved. It is possible the total reported as improved is exaggerated by a part of this difference, say 9,000,000 acres, which would leave about 8,000,000 for waste yet improved lands.

The subjoined table is re-published with some corrections from the report of 1851:

# Agricultural Products of the United States-1850 and 1840.

| Agricultural products.        | 1850.                       | 1840.                       |

<sup>\*</sup> Dairy products.

† Amounts produced by individuals less than a bale, hogshead, or ton of any agricultural product where these measures are adopted, are not aggregated or reported. Hence a large production of such articles escaped enumeration.

The staple productions of the Southern States are those which furnish the chief material for the export trade of the Union. The folfowing details concerning them are interesting:

Number of Cotton, Sugar, Rice, Tobacco, and Hemp Plantations.

NEW TURKISH LOAN.—The Turkish government have applied for a fresh loan of five millions sterling; which it is believed can be secured at favorable rates, with

guarantee of France and England.

"The guarantee," Lord Palmerston observed, "will be a joint one of England and France, and of course half the obligation will apply to one and half to the other nation." The question is, How will the distinction between each moiety be contrived? Will there be separate bonds for the respective amounts, or is it to be understood that in case of any want of punctuality on the part of the Turkish government, the claimants are to look to England for only one half of the dividend due to them, and to seek the remaining half in Paris? The point might become serious at a future time, when the government of France may be in other hands, and when a dispute might be raised as to the default being attributable to one or the other power being unwilling to put the requisite pressure on Turkey; and hence curiosity is felt as to the mode which has been adopted for its solution in the conditions now agreed upon.

## CURRENCY OR MONEY.

Remarks on Currency or Money: Its Nature and Uses, and the Effects of the Circulation of Bunk-Notes for Currency. By a Merchant of Boston. 8vo. pp. 112. Boston: Little, Brown & Co.

#### CHAPTER FOURTH.

### ADVANTAGES OF THE CURRENCY OF THE PRECIOUS METALS.

I. Standard of Value. II. Wear and Tear of Gold and Silver. III. Amount of Money required for Commercial Transactions. IV. Cost of a Currency of Precious Metals. V. Prohibition of Notes under Ten Dollars. VI. The Currency of England and France. VII. Delegation of the Power to Create Money. VIII. Comparative Table of Bank Capital, Circulation, and Specie in the United States. IX. Bank Failures in Scotland. X. Suspension of Specie Payments.

Ir has, at the outset, been remarked that the service which is rendered by the precious metals as a just standard of the value of property, can be rendered by nothing else with so much exactness and justice and convenience; that they are the only materials that can furnish a sound and substantial currency of uniform value. Whenever they are used for the currency of a country, the natural laws of trade will always regulate the quantity of them; and will dispose of any excess of them, without aid from legislation, and without inconvenience to the community. If the gold from California were used for currency, when the quantity in the country at any time became excessive, the same effects would be produced that were observed in Spain after the conquest of Mexico and Peru. The laws of commerce would now, as then, distribute the excess through other countries.

There would be no objection to sending the precious metals away, if the country at any time possessed as much of them as could be advantageously used. For the excess of them may then be, like the excess of breadstuffs or cotton, of more value to export. But so long as a valuable use can be made of them at home to furnish a sound currency, it is a clear loss to exchange them for the products of the labor of other countries, to be brought home to compete with the products of the labor of our own country. There is one respect in which an excess of the precious metals in the country differs very materially from an excess of cotton, or of any other commodity. It is that a surplus of gold and silver may be laid by and reserved for use at any future time without expense or loss; whereas most other commodities are injured or destroyed by time, and the bulk of many of them renders the care and expense of protecting them for a long period equal to their value.

Gold and silver cannot be considered an expensive currency in

consequence of their waste or wear. It has been proved by careful experiments, that the loss, when in use for currency, by friction or wear, is less than half of one per cent a year on silver, and does not exceed a half of one per cent in ten years on gold.

The amount of money required to transact the business of a community, for which paper money can be substituted, is much less than is usually supposed by those who have not considered the subject. Financial writers variously calculate the whole amount required in an active business community, at sums varying between ten and fifteen dollars a head for the population. With a mixed currency, consisting only in part of paper money, still less would be required. Ten dollars a head would probably be a large estimate for the amount of paper that could be substituted for coined money without greatly depreciating the currency. The amount of paper circulation in England, Scotland, and Ireland, is less than forty millions sterling—equal to nearly thirty shillings sterling, or little more than seven dollars, a head for the population. In the State of New-York, containing as active a trading and commercial community as can be found in any part of the world, all the bank-notes are supplied by the State, and registered and countersigned by a State officer. No bank, whether it be incorporated or organized under the general law, is allowed to issue any other notes for circulation. According to the official returns on the 30th of September, 1854, the whole amount of such notes furnished to incorporated banks was \$19,300,963, and to banks organized under the general banking law, \$24,661,572, making together \$43,962,535; or about twelve dollars a head for the population of the State, including the amounts held by the banks, and therefore not in circulation. There is probably no community in the world where paper money is so freely used as in the State of Massachusetts. Each one of its hundred and sixty-eight banks can have printed and ready for use as many notes as they please. The law allows them to be circulated to the extent of one quarter more than their capital, but attaches no penalty for exceeding that amount. The capital of the banks of Massachusetts exceeds fifty-six millions of dollars, which would allow an aggregate circulation of more than seventy millions of dollars. Some of the banks often exceed their proportion, but no notice has been taken of it, when the published returns have shown any of them to have exceeded the lawful limit of circulation. It appears by the annual official return for 1854, that there are nearly twenty-five millions of the notes of the banks of Massachusetts in circulation. A large amount, however, of each others' notes is returned as held by the banks themselves. Moreover, there is always a large amount of notes issued by banks in the country, instead of checks, which do not really become general circulation, being merely transmitted for payments in large sums, instead of a check or draft, to gain the advantage of a few days in interest, and they are immediately sent into the Suffolk or some other bank in Boston, which acts as the agent of the country banks. There are, likewise, large amounts of bills at these agency banks in Boston, which have been redcemed. but not yet sent back to the country banks that issued them, and

must therefore appear in the returns as circulation. Making these allowances, the whole amount of bills actually circulating among the people in Massachusetts does not probably exceed twelve or fifteen millions of dollars, or about from twelve to fifteen dollars a head for the whole population of the Commonwealth. This conforms very nearly with the issues of bank paper in the State of New-York. If the actual amount of paper circulating in Massachusetts amounts to fifteen millions of dollars, since checks and drafts could be advantageously substituted for many of the purposes for which bank-bills are now used, it would not require more than ten millions of coined money—less than the product of California in three months—to supply a sound, uniform, and substantial currency in its place.

When stated in the aggregate, ten millions of dollars seems to be a large sum; but so the aggregates of all articles of general use appear. The number of barrels of flour consumed in Massachusetts in a year seems enormous to one who has never reflected upon it. If they could be seen piled together in a mass, they would look as if there could not be found storchouses in the commonwealth to contain them. Ten millions of dollars is only about ten dollars a head for the population, and is less than two per cent of the amount of taxable property in the State, as returned by the last valuation committee, the amount of which was nearly six hundred millions of dollars; which estimates, being made for taxation, are known to be a low valuation. When the aggregate amount of the industry and of the property in Massachusetts is considered, the value of which must be measured by the money or currency in use, whatever it may be, the amount of currency required to perform so important a service seems small in the comparison. Every one has a right to claim that the money which measures that value, shall be of a character to perform the service in the most unvarying and the most exact manner; and, above all things, that it shall be as near an approach as is possible at all times to a just measure.

What would be the cost to Massachusetts of ten millions of the precious metals to use for currency, instead of paper money? If the \$41,197,300 of gold and silver that were exported from the United States, during the single year ending in June, 1854, had remained in the country, at least one tenth part of the amount would have rightly belonged to Massachusetts, with her extensive commerce and manufactures. This would have supplied nearly one half of the amount required in a single year. To the industry of Massachusetts, it would have been worth, at the least, as much more, by the protection it would have given to her manufactures against foreign competition, by lessening, to that extent, the amounts of foreign importations, which it was sent abroad to pay for.

Again, let it be remembered that coined money is not consumed by use, like flour, or wines, or silks, and many other commodities. Once in the possession of a community that will use it for currency, it remains to perform its important service again and again, not only for ourselves but for future generations. Our manufacturers, by opposing the use of coined money, or encouraging the use of paper

money in the place of it, encourage the importation of foreign manufactures. They then ask from the national government high tariffs to protect them against the evil effects of the paper money. The only inducement to use paper money is to render money more plentiful. This plenty cannot exist without causing a rise of prices; and for that reason it is popular. But the rise of prices will increase the cost of domestic productions, and encourage foreign importations. The only remedy for this effect of paper money is a high tariff. Without it, no benefit can be derived by the industry of the country from the increased amount of money in circulation and the high prices produced by it. Paper money and a high tariff should go together. With a low tariff, a substantial currency is indispensable to the industry of the country. With such a tariff, the only one that can hereafter be obtained, and with such a currency of real money, the industry of the country will take care of itself.

With the large quantities of gold that are constantly brought from California by the enterprise of the citizens of Massachusetts, there could not be any trouble or inconvenience in supplying, by degrees, the place of the present paper money with the precious metals. To avoid trouble and inconvenience, it ought to be done gradually, by a law to prohibit the circulation of any notes below the denomination of ten dollars, after one year from the passage of the act. This would give the banks time to recall the notes of smaller denominations, and

for the specie to be circulated to take the place of them.

In England and France, the two greatest commercial countries of Europe, paper money can hardly be said to exist, in the sense in which it exists in the United States. For the Bank of England and the Bank of France, both of which are so organized that those governments exercise great influence in their management, are not permitted to issue bills of a denomination so small as to be used in the everyday transactions of retail purchases and sales. In England, the lowest denomination of bills is five pounds, equal to nearly twenty-five dollars of our money; and in France, until recently, the limit was five hundred francs, nearly one hundred dollars of our money. The Bank of France has, within a few years, issued bills for one hundred and two hundred francs, equal to about twenty and forty dollars. The smallest denominations of bank-notes in England and France are too large for the common use of the people; their use is confined almost entirely to purposes of trade, or for transactions that require large sums of money.

Since the peace of 1815, the government has been constantly strengthening the currency of England, which had depreciated during the war. Specie payments were resumed. Notes of a smaller denomination than five pounds were abolished. And when the Bank of England was re-chartered in 1844, it was not intrusted with the unrestricted power to expand and contract the currency by its issues of paper money. Its issue of paper without a cash foundation is limited to fourteen millions of pounds sterling, equal to about sixty-eight millions of dollars, and it is required to keep that amount specially invested in government stocks. The Bank of England must have

specie in its vaults for every note issued for circulation beyond that sum. Thus it has no interest in extending the issue of paper beyond the fourteen millions, as it could not loan or invest it, but would be obliged to keep the amount on hand in bullion or coin. No bank organized since 1844 is allowed to issue any bills for circulation, and a limit is fixed to the circulation of all banks organized before that period

Paper money has been sometimes used in times of war, for the purpose of giving to government the control and use of the real money of a country. It exists in Austria and some other despotic countries, where the governments can control it, and where they control all property. But it is only in the United States that communities can be found willing to delegate to individuals and to private corporations the despotic, and sovereign, and irresponsible power of furnishing and controlling the currency, which measures the value of all the property

of the country.

It seems strange that any community, aware of the nature and the effects of paper money, should be willing, for any consideration, to transfer to private individuals, or to corporations, which are in fact managed by private individuals, the right to furnish for the currency of the country any thing but real metallic money. It is true, that the direct cost of paper money is only the expense and the trouble of the printing and the paper; but wherever it is used, it regulates the price of all the salable property in the community. In the United States, paper money is at variance, not only with the fundamental law, but with the policy of the national government. All the eminent statesmen of the country have evidently considered the system of paper money as one which was only to be tolerated for a time, and that we should, at some early period, come back to the constitutional currency, at least for general use among the people. Mr. Webster, in a speech delivered more than twenty years ago, said: "Of all the contrivances for cheating mankind, none has been more effectual than that which deludes them with paper money. This is the most effectual of inventions to fertilize the rich man's field with the sweat of the poor man's And on another occasion he said: "My proposition would be, that banks should be restrained from issuing for circulation bills or notes under a given sum, say ten or twenty dollars; this would diminish the circulation, and consequently the profits, of the banks. But it is of less importance to make banks highly profitable institutions to the stockholders, than that they should be safe and useful to the community." The use of paper money was long since discontinued by the national government, but it has been permitted, and indirectly protected and sanctioned, by most of the State governments. though it has never been directly recognized or legalized by any of them as real money. Paper money is an excrescence which has grown up illegitimately on the body politic; but, as it is based on false principles, it cannot be expected to endure. Either its evils will continue to augment until an enlightened public will no longer bear them, or an intelligent, judicious, and gradual change to a more substantial and to a more just system will be introduced. By the

report of the Secretary of the Treasury of the United States to Congress, of the condition of the State Banks, dated May 6, 1854, their circulation was \$204,689,207. In an estimate for November of the same year, the circulation is \$171,417,000. Showing a reduction of more than thirty-three millions, which fully accounts for some portion of the recent scarcity of money and commercial distress, namely:

NUMBER OF BANKS, BANK CAPITAL, BANK CIRCULATION, AND SPECIE OF EACH STATE, NOVEMBER, 1854.

| State.                | No. of Banks. | Capital.      | Circulation.      | Specie.      |
|-----------------------|---------------|---------------|-------------------|--------------|
| Maine,                | 67            | \$6,723,000   | \$5,817,000       | \$1,200,000  |

The circulation and specie of the Southern and Western States are in part estimated.

It is absurd to suppose that the prosperity of the United States is the result of the use of paper money, as some of the advocates and admirers of it have asserted. The truth is, that the country has prospered in spite of such money; and the energy and enterprise of the people have restored prosperity after convulsions of the currency, occasioned by the use of bank-notes, that would have prostrated for a time any other country. Paper money may have been beneficial when the country was drained of its wealth and desolated by the effects of long and expensive wars. But forty years of peace and prosperity that has only been interrupted by violent contractions and

expansions of the currency, have increased its wealth to a prodigious extent, leaving no apology for a "cheap currency," which must from its nature constantly fluctuate in value and quantity, and operate with injustice upon all the pursuits of industry. The intelligent and skillful speculator may find his advantage in watching the changes of such a currency, to secure the profits of the delusive prosperity during the times of expansion, and he may avoid the losses occasioned by the contractions that follow them. But the public receive no benefit from these fluctuations of currency. Scotland is often referred to as evidence of the successful use of paper money. If the interest of the stockholders of the banks is the only thing to be considered, the success of the Scotch banks would be satisfactory. A bank failure has rarely occurred there. But if the condition of the population, and of thn ownership of the landed property of Scotland is the result of the use of paper money, it would not commend the system to our legislators. Probably fewer than twenty individuals possess the fee of more than three quarters of the whole territory of Scotland. It is said of one of them, that he can ride ninety-nine miles in a straight line without going off his own estates. The laws of primogeniture and entail originated this evil, which the use of paper money may have protected and extended. There are in Scotland men of as great wealth, and learning, and accomplishment as can be found in any part of the world. But the masses of the people, particularly those who are crowded into the narrow streets and closes of Edinburgh, Glasgow, and other large towns, are poor, ignorant, and degraded beyond any thing that an American can conceive of.

The suspension of specie payments in Great Britain, in 1797, may have been necessary to enable the government to use the coin of the country to pay the expenses of the war on the continent; and a similar necessity may exist again, if the present war with Russia is continued. Paper money was useful in the United States, during the war of the Revolution, when the resources of the country were exhausted by desolating and expensive hostilities, which rendered it impossible to provide a more substantial currency. The profitable commerce of the country, during the twenty years that followed the peace, and the adoption of the Federal Constitution, might have supplied a specie currency without inconvenience, which would have secured a permanent benefit by placing the prosperity of the country on a firmer basis. The suspension of specie payments, during the war of 1812, would certainly have been neither expedient nor necessary, if real money had been previously introduced into the circulation of the country, in the place of bank paper. The Federal Constitution prohibits the use of paper money for currency, but, thus far, selfish-

ness has triumphed over that provision of the Constitution.

The Practice of Banking, and Effects of the Currency in New-England.

There are two errors with regard to currency or money, which have been diligently pressed upon the public, by those who advocate the use of paper money, and upon which all their arguments in favor of it are based. The first is, that paper money, so long as it is redeemable on demand in specie, cannot depreciate, because of the demand for specie which its depreciation would produce. But in fact it does depreciate, and the remedy for that depreciation, by which its value may be restored, is the demand for specie. The operation of that demand, when it occurs, drains the country of its coin, checks suddenly all bank loans, reduces the amount of money in circulation, and produces a decline in the value of all kinds of property. It usually brings dismay and ruin to many, particularly to the enterprising and industrious of limited means, who have been tempted to extend their business by mere appearances of prosperity produced by the increase of paper money, and the consequent depreciation of these paper values.

The second error is, that, by the use of paper money for currency, the coined money of the country is so much additional capital to be invested for the benefit of the industry of the country. In truth, it will be found that the coined money, when paper money is substituted for it, is of more value to export. And it always is exported to pay for the importations of the products of foreign labor to compete with the products of domestic industry; thereby depriving home industry of any benefit from the rise of prices caused by

the additions of paper money to the currency. Another favorite assertion made by those not familiar with the subject, or by those whose interests have blinded their powers of reasoning, is that, as to the doctrines of money or currency, experience is better than theory. With all deference to the teachings of a true experience, may not one presume to ask whose experience is referred to as a guide? because the experiences of men differ. Every one is apt to refer to his own particular experience. In a legislative assembly, an intelligent agent of some corporation, in the absence of a better argument, announces that he is content with experience, and those who please may go back "to the primary school of theory." But what is his experience? He may be receiving large salaries for different agencies, and may well be content with that experience, particularly when it leaves him leisure also to attend to the business of legislation. At the very moment when one of these agents was expressing in the Legislature at Boston his satisfaction with his experience, during a discussion of the currency question, the four hundred workmen employed by one of the corporations of which he was the agent, were on a strike to express their dissatisfaction with the value of money, and discontent with their experience, because it differed so much from the agreeable experience of their immediate employer. To refer again to Scotland, where the use of paper money is said to have been most successful, we have noticed how different is the experience of some twenty individuals, who possess the fee of more than three fourths of the whole surface of the land, from that of the masses of the people. The proprietor of the estate before mentioned, who can ride nearly a hundred miles in a straight line without going off his own grounds, might be expected to prefer his experience to any theory, unless he possesses less than the usual degree of selfishness.

For him, the paper currency of Scotland may have proved itself "the most perfect in the world."

In fact, the truth of any theory must always be tested by the light of experience. If the theory is sound and true, it will harmonize with experience. It may occasionally happen, that the prophetic wisdom of a Newton may suggest true theories in advance of facts afterwards explored. But the ordinary course of a true settlement of principles and theories is by a careful examination of known and well-ascertained facts; and such theories are to be respected as guides and constitutional laws for future action. Whenever the naked argument of the superiority of experience over theory is used, it is too often prompted by the dictatorial spirit of ignorant conceit, or by some interested motive.

It is often said that the United States is not yet rich enough—that it does not possess sufficient capital, to have a sound and substantial currency. If this means that there is not sufficient real money in the country to conduct its business, it is true; and it will continue to be true, so long as the currency of the country consists, as it does now, of paper money issued by the banks. The capital or property of the country has accumulated quite sufficiently to constitute the nation one of the first class in wealth. The only difficulty is, that too small a proportion of the property of the country consists of real money. An ample, uniform, and constant supply of money or currency to conduct business, is essential to the highest prosperity of an industrious people. When that currency consists of the precious metals, it is one of the most useful, and one of the most valuable to the community, of all the different kinds of property that can exist in a civilized and commercial country.

It is common to speak of the amount of money invested in any enterprise. But, in reference to any enterprise within the country, the amount of money expresses only the value of the labor and materials that have been invested. The money can only be exchanged for them. It is not consumed, but remains in the country to perform its useful functions again and again. It is only when the money is exported to pay for the products of foreign labor, that it can be said to be consumed, or used, or lost to the country; particularly, if it is exported to pay for articles of mere luxury, that are consumed by use without adding to the wealth of the country. So far as paper money can be substituted for it, the coined money becomes useless at home, and will be exported. The paper money, that supplies its place, will be constantly fluctuating in amount, as the interest or convenience, the confidence or the fears, of those who issue it may dictate. It therefore affords an unstable and unjust standard by which to measure the value of property. It is as if the bushel, the gallon, the pound weight, and the yard measures of commerce were by law required to be constructed of such materials that their capacity, weight, and measure were invisibly affected by the wonderful electrical changes which are always taking place about us, and constantly expanding or contracting their capacity or solidity. In that case, Professors Silliman, Pierce, Agassiz, and a few other scientific men, might understand what they

were about when making purchases or sales. But to the rest of the community, all transactions of trading would prove only a modified sort of lottery, in which the adventurers would be quite at the mercy of the managers, or of the accidental condition of the atmosphere. If paper money is ever useful to a country, it can only be in great emergencies; and it should be reserved as a resource to supply the means for the defense of the country, when other resources are exhausted. At such a time, it may be used for the business transactions within the country, to release the coin from that service, so that it may be used by the government in the exigency for the common welfare.

In the applications to the Legislature for new bank charters, the principal argument that is always urged is, that the existing banks cannot furnish all the loans or discounts that are asked for. An increase of the bank capital to the greatest extent would not relieve that difficulty; for the increase of the bank loans would only cause an increase of currency, and a rise of prices, and, consequently, a still greater demand for money. The creation of new banks and the increase of bank capital is not a creation of money. So far as it consists of real capital, it is only investing funds that are already in existence, and employed in some other way, in a new company, under the control of a certain set of persons for banking purposes. Most business people, particularly those who are inexperienced, or those who are most enterprising and sanguine, are limited in the extent of their business only by the extent of their capital, and the additions they can make to it by credits obtained at banks and otherwise. With any possible amount of banking capital, the demand for bank loans would be unlimited, and beyond what could be satisfied, except occasionally, for short periods, when credit has been extensively impaired by one of the periodical depressions of business occasioned by fluctuations in the currency. It will always happen that, on discount days at the banks, the amount of money applied for greatly exceeds the amount that can be properly loaned.

The managers of a bank ascertain from experience, that the aggregate amounts of the circulation and of the deposits of the bank, though constantly varying, are very seldom diminished below a certain average. Therefore they can usually loan with safety a portion of the funds derived from these two fluctuating sources. It is partly from the loans made of these funds that the profits are derived beyond the interest on the capital of the bank, to pay the current expenses, rent, salaries, State tax, and something more than simple interest to the stockholders. The great defect in this practice of banking is the inducement it holds out to the banks to increase, in every possible way, the amount of these fluctuating funds derived from the circulation and the deposits, and, upon the faith of their continuance, to loan as large an amount of them as possible. They are thus enabled at the same time to gratify the customers of the banks with liberal discounts, and the stockholders of the banks with large profits. But in doing this, they often encourage speculation and high prices at a time when, for the security of the banks and the protection of the public, they should be endeavoring to counteract them.

It is often the ease that the directors, who manage the banks, are among the largest borrowers of its funds. The speculation and high prices which they have encouraged, cause large importations, and consequently a demand for specie, which is sure to accompany or to follow a period of commercial excitement. The specie in the banks then rapidly diminishes. Every dollar that is paid in is required to meet the demands against the bank. All discounts are stopped, and the most rigid contraction of loans is necessary and unavoidable. It is at such a time, when the business community most need bank accommodations, that the funds derived from the circulation and the deposits are reduced to the lowest point, and that the loans, which have encouraged speculation and produced the high prices, must be paid back. No blame should be imputed to the banks, or to their directors, for the inconvenience and distress which this causes. They have consulted only the interests of the banks. In doing so, they were true to the system. But it is a defect in the system, that it should be for the interest of the banks to extend their loans, and that they should possess the greatest power to do so, at times when the public good would be promoted by reducing their loans. The interest of the banks is at variance with the public interest. The customers of the banks sustain the loss, whilst the banks have had the profit. At the same time, it must be admitted that the banks could not do otherwise for their own safety than to insist on the payment of all debts as they become due. The banks will presently be relieved by the sacrifices which their customers are obliged to make to meet their engagements under this evil and mistaken system.

Every business man who owes money to the banks, at those times when it is absolutely necessary for their safety to reduce their loans, should be ready to make every possible effort to fulfill his promises. To prevent the commencement and increase of any embarrassment, he ought to yield to the demands of money-lenders, whatever they may be, if it is necessary to enable him to protect his indorsers. When the crisis is past, it may be well for those business men who have survived it, to consider whether a system of banking, which actually induces such rapid contractions of currency, and such sudden convulsions of the money market, which baffles the prudence and foresight of all who use credit in their business, is in fact what it is often declared to be, "the most perfect system of currency and banking in the world." Should they seriously doubt the merit of "the system," they may wish to encourage some change that will render it better and more useful. Should they seriously desire a more rational and a more permanently prosperous business, and a currency more uniform and more stable, they may be willing to take the risk of ren-

Banks and harks are server interest and market a

Banks and bankers are convenient and useful, not only to merchants and traders, but to the public. In the minds of many, particularly in the New-England States, banks are so much associated with paper money, that it seems to them impossible that they should exist without it. The power to issue notes to be used for currency or money is not a necessary attribute of a bank; for banks exist in all com-

mercial countries, and perform all their useful functions as well, and perhaps better, without the power to issue their notes for money, because their action is then more uniform. If the right to issue notes to circulate for currency were taken away from every bank in the United States, the banks would be continued wherever they were really useful to the public, and would carry on the business of banking for proper business purposes, and not as mere traders in circulation. The effect of restricting their issues of notes would be to diminish the profits of the banks by reducing the amount of their The effect upon the currency would be, that the precious metals would supply the place of the bank-notes as they were withdrawn from circulation, and the currency would then afford a more permanent measure of value. The opportunities to loan money at exorbitant rates would not so constantly occur; but capitalists and the public would become accustomed to receive and to pay the lawful rates for the use of money, and would soon be well satisfied with the present legal rate of interest on loans and on their bank-stocks. We should then no longer hear of petitions for the repeal of the usury laws, which are now almost the only safeguard against the rapacity of money-lenders.

An excess of bank capital and of bank loans only stimulates trading and speculation. Such an excess is of no public benefit, though individuals may thereby enrich themselves. The effect of too much bank capital upon the industry of the country is injurious, by encouraging the investment of money in temporary loans for purposes of speculation, instead of inducing permanent and productive investments, such as the improvement of lands, the building of ships, railroads, manufactories, and other objects, which give employment to the industry of the country, and are the foundations of all useful trade. The object of banks should be to facilitate, by temporary loans, the distribution among the consumers of the products of industry; but those products are the results of more permanent investments of capital.

Another bad effect of an excess of bank capital is its tendency to concentrate the business of the community in the hands of a few large houses, whose wealth and character give them influence in the control of the loans of the banks, enabling them to monopolize many branches of business through the amount of money which they can temporarily control. The advantage of the possession of great wealth, particularly when it is united with the possession of intelligence and a general and well-deserved reputation for integrity, will always be as great as should belong to any private individuals. Surely, to the same individuals should not be granted in addition the advantages derived from the control of the banks, and the funds supplied by the paper money that is used for the currency of the country.

Currency or money, when it consists of the precious metals, is one of the items of the property of a country. But it is not property or wealth when it consists only of *promises* to pay money, unless such promises are the substitute and representative of coin or bullion that is actually held in reserve for the payment of such promises. It

is not true, when paper money is substituted for coined money, that the paper is so much additional capital to be invested for the benefit of domestic industry; but the reverse of it is true; for the only use that can be made of the coin is to send it abroad to pay for the products of foreign labor. It may increase, for a time, the amount of loans for purposes of speculation; but it will not increase the amount of capital that can be permanently invested for the benefit of industry.

With a paper currency, property may accumulate, but an accumulation of money is hardly possible. For bank-notes may be hoarded, or may be deposited in the banks; in the one case they would increase the circulation of the bank, and in the other case, the deposit of the bank; and in either case, the amount is loaned by the bank to be used by others. When deposits are demanded for any purpose by the owners, the bank must withdraw the amount from the use of those to whom they have loaned it. The advocates of paper money claim as its great advantage, that it leaves no money idle in the community; that there is no money that is not earning something, either for its owner, or for some one who knows better how to employ it. But more important questions are, the purpose for which the money is to be employed, and, is it true, to any great extent, that those who do not own money know better how to employ it than those who do own it? The owner, rather than allow it to remain for a long time idle and unproductive, will seek some useful and permanent mode of investing it. The temporary possessor of it by a loan from a bank may invest it in some speculation in stocks or in merchandise, which he forsees, or fancies, some one will need and be obliged to purchase of him at a higher price before he is required to pay back the loan. It is of no kind of importance or benefit to the public, whether the money during this time lies idle or not; but it is of importance, and a great benefit to individuals and to the public, that when any important public improvement is to be made, there should be capital unemployed that can be usefully and profitably invested.

So far as paper money is only a substitute and representative of the precious metals, its circulation can neither be of benefit to those who issue it, nor to the public who circulate it; except that it may be sometimes convenient to use, from the fact that it is more portable and more easily counted. The profit on the issue of paper money is derived from the amount of the excess of it that can be circulated beyond the amount of coin that must be kept on hand to meet the

demand for its redemption.

The object of laws to regulate banks which have the right to issue bills for currency is, to establish a system that will diminish the dangers, and avoid the evil effects of their imprudent or fraudulent management. Their paper, which circulates as money, is based on public confidence; and if that confidence should for any reason be impaired or withdrawn, there is great danger that the most prudently managed banks would be involved in the ruin which would be certain to fall upon those which had been conducted in a fraudulent or unskillful manner. To be convinced that there is danger of this, it is only

necessary to look at the annual reports of the condition of the banks. According to the report for 1854 of the condition of the banks in Massachusetts, their debts, including circulation, deposits, and balances due to other banks, amounted to over fifty-one millions of dollars, payable on demand, in specie, of which there was less than four millions in all the banks of the commonwealth.

If the public suffer by the insecurity of the bills in their possession because of bank failures, it is only on the amount of the bills which they happen to hold; but the inflations and contractions of the currency affect the whole property of the community. An inflation of the currency, and the consequent rise of prices, suddenly enriches those who hold large amounts of property; and on the other hand, a contraction of the currency, and the consequent fall in the value of property, often renders them bankrupt. Mr. Webster says: "Do these violent fluctuations of currency do good to him who depends upon his daily labor for his daily bread? They may gratify the greediness for sudden gain, or the rashness of sudden speculation, but they can bring nothing but injury and distress to the homes of patient industry and honest labor. Who are they that profit by this state of things? They are not the many, but the few; they are the speculators, brokers, dealers in money, and lenders of money at exorbitant interest." An increase of the amount of money in circulation, by the increase of prices which it produces, may stimulate production; and if it is an increase of real money, this effect may be of a permanent character, and advantageous to the community. But if it is only an increase of paper money, its effects are usually sudden and rapid. Before any benefit can be derived from the enterprise which it has stimulated, a contraction of the currency too often occurs, entailing loss and perhaps bankruptcy on those who have been tempted into new adventures. Any benefit that may result from such a course of business is reaped by money-lenders.

ARE BANK-BILLS MONEY?—The question whether bank-bills are money has been recently decided in the negative by the Chatham Superior Court of Georgia. The case was that of the State vs. Russell M. Tuttle, charged with swindling S. A. Griggs out of \$600, in February last, and took place Saturday, before the Superior Court of Chatham county, Judge Fleming presiding.

It was stated, that S. A. Griggs, a drover from Kentucky, was cheated out of \$600, by a brace of sharpers, by means of the patent safe game. The indictment charged the prisoner with having swindled S. A. Griggs out of \$600 in money. The counsel for the prisoner asked the Court to instruct the jury, that bank-bills were not comprehended in the term money, but that money meant only coin, which instruction the Court (counsel having been heard on both sides) gave; and the evidence having shown it was bank-bills that the prisoner received, he was found not guilty.

If decisions of this kind were confirmed by the higher courts, they would seriously interfere with commercial transactions. The decisions in the New-York courts, are fully to the effect, that bank-bills are money. Chancellor Walworth, in the Court of Errors, said that "bank-bills are, by common consent, treated as money, and are constantly passed from hand to hand as such." The principle of considering bank-bills as money, which the receiver is to take at his own risk, can not be carried any further than the conventional regulation extends—that is, to consider and treat them as money, so long as the bank by which they are issued, continues to redeem them in specie, and no longer.

## SPECIMENS OF ENGLISH BANKING.

From the London Times, July 5.

In consequence of the startling failures which have recently taken place, a suggestion has been thrown out that a solemn inquiry should be instituted before a committee of the House of Commons as to the general system upon which commercial affairs are conducted by the trading community. We have no great belief that the evils which are acknowledged to exist are within the reach of legislation. Who shall circumscribe the scope of credit? Who shall say to the merchant, the bill-broker, or the banker, that positive law shall prohibit dealings from which they should in reason be deterred by the most ordinary dietates of prudence? We do not, however, imagine that the persons who have been struck by the magnitude of the evil aim so much at prohibition as exposure. But who is to aid in the exposure?—the persons who profit by, or, at least, acquiesce in the system? From them, at least, no trustworthy evidence is to be expected; and, indeed, the subject is so encompassed with difficulties that we can scarcely indulge a hope that the inquiry suggested would be attended with any beneficial result. If public discussion of the more flagrant cases which from time to time are brought before the commercial or criminal tribunals will not avail, neither is much to be expeeted from a more formal investigation, which would invite, without compelling, disclosure upon transactions of the most private and delicate nature, involving the failure of many a desperate enterprise which depends upon secresy as its sole chance of success. Until we can see our way clearer through this entangled maze we feel it the safer course to point to the records of the tribunals for evidence of the unsound basis upon which a large portion of the mercantile community rests their dealings. It is easier to signalize the evil than to suggest the remedy; but the evil undoubtedly is, that undue facilities for credit are given by houses which ought to be perfectly acquainted with the private circumstances of every establishment which applies to them for accommodation. Their only thought, however, seems to be, "Are we secure ourselves?" So that they can answer this question in the affirmative they seem not at all concerned to prevent the terrible consequences which the extension of their assistance to speculators or bankrupt concerns may entail upon others. They will look keenly enough into the validity of the securities placed before them, but there their inquiries seem to stop short.

We have been led to this subject by the revelations which have been made in the hideous case of Strahan & Paul, now under investigation at Bow street as well as the Bankruptcy Court. Yesterday, Sir John Paul and Messrs. Strahan and Bates were again placed in the dock before the sitting magistrate, and Mr. Bodkin, for the prosecution, proceeded with such evidence as he had been able to procure since the last adjournment. The principal feature of this was the

negotiation of a loan for £27,000, by Paul, in April last, with the house of Messrs. Overend & Gurney. This transaction may be taken as a fair sample of the kind of trading we have already pointed out. We think it is tainted with many marks which would have aroused suspicion in minds generally less acute than those of the gentlemen who manage the business of the firm who made the loan. We certainly cannot lay claim to the vast commercial experience of Messrs. Overend & Gurney, but we should have imagined that the mere fact of a banker presenting himself with a pressing request for accommodation to so considerable an amount should have necessitated very searching inquiry. There are times, of course, when a panic takes place in the money market—times of reaction from mad speculation and commercial mania—when the fairest trader may be hardly pressed to realize securities of unquestionable value; but last April was not such a season as this. Messrs. Overend & Gurney appear to have felt a certain degree of suspicion, but their suspicions were very lightly allayed. The loan was negotiated through Mr. George Young, a solicitor in Sise-lane. Paul required, at first, a loan of £30,000, and for this he tendered a parcel of Dutch and Danish Overend & Gurney refused to advance more than £27,000 on the securities offered, and this smaller amount was greedily caught at by the embarrassed banker. It was then that the money-dealers asked to be informed of the name of the real borrower. and were content with the slender satisfaction to be picked out of the note contained in the following extract from evidence:

"MY DEAR FRIEND: You will greatly oblige me by raising as much money as you can upon the securities I handed to you, for 3 months, 'pending the purchase of an estate. You know the purpose for which the money is required, and also my reason for my name not appearing in the matter.'

"Yours faithfully,

J. D. PAUL."

DECIMAL COINAGE.—From the statements of the government, there is every reason to believe the decimal coinage question will be impartially considered. correspondent on Thursday pointed out that Lord Monteagle, having figured as a member of the Decimal Association, the object of which is, not to aid inquiry, but to promote one form of decimal currency, which would necessitate an entire alteration of the existing copper coinage, could not be considered free from bias, and that the Bank of England having granted £100 to that Association while Mr. Hubbard was Governor, there was some slight ground for a similar presumption in the case of that gentleman. It seemed, therefore, as if a majority of the commission, which consists only of three members, had been chosen without sufficient care. The Chancellor of the Exchequer, however, from his reply, just given, to a question on this point, is evidently desirous that the inquiry should be in every respect a full and fair one, and it is right to assume that with this feeling he satisfied himself, before nominating the commission, that each of the persons selected was pre-pared to enter upon it without prejudice. The explanation of Lord Monteagle's connection with the Decimal Association, as well as of the bank donation, consists most likely in their having originally supposed it to have been instituted for the simple purpose of advocating the decimal principle, and of discussing every method that might appear best calculated to facilitate its early adoption.—The Times.

### THE NEW-YORK STATE CLEARING-HOUSE.

The following is the plan proposed by a portion of the New-York country banks for their Clearing-House in this city, August 7, 1855:

#### ARTICLES OF ASSOCIATION.

The several incorporated banks, banking associations, and private bankers of the State of New-York, who shall execute this instrument in the manner hereinafter mentioned, hereby associate together for the purpose of establishing in the city of New-York a common agency for the redemption of their circulating notes, and also the circulating notes of other incorporated banks, banking associations, and individual bankers, pursuant to the provisions of the 8th section of the act of the Legislature of the State of New-York, entitled, "An act relating to the redemption of bank notes," passed May 4, 1840, under the following rules and regulations:

1. The Association shall be known as "The New-York Country

Bank Exchange."

2. The agency shall receive all the circulating notes of country banks in good credit, which shall be sent to it by any associate, at the legal discount of one quarter of one per cent. The circulating notes of each member of the association, which shall be forwarded to the agency, or otherwise redeemed by it, shall be duly assorted and returned to the bank issuing the same, at a discount of one fifth of one per cent. Exchanges shall be made and the balances settled and paid daily. The balances due from debtor banks, shall be paid by them, through the bank in the city of New-York, with which they shall respectively keep their account, on the draft or requisition of the manager of the agency, and the balances due to the creditor banks shall in like manner be paid by the manager to their credit respectively, in such bank in said city as they shall designate.

3. The Association shall be in no way responsible for the exchanges, nor for the balances resulting therefrom, except so far as such balances shall have actually been paid into the hands of the manager; and in such case the responsibility of the Association shall be limited to the distribution by the manager to the creditor banks of the sums received by him; and should any loss occur while said balances are in the hands of the manager, it shall be a charge only upon the specific fund hereafter provided, to be placed in the charge of the manager.

4. Each member of the association shall appoint the manager thereof, its legal agent for the redemption of its circulating notes as re-

quired by law.

5. For the purpose of redeeming such circulating notes as shall be offered at the agency, otherwise than through the associated banks, each bank or individual banker, on becoming a member of the Association, shall deposit with the manager the sum of two thousand dollars, and in case its circulation received from the Bank Department, or

which it shall be authorized to issue, shall exceed one hundred thousand dollars, then such deposit shall be equal to two per cent upon such circulation; which sum shall remain on deposit with the Association unimpaired, so long as the bank or banker depositing the same shall continue a member thereof, and shall be returned on withdrawing therefrom, subject, however, to any indebtedness of such bank or banker to the Association, and to its liability for its proportion of the losses or expenses thereof.

6. In case the expenses of the Association shall exceed its income from its business, such expenses shall be apportioned by the Executive Committee, and paid by the associates quarterly, in proportion to the

amount of redemptions made by them respectively.

7. Each bank belonging to the Association may be represented at all meetings by one or more of its principal officers, but shall be entitled to but one vote.

- 8. A meeting of the Association shall be held at the office of the Association on the second Wednesday of May in each year, at which meeting a president shall be elected by ballot. Special meetings may be called by the executive committee at their discretion, and shall be called by them on the written request of any five of the associates. Representatives from fifteen banks shall at all times constitute a quorum.
- 9. At every annual meeting a standing committee of five bank officers shall be elected by ballot, as an executive committee, whose duty it shall be to act as a board of directors of the Association, with power to procure from time to time suitable rooms for the transaction of the business of the Association; to provide whatever may be necessary for the use of the agency; to appoint and remove all officers, clerks, or other persons employed, (except the manager); to fix their salaries, apportion and draw for the expenses, establish rules and regulations for the conduct and management of the business, in all cases not herein provided for, and generally to direct the affairs of the agency.

10. The manager shall be appointed and his salary fixed by the Association. He shall give security, to be approved by the executive committee, in the sum of fifty thousand dollars, for the faithful discharge of his duties, and each clerk shall give like security in the sum

of ten thousand dollars.

- 11. The manager, under the direction of the executive committee, shall have charge of all business at the agency, so far as relates to the manner in which it shall be conducted, and all the clerks shall be under his direction. He shall have power to suspend any clerk or other person employed, for cause, and shall report such suspension, and the reason of it, to the executive committee. He shall act as secretary at all meetings of the Association and of the executive committee.
- 12. The executive committee shall have power to suspend the manager, whenever, in their opinion, the interests of the Association shall require it. Upon such suspension being made, the committee shall immediately call a meeting of the Association, and report the

cause of such suspension, when final action shall be taken by the Association.

- 13. In case any associate shall neglect or refuse to provide for the payment of any balance against such associate, arising from the exchanges, the manager may thereupon, in his discretion, return the circulating notes of the defaulting bank constituting such balance, to the bank or banks from which the same were received, and in the same proportion as sent by them, first causing each parcel of said notes so returned to be duly protested. The bank so in default shall thereupon be suspended from the Association by the executive committee, (or in their absence by the manager,) until the final determination of the Association in the matter at a meeting to be called as soon as practicable thereafter.
- 14. The executive committee shall designate a bank or banks in the city of New-York, in which all drafts drawn for balances shall be deposited and the funds of the Association kept.
- 15. New members may be admitted into the Association at any time, with the assent of the executive committee; such new members paying an admission fee, to be fixed by the executive committee, making the deposit hereinbefore mentioned, and signifying their assent to these articles, in the same manner as the original members.
- 16. For cause deemed sufficient by the Association at any meeting thereof, any bank may be expelled from the Association, provided a majority of the whole number of associated banks shall vote in favor thereof.
- 17. Any member of the Association may withdraw therefrom at any annual meeting, on giving thirty days' previous notice of his intention to withdraw to the executive committee—first paying its due proportion of all expenses, liabilities, and losses, if any.
- 18. For the purpose of organization, and until the first annual meeting shall be held, George W. Cuyler, of Palmyra, in the county of Wayne, shall be the Manager of the Association, at an annual salary of five thousand dollars; and George II. Mumford, of Rochester, George W. Tifft, of Buffalo, Edward B. Judson, and Hamilton White, of Syracuse, Josiah N. Starin, of Auburn, Solon D. Hungerford, of Adams, and William R. Osborne, of Binghamton, shall constitute the Executive Committee
- 19. These articles shall be submitted to the several banks and individual bankers of the State whose notes are not redeemed at par in the cities of New-York, Albany, or Troy, for their approval and adoption. When approved by the boards of directors of the incorporated banks or banking associations, or by individual bankers, such approval shall be signified by the signatures thereto, of the president, cashier, or financial officer of the bank or institution adopting the same. When fifty banks shall have adopted these articles, the agency may be put in operation.
- 20. Amendments of these articles may be made at any meeting of the Association, by a vote of two thirds of all the members present, being not less than a majority of all the members belonging to the Association.

# THE TONTINE BUILDING, NEW-YORK.

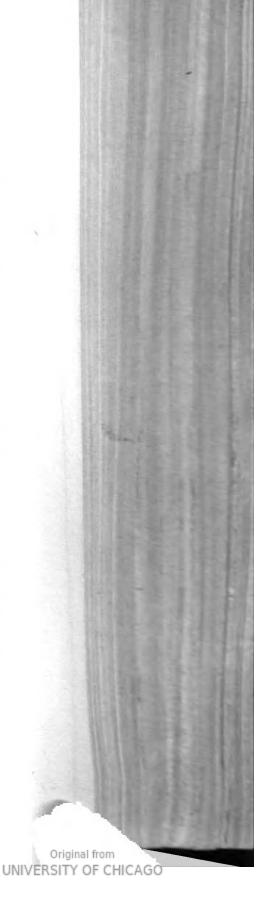

THE OLD TONTINE BUILDING, CORNER OF WALL AND WATER STREETS, NEW-YORK.

The interest that is felt at present in this relic of the olden time, now that it is removed, warrants the republication of the following article, (altered to meet existing circumstances,) furnished by Frederic De Peyster, Esq., Chairman of the Committee who managed its affairs, to Valentine's Manual of the Corporation of New-York, for 1852:

"This edifice stands on the north-west corner of Wall and Water streets, in this city. It was commenced in or about 1792, by an Association of merchants, and completed in or about 1794, for the purpose of providing suitable accommodation for the common convenience, and centre for the daily intercourse, of the mercantile community. By the constitution under which such Association was formed, 203 shares were subscribed for at \$200 a share, severally depending upon a life selected by each subscriber, who stated, in the memorandum accompanying such subscription, the age, sex, and parentage of the respective nominees, during whose natural existence he was to receive his equal proportion of the net income of the establishment.

"Upon the death of the nominee, the subscriber's interest ceased, and this interest became thereby merged in the owners of the surviving nominees. The original shares were assignable, and held as personal estate, and the whole property was vested in five trustees, who were to be continued in the manner pointed out in the above constitution, and who were to hold the same until the number of such nominees was reduced to seven, when the holders of the shares, contingent upon these surviving nominees, became entitled to a conveyance in fee

by the trustees of the entire premises, to be equally divided between them.

"The nominee himself did not, as such, have an interest in the Association; for each subscriber, in naming some person—generally a child—looked to such as had the promise of 'length of days.'

"The plan of this Association originated from the scheme of Lorenzi Tonti, a Neapolitan, who introduced it into France in 1653, under Louis XIV., and hence the word *Tontine* came to designate 'a loan advanced by a number of associated capitalists for life annuities, with benefit of survivorship.'

"There is, however, a distinction between the present plan and the scheme of *Tonti*. His intent was the establishment of a company who should each contribute a like amount of capital, to be loaned to a responsible party, at a certain rate of interest, which was to be divided equally between the members of the same age; but where there was a diversity of age, according to a fixed ratio, the elder received more and the younger less. As the members died off, the survivors absorbed their respective interests, and when the last survivor died, the borrower took the whole capital.

"But in the plan of this Tontine Association, the owners of the seven surviving shares, depending upon a like number of lives, take the whole property in equal proportion to their surviving nominees; and, as in this case, one hundred and forty-nine of the nominees are now dead, who represented corresponding interests upon their selection by different subscribers, the remaining shares are now respectively represented by, and depending upon, a like number of lives, which, in May, 1855, was reduced to fifty-one.

"The above constitution bears date on the 4th of June, 1794, but the nominations by the subscribers were not wholly completed until March, 1795. The Association, in their preamble, named the building the Tontine Coffee-House, and it was thereby directed to be kept and used as a coffee-house. But on the opening of the Exchange, a little higher up in Wall street, the interests of the shareholders demanding a change in this special appropriation, they applied to the Court of Chancery for permission to let the premises for general purposes, and by its decree in 1834, the above restrictions were

"Subsequently, doubts having arisen respecting the validity of the trusts under which the trustees took and held the property, in consequence of the Revised Statutes on the subject, the Legislature, in 1843, passed an act confirming the same, and altered the name to the Tontine Building, and directed that the management of the affairs of the concern be by 'The Committee of the Tontine Building,' who receive, beside their other duties, the income of the establishment, and divide the net proceeds on the second Tuesday in each month of May among the owners of the shares, depending on the nominees alive on the previous first day of the same month.

"This Association, on the 4th of June, 1855, will have existed sixty-one years. In examining the statistics in reference to the successive diminution of shares by death, the interesting fact is disclosed

that the lapse of shares, from year to year, is in proportion, with slight variation, to the relative number of both males and females.\* The existence of so many of the nominees, after such a lapse of time, is admitted by the compilers of annuity tables, here and abroad, to be very unusual, if not unprecedented; but it should be recollected that the nominees originally selected were children of persons in easy circumstances, and that these were not, in general, subjected to the exposure and privations incident to the masses, the average of whose lives forms the basis of the usual calculations on this subject.

"We give the following as births of the several nominees at the date of the constitution, in 1794:

| Born in | Males. | Females. | Born in | Males. | Females. |
|---------|--------|----------|---------|--------|----------|
| 1752,   | 1      |          | 1781,   | 3      | 1        |
| 1757,   |        |          | 1782,   | 4      | 4        |
| 1759,   |        | 1        | 1783,   | 5      | 5        |
| 1761,   |        |          | 1784,   | 8      | 3        |
| 1763,   |        | 1        | 1785,   | 11     | +7       |
| 1764,   | +1     |          | 1786,   | 11     | +4       |
| 1766,   |        |          | 1787,   | 10     | 5        |
| 1767,   | 1      |          | 1788,   | 12     | 5        |

| 1785,   |        | 3        |         | 30     | 21       |

"A calculation made by Mr. De Peyster, in 1839, of the probable existence of ninety-three nominees then in being, based upon the different tabular precedents recognized here and in England, as authoritative, led him to the conclusion that this number would, in or about 1874, be reduced to seven, when the trust would terminate, and the

† Lives duplicated.

<sup>\* &</sup>quot;In 1794, the proportion of females to males was forty-seven per cent—not one half; in 1855, the proportion of females to males is seventy per cent, approximating to three fourths the number."

property be conveyed to the owners of the seven shares depending upon the surviving lives.

"From an interesting article on the subject of this Association, in the Journal of Commerce, we make the following extract, which conforms to present statistics:

the chief centre of the commercial interests, who can not recall scenes within its walls "the like whereof we ne'er shall see again." A public meeting convened within its roof, sent forth a decision which was almost universally respected. As a single instance of this, let us turn back for forty years, when the habit of distributing expensive searfs to bearers and others at ordinary funerals was so prevalent, that many poor families were sorely pinched to provide this necessary mark of respect for a departed relative. Some benevolent individuals, seeing the evil influence of such a fashion, called a meeting at the Coffee-House, when nearly two hundred of those whose weight of character gave force to their decisions, signed a pledge to abstain from the custom of distributing searfs, except to the attendant ministers and physicians. This was the death-knell of the oppressive fashion. In matters of more vital moment, when great public interests were at stake, a voice has gone out from the said Coffee-House, which, like a recent echo from Castle-Garden, has been heard throughout the length and breadth of the land. Some of the noblest charities too which the world has ever witnessed, received their first contributions behind this time-hallowed roof.

"But the history of this organization is highly instructing in another point of view. The longevity of the nominees has been remarkable, we believe, beyond any similar experiment of the kind ever witnessed. It is true that the circumstances under which their names were selected, would naturally lead us to expect for them a longer average period of existence, but this average has been so far extended as to be quite extraordinary. Of the 203, whose names were handed in about sixty-one years ago, fifty-one still survive! Of these, the youngest is about sixty-two and the oldest eighty-three. This is about one third greater longevity than the average of European estimates. Only three of the nominees died in 1854, or one in every eighteen, which, considering their average age, was very remarkable. In this connection, we may digress for a moment to speak of the greater age which a majority of people in easy circumstances throughout this State attain, as compared with those of other countries. About fifteen years ago, a gentleman, then President of the New-York Life Insurance and Trust Company, wishing to ascertain some particulars upon which to base calculations for a sale rate of premiums for life insurance, addressed five thousand circulars, with tabular forms annexed, to as many different families, asking that the tables be filled and returned to him. Of these about three thousand were returned completed, showing an average longevity greater than was ever before exhibited in any actual compilation since "the days of man were shortened." Unfortunately, the papers have not been preserved; but they were forwarded to London at the time they were first recorded, and excited universal astonishment. It is easy to see that, from the character of those who would answer the circular, the families must be selected from among those whose circumstances were most favorable to longevity; but they embraced all professions and occupations, and bore the marks of great care in preparation.

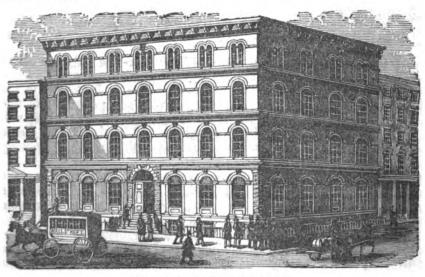

"The subscribers who originated the scheme, and their companions of those days, have left to their successors, however, a better legacy than the old Coffee-House—a name for integrity and probity—an example of industry, liberality, and promise-keeping, which cannot be valued too highly. May their spirits never be wanting in those who bear the enviable name of New-York merchants, which they render so illustrious.

"The lithographic view which accompanied the article in the Manual, of this interesting old building, (taken in 1797,) which is said to

be nearly the only one left standing in Wall street, erected during the last century, will present, to many, reminiscences connected with this busy thoroughfare, like those associated with the pleasant faces of long-absent periods, again returned to greet us with their welcomes and their smiles. Here, it is said, died the renowned Cook—that eminent tragedian, whose delineation of the tragic muse in his day was without competition—surrounded by many of his contemporaries, patrons of the house, who continued with him in that last act in the drama of his eventful life. Hither men from every section of the country were attracted by his reputation, and they regarded a visit to the Tontine, in those days, as essential to the comforts and agreeability of their temporary sojourn in this city.

"Mark, now, the changes which a few short years have produced in this growing and populous metropolis. The spirit of the age is seen in the breathings of the iron horse, and in the glowing movements of the wonder-working Press. Here, night and day, George F. Nesbitt & Co., from their extensive Steam Printing and Stationery establishment, supply the wants of this vast commercial community with promptitude and dispatch, and have added to the renown of this relic of a past age, by their well-appointed, efficient, and thoroughly-established printing-house, which transmits, through the commercial houses of this city and elsewhere, information connected with the trade, the resources, the supplies, and the wants of almost every part of the

habitable globe."

THE NEW TONTINE BUILDING.

By the provisions of the Constitution of this Association, the committee elected to manage the property are authorized to execute a lease or leases thereof, to be confirmed, when necessary, by the trustees in whom the fee is vested. If, at any time, doubts were entertained that, by the Revised Statutes, the trusts in question conflicted

with the provisions therein applicable to this matter, these were silenced by the Act of the Legislature, which confirmed these trusts.

The following list of the surviving nominees, is taken from the Home Journal:

| Survivors.             | When Born. Survivors.       | When Born. |
|------------------------|-----------------------------|------------|
| Richard D. Arden       | 1777 John V. Van Tyle,      | 1783       |
| Peter P. Allairo       | 1787 G. C. Verplanck,       | 1786       |
|                        | 1774 Gabriel Winter,        |            |
| G. H. Broome,          | 1779 John S. Winthrop,      | 1785       |
| Robert Benson, Jr      | 1785 FEMALES.               |            |
| William Bayard         | 1791 Amelia Livingston,     | 1772       |
| John Constable,        | 1788 Maria Livingston,      |            |
| John D. De Wint,       | 1787 F. Buchanan Gilford,   |            |
| W. C. T. Greenleaf,    | 1790 Sarah Wilkinson,       | 1782       |
| Daniel M. Hothman      | 1791 Caroline Broome,       | 1783       |
|                        | 1793 Sarah Roberts,         |            |
|                        | 1791 Maria Laight,          |            |
|                        | 1784 Frances C. Livingston, |            |
| Governeur Kemble,      | 1786 Eliza S. Lenox,        |            |
| John A. King,          | 1788 Alice L. Shaw,         | 1785       |
| Charles King,          | 1789 Eliza Wilmerding       | 1786       |
| James Kegan.,          | 1791 Eliza Livingston,      | 1786       |
| Harman Leroy,          | 1791 Ann Lawrence,          |            |
| P. V. Brush Livingston | 1793 Mary Lawrence,         |            |
| Wm. H. Maxwell         | 1788 Maria Bayard           | 1788       |
| Lewis Mark             | 1788 Maria Fowler,          | 1788       |
| B. W. Rogers,          | 1775 Mary Ray               | 1790       |
| Horatio Gates Stevens, | 1780 Emily S. Webster,      | 1790       |
| Samuel W. Seaton,      | 1789 Anna M. Clarkson,      | 1792       |
| Matthew Seeley,        | 1789 Catharine J. Carman,   | 1792       |
|                        | 1789 Mary Ann Verplanck,    |            |

Every vestige of this time-honored landmark—the only one of the last century now remaining in Wall street—is removed, and its place supplied with a more grand and costly edifice, in keeping with the spirit of the age, and with the growing wealth and prosperity of this great city. It will be but one of the many improvements which will always make that memorable thoroughfare, and its vicinity, the centre of the commercial and monetary business of this great and growing Republic.

Much has been said by the press, and great efforts have been made by speculators, from interested motives, to spread business over a greater area, but it can never be accomplished, only so far as pressing necessity forces it, street by street, as one after another enters the mercantile or commercial arena. The disadvantages of business of various kinds, intimately connected, spread over a wide surface, is so distinctly understood by country merchants, and small dealers in our own city, that it will ever be hugged in as close a compass as possible, Many who have tried the experiment of locating on the outer edge of the business circle, are now seriously thinking of returning to their old quarters again. Wall street must continue to be the street where the moneyed interests of this vast country are centred; and Pearl and Water, and Beaver and Broad, and the streets crossing and running parallel, will continue to represent the mercantile and commercial

interests, notwithstanding the temporary removal of some of the prominent firms within the last few years. Pearl street is beginning already to assume its wonted vigor, and but a few years will have elapsed when it will be counted again among the first commercial streets in the city; all that is necessary now is the erection of some commodious buildings, adapted to the requirements of trade, and new life and energy will be infused into it. The right spirit among property-holders will soon accomplish this. The recent dressing-up of a few of the old landmarks has already changed the dull aspect of the street to an active, lively air. The Haggerty Building, 167 and 169 Pearl street, corner of Pine, once familiar to the public as the Auction-house of the well-known and much-esteemed John Haggerty, has undergone a material change in this respect; it has been completely renovated, and is no longer the auction-house it was a few years ago. Messrs. Nesbitt & Co. have removed from their old stand, the Tontine Buildings, and now occupy the entire of these premises, corner of Pearl and Pine streets, for their Printing and Stationery business.

### COINS, COINAGE, AND BULLION.

#### I. THE NEW-JERSEY HORSE HEAD COINS.

Communicated to the Editor of the Newark Daily Advertiser.

THE New-Jersey Historical Society having taken up for investigation the subject of the copper coinage of the State, made and issued previous to the organization of the National Mint, a few points in regard to the history of these coins may not be altogether without interest to the public. During the year 1786, a proposal was made to the Legislature of the State of New-Jersey, then in session, by Walter Mould, Thomas Goadsby, and Albian Cox, for authority to coin a certain sum in copper. The proposals were referred to a committee, of whom Abraham Clark was chairman, who, after having had a conference with the petitioners upon the subject, made a report favorable to the objects of the petition. Accordingly, on the 1st of June following, an act was passed by the Legislature authorizing the parties to strike copper coin to the amount in value of £10,000, at the rate of 15 coppers to a shilling, each coin to be of pure copper, to be of the weight of six pennyweights and six grains each, to be manufactured in the State, and to have such marks and inscriptions as should be directed by the Justices of the Supreme Court, or any one of them. The contractors, before proceeding upon the business of coining, were moreover to enter into bonds to the Governor, to the use of the State, in the sum of £10,000, with at least two sufficient sureties, that they should, within two years from the publication of

the act, coin the full sum of £10,000 in copper, and faithfully and honestly perform their contract. They were also to deliver to the Tressurer of the State, for the use of the State, one tenth part of the full sum so struck by them, which amount was to be paid quarterly, and they were likewise required to account to the Legislature for the faithful execution of the trust reposed in them.

On the 22d day of November of the same year, a supplemental act was passed, in the preamble to which, after setting forth that the good intentions of the people of the State were likely to be defeated by the circumstance of the parties being jointly bound to execute the contract, Thomas Goadsby and Albian Cox were authorized to coin two thirds of the amount of £10,000, and Walter Mould the remainder, and in case of any neglect or refusal on the part of Mr. Mould to comply with the conditions and enter upon the performance of his part of the coining, within two months from the date of the passage of the act, then the whole amount of the coinage was to be carried on by the other parties, any neglect on the part of either party to give the required bond rendering him liable to forfeit and pay the same sum, to be recovered in the same manner, that other persons were made liable to pay for striking or coining coppers by the previous

The Legislature, desiring to protect the contractors in their operations as far as possible, it was still farther enacted on the fourth day of June, 1787, that a penalty of ten times the nominal value of the sum or sums so offered in payment should be imposed upon any person or persons who offered to pass in payment or exchange, any coppers other than those coined under and by the authority of the acts subsequently passed by the Legislature of the State, or any which might be issued under the anthority of the government of the United States. Albian Cox and Walter Mould, two of the contractors for the striking of these coins, were merchants in the city of New-York, the former carrying on business at No. 240 Queen street, and the latter at No. 23 William street, and were each of them men of stand-

ing and responsibility.

The coins bear upon the obverse, a heart-shaped shield, with strips running perpendicularly, with the legend "E Pluribus Unum" - on the reverse, a plough, surmounted by a horse's head, and bearing the legend "Nova Casarea," with the date in exergue. There are quite a variety of these coppers, which were coined for three successive years, and they bear the dates of 1786, 1787, and 1788, respectively. Of sixty specimens of these coins, which I have taken indiscriminately from a number in my cabinet, I find the troy weight of the lightest to be 4 dwt. 19 grs., the heaviest 6 dwt. 17½ grs.—the gross weight 1 lb. 6 oz. 10 dwt. and 141 grs., and the average weight of each coin a fraction over 6 dwt. Some of these coins was made at Morristown, but it is more than probable that there were two separate mint

houses.

# II. THE NEW FRENCH SILVER.

The public have been interested latterly by statements respecting a new method of obtaining in large quantities, from that most abundant of deposits, common clay, a metal which rivals silver in beauty, and surpasses it in durability, not to mention other qualities. The discoverer—for so we must call him—is Mr. Sainte-Claire Deville. Aluminium, which hitherto existed only in very small quantities, and was esteemed rather as a curiosity, can now be produced in masses sufficient and cheap enough to replace copper, and even iron in many respects; and thus place the "new silver," superior in some points to the real article, in such common use as to suit the means of the poorest persons.

It is by triumphs like these, which illustrate modern science, that the luxuries as well as the comforts of life are coming within the reach of all. It is by such discoveries—fruits of scientific research, which are universal in their application or results—that humanity is benefited, and surely though slowly raised out of the ugliness and roughness of material wants. It is thus that the mind is civilized, by acquiring a taste for the useful and beautiful of a higher order, and that more progress is made by material and external changes upon the mind than can be accomplished during centuries by preaching and denunciations. Let us hail, then, every such discovery as a blessing, and every discoverer as the true, disinterested friend of humanity.

We learn from Paris, that the members of the Academy of Sciences and the numerous auditory were loud in their admiration and surprise at the beauty and brilliancy of many ingots of aluminium presented by Mr. Dumas, the celebrated chemist. It was impossible to believe they were not silver until taken into the hand, when their extraordinary lightness at once proved the contrary. That a metal

should weigh so little seemed almost incredible.

The price of aluminum a short time since in France was about the rate of gold! Mr. Dumas assured the Academy that, owing to recent discoveries reducing the expense of extracting it, the cost of production was now about one hundred times less; and Mr. Balard, another member, stated that there was little doubt that the effect of competition in its manufacture, together with the advantage of throwing it open to the industrial resources of the world, would be to reduce the price as low as five francs the kilogramme, or about forty cents a pound.

This important result is mainly attributable to the facility with which we are now able to produre pure sodium in abundance, which is the active agent for the revivification of aluminium, and which was at one time very expensive. Sodium is obtained by the decomposition of carbonate of soda by charcoal. By the aid of a little lime it has been found easier to separate it from oxygen. The conversion of aluminous earth or clay into chloride of aluminium takes place so easily that the price of the chloride only comes to about ten cents a pound.

Mr. Dumas observed, that the generalization of the procedure of Mr. Deville, the application of chlorine to the extraction of metals,

forms a new era in metallurgy.

Among the many remarkable qualities of aluminium, such as its resistance to oxydation, either in the air or by acids, its hardness, its

wonderful lightness, its malleableness, the facility of moulding it, etc., Mr. Dumas mentions another, its sonority. An ingot was suspended by a string, and, being lightly struck, emitted the finest tones, such as are obtained only by a combination of the best metals.

### III. SILVER ORE.

We saw to-day, at the office of Messrs. Mosquera & Co., Broadway, a solid mass of silver ore, received by the steamer George Law, (the product of one mine on the Isthmus,) weighing 25 pounds, and of the supposed value of \$3000. It is to be coined here.

It is very curious that silver is becoming abundant, and that at the Mint in Philadelphia, it is now paid out freely at rates equivalent to

\$1.20 per ounce.

No doubt but, that when we have a regular communication with New-Granada, by steam, the world will be astounded with the results of a newly-directed industry, of an American character, throwing, possibly, California and Australia into the shade.

This mass of silver was, in shape, the half of a cylinder, whose length was about two feet, and diameter one foot. It had a rough exterior, and looked like a piece of wood with the bark on, only that

it was of pure silver .- New-York Express, July 28.

PROCMEDINGS OF THE NUMISMATIC SOCIETY, London, May 24 .-Dr. Lee, LL.D., in the chair.—Mr. Evans read a paper "On some rare and unpublished British Coins." Among these were specimens of those which have the legends of Commios, tin, tinc, etc., on their reverses. Mr. Evans conjectures that these represent the Latinized form of the name of the British Prince who struck them. Other coins of the same class exist which read on the obverse com. r., and on the reverse, TIN. This would seem to refer to a son of the former ruler. Mr. Vaux read a paper "On some curious Coins lately acquired by the British Museum." Among these were some rare and unpublished specimens of Apodacus and Kamnaseires, kings, it is believed, of Characene, and of Molon, satrap of Media: for the former, the national collection is indebted to Mr. Olguin; for the latter, to Col. Rawlinson. Mr. Vaux observed, that the coin of Kamnascires had been originally read, by Col. Leake, Kapnascires; but a careful examination of the two specimens clearly showed that the third letter was not an M, and not a r. Mr. Vaux also noticed some new types of the class now called Sub-Parthian. Mr. Pfister exhibited a fine medal of Erasmus, made by the celebrated artist Quintin Matsys; and stated a fact, not generally known, that the same artist made the tomb of Edward the Fourth, now in St. George's Chapel, Windsor.—Athenaum.

PROCEEDINGS OF BRITISH ARCHEOLOGICAL ASSOCIATION, June 13. T. J. Pettigrew, V. P., in the chair.—Mr. Crafter exhibited a gold coin, the obverse presenting a figure of St. John the Baptist, with his leathern girdle and cloak of camel's hair, preaching and holding up the cross; the reverse a fleur-de-lis. This was lately obtained from Hastings. The Florentines were among the first people of Europe to revive the use of gold as a circulating medium. In the middle of the

thirteenth century, to which this specimen is to be referred, they issued these pieces with the legend s. IOHANNES. B; and on the other side, with the fleur-de-lis, florentia. These beautiful coins were called Florins—a name now most absurdly bestowed on our twoshilling pieces.—Sir S. Morton Peto exhibited two British Cleddyrs, leaf-shaped swords, in bronze, obtained at Washingborough, in Lincolnshire, near the river Witham, in the neighborhood of which a conflict had taken place, and whence the celebrated British shield in the Meyrick Collection was obtained. A third specimen (we believe from the Thames) was also exhibited by Sir S. M. Peto, the handle of which was peculiar, having a long, narrow, ovate slit down the centre of the tang, and one on each side of the lower part where it joins the blade. It measured 1 ft. 10 in. in length. Sir S. M. Peto also exhibited two Roman vessels—one an Olla, or cinerary urn, 9 in. high; the other a Guttus, similar to one found at Chichester, and figured in the Journal of the Association, vol. iv., p. 158.—Mr. Gibbs exhibited a half-shilling of the second coinage of Elizabeth, discovered in his garden near Windmill Hill, Gravesend. It is in fine preservation, and bears the date of 1571, on either side the mint mark of a castle.—Mr. Gunston exhibited rubbings of various brasses: a priest (circa 1420) from the nave of Haddenham Church, Bucks; a child, swathed like a mummy, from Stoke d'Aubernore; a knight and lady from Dinton, etc.-Mr. G. N. Wright read a short paper on the various Portraits assigned to Shakspeare, and exhibited the original painting formerly in the collection of John Lord Lumley, now in course of publication by Vincent Brooks, and to be seen at Hogarth's, in the Haymarket. -Mr. Pettigrew read a paper on, and exhibited a large collection of specimens illustrative of, Egyptian Glass.—Dr. Lee exhibited five curious specimens of ancient Egyptian glass, belonging, according to Mr. Pettigrew, to a late period. They consisted of representations of a double asp, with a lion's head entirely in blue glass; a jackal (the guardian of the tombs) in blue, green, and white; a cow reposing, with the solar disc and feathers between the horns, assigned by Mr. Pettigrew to the Egyptian goddess Athor, (Venus;) a hawk-headed scarabæus, with extended wings, of blue glass, streaked with white; and a bull bound for sacrifice, of blue glass.—Mr. John Brent read a paper, "On Canterbury in the Olden Times," containing many entries from the Canterbury records.—London Athenaum.

EDWARD OLIVER.—Of the present prospect in the affairs of Mr. Edward Oliver, who failed last year at Liverpool, the Times says:

<sup>&</sup>quot;According to the latest reports current at Liverpool, not a single penny has yet been paid in the shape of dividend on the estate of Edward Oliver, and those who were sanguine enough, in accordance with an arrangement concected at an early stage of the business, to take ships at a valuation of 50 per cent in full discharge of their claims, and who have since had the benefit of their earnings, will perhaps be called upon to refund heavily, and the prospect of the whole amount ultimately to be realized for the creditors has dwindled to something between 2s. 6d. and 4s. in the pound.

### THE ENGLISH MONEY MARKET FOR AUGUST.

From the London Bankers' Magazine.

THE financial events of the month of August have not proved to be of an important character. The successful completion of two loans, one on behalf of France and the other of Turkey, has constituted the principal feature of business, although at the same time the vote by which the Chancellor of the Exchequer is empowered to raise an additional £7,000,000 has also excited attention. In the midst of these operations an increased demand for money has necessarily arisen, and the result has been that the temporary pressure has caused higher rates to be paid for all descriptions of accommodation. The abstraction of capital, if it had been permanent, would have produced a very serious influence; but since it was well known that a large surplus would be returned immediately the lists were definitively closed, the apprehensions entertained were not of the usual depressing nature. Both the French Minister and the contractors for the Turkish loan deserve the thanks of the mercantile community for the prompt manner in which they arranged for the release of the deposits, so soon as it was ascertained what were the respective proportions due to subscribers, and consequently the dreaded inconvenience was much diminished, and ultimately altogether surmounted. These subscriptions occurring at a period when the requirements of the harvest increase the demand for capital, the influence of extraneous causes has been more keenly felt, but it is expected that the prospects of the crops at home, with the reported abundance in America, will prevent any great drain for wheat purchases, and thus leave the money market free from those fluctuating phases which would otherwise ensue, had the appearances of the harvest been less favorable. Trade has slightly improved, although it does not exhibit that encouraging activity which leads to extended enterprise. The caution, however apparent, may be of service in repressing an unhealthy action, especially in a period such as we are now passing through. The rate for money, which in the middle of the month had reached 31 to 4 per cent, nothing being done under the minimum terms of the Bank, has latterly become much easier, and the quotation is now about 3½ to ½, with an increasing supply of available capital. The bill-brokers allow 24 per cent for deposits, and they are not inclined to augment their balances. With regard to the position of the foreign exchanges, the tendency is more favorable, and remittances from Australia and America continue to arrive.

The variation in the price of English securities has not been extensive. Taking the extreme range, it represents about 1 per cent. There has been very little speculation, and the events of the war had scarcely any influence on prices. The current demand for money has, on one or two occasions, tended to depress the prices of consols; but there has subsequently been a recovery, immediately the pressure has shown

symptoms of subsidence. The quotation of omnium has been well supported, at from 4½ to 5 premium, but it is now barely so good.

The great attraction in the foreign market has been the scrip of the Turkish Four per Cent Loan. Two or three days prior to its actual negotiation, operations took place at from  $2\frac{1}{2}$  to  $3\frac{1}{2}$  premium, purchasers anticipating that there would be a rapid rise in its value immediately the contract was concluded. The terms, however, paid by Messrs. Rothschild had a speedy effect upon this fictitious value, and from 31 the quotation receded to 4 premium. At this lower rate, purchases were made by the insurance companies, and the result was a rally to  $2\frac{\pi}{8}$  to  $\frac{\pi}{8}$ ; but the nearest present value is  $2\frac{\pi}{4}$  to  $\frac{\pi}{2}$  premium. In Old Turkish Six per Cents there has also been some activity; but the changes have not been of a remarkable character. At one period, it was considered a favorable operation to sell the 6 per cents and purchase the 4 per cents, which exercised a slight influence; but now a different proceeding is adopted, and there are those who follow the opposite course. Peruvian stock maintains the late advance. Russian is also steady, and purchasers of Dutch have given increased strength both to the 21 and the 4 per cents. Spanish and Mexican continue quiet, the transactions having been of a very limited character.

As we anticipated, the announcement of reduced dividends has created a very prejudicial effect upon the securities of the leading railway companies. In all cases there has been a rapid decline, averaging from £4 to £6 per share. Great Western shows a fall of  $11\frac{1}{4}$  per cent, although there has since been a slight recovery from the extreme point of depression; the highest quotation of the month has been 66, and the lowest 54\frac{3}{4}. The whole of the balance-sheets exhibit in a most unmistakable manner a pernicious system of management, and until this shall have been thoroughly modified, it can hardly be expected that there will be any alteration for the better. Expenditure far outstrips any proportional increase of revenue, and the fallacy of the amalgamation principle, with the unproductive returns from branches, testify to the absence of administrative capacity among those who have attempted to develop the resources of these undertakings. Although the market may now be considered rather firmer than it was some week or ten days since, the decrease in rates of distribution has discouraged the public from making important reinvestments.

The demand for the shares of the joint-stock banks which existed in the early part of the month has sensibly diminished. Extensive purchases of city bank shares carried their premium up as high as 10 to 12, on £50 paid, but there have since been sales, and the quotation has now relapsed to 7 to 9 premium. Bank of London shares, in a similar manner, reached 6 to 7 premium, and being affected by a like course of operations, have declined to  $3\frac{1}{2}$  to  $4\frac{1}{2}$  premium. Union Bank of London supports the advanced quotations of  $28\frac{1}{2}$  to 29. Bank of Australasia shares and Union of Australia have been in request at improved prices. Other descriptions may be considered generally steady.

22

The following are the fluctuations in the English and foreign stocks during the month of August:

On the 6th September, the Bank of England raised the rate of interest to 4 per cent. Of this change the Times says: "In April last, when the rate stood at 41 per cent, the amount held was about £15,500,000. In May, when a reduction took place to 4 per cent, it was about £16,000,000; and in June, when there was a further drop to  $3^1_2$  per cent, it was over £18,000,000. Now it is again only £15,500,000, and, instead of any signs of steadiness at that point, there is every reason to anticipate a further considerable although perhaps temporary diminution. No arrivals are reported from Australia, although £600,000 is known to be on its way, and the West-India and Mexican steamer, which is now due, and might have brought a large sum, is understood to have had her departure delayed for a week. Meanwhile preparations require to be made for an installment of 5 per cent on the French loan on Friday next, the 7th instant; for one of 20 per cent on the Turkish loan, on the Wednesday following, which will absorb £1,000,000; and for one of 10 per cent on the English loan six days afterward. At the same time there is ground to suppose that although the American exchange is maintained at a point that promises continued remittances to this country, the high price to which wheat has recovered is likely to act as a check and induce large shipments of their heavy surplus of grain in place of gold. It is to be admitted that all these influences will probably prove of short duration, and that with the heavy production still reported from the mines of California and Australia, and the generally satisfactory character of the harvest in the principal countries of the world, there is nothing to warrant the idea of a serious or permanent pressure; but it is not the business of the Bank to rely upon contingencies, and in time of war the necessity is increased for attending promptly to every measure of security."

VIRGINIA.—We learn from the Richmond papers that the funds of the branch Bank of Virginia, at Portsmouth, have been withdrawn and deposited with the parent bank at that place. This has also been done by the Farmers' Bank with their branch at Norfolk. The officers of the banks in Portsmouth and Norfolk have nearly all either died or been so disabled as to be unable to attend to business. Notes are not paid, and business is completely at a stand.

### FOREIGN ITEMS.

RAILWAYS IN THE UNITED KINGDOM .- The report of Captain Galton, R.E., to the Board of Trade on railways in the United Kingdom for the year 1854 has just been issued. It is of considerable length, and contains some matter which has already appeared in The Times. The report also contains some very interesting and useful statistics on railways generally. It states that the length of new lines of railway sanctioned by Parliament during the year 1854 was 482 miles, being little more than half the length sanctioned in the previous year. Of the total length authorized in 1854, 358 miles were for England and Wales, 58 miles for Scotland, and 66 for Ireland. The length of new railways authorized in previous years reached its highest point in 1846, after which a rapid falling off took place, and continued till the years 1849 and 1850. But after the year 1850, the length of lines authorized by Parliament in each year steadily increased until 1853. In 1846, 270 railway acts authorized 4538 miles of new railway and £132,617,368 of capital; in 1847, 190 acts authorized 1354 miles of railway and £39,460,128 of capital; in 1848, 85 acts authorized 371 miles, and £15,274,237 of capital; in 1849, 34 acts authorized 16 miles, and £3,911,331 of capital; in 1850, 34 acts authorized 8 miles, and £4,115,632 of capital; in 1851, 61 acts authorized 135 miles, and £9,553,275 of capital; in 1852, 51 acts authorized 244 miles, and £4,333,834 of capital; in 1853, 106 acts authorized 940 miles, and £15,517,601 of capital; and in 1854, 71 acts authorized 482 miles of railway and £9,211,602 of capital. So that, in the course of nine sessions of Parliament, 902 railway acts were passed, authorizing the making of 8088 miles of railway, and the raising of £233,994,998 of capital.

The principal feature of railway legislation in the session of 1854 was the large number of bills passed which related to what may be termed arrangements between railway companies. The most important railway acts passed during the session of 1854, were the Great Western, Shrowsbury and Birmingham, and Shrewsbury and Chester Amalgamation Act; the York, Newcastle, and Berwick, the York and North-Midland, and the Leeds and Thirsk Amalgamation Act; the Eastern Counties, the East-Anglican, the Norfolk, the Eastern Union, and the Newmarket Working Arrangement Act; and the Railway and Canal Traffic Act, for facilitating the interchange of passenger and goods traffic from one system to another.

On the 30th of June, 1854, 889 miles were in course of construction, 45,401 persons were employed on them, being 51.07 persons per mile. The number of miles open for traffic was 7803, and the number of persons employed 90,409, or 11.59 per mile. The total number of passengers conveyed on railways in the year 1854 amounted to 111,206,707, against 102,286,660 conveyed in 1853, being at the rate of 14,160 per mile in 1854, and 13,659 per mile in 1853. The total receipts from all sources of traffic in 1854 amounted to £20,215,724, being £2576 per mile; the receipts for 1853 having been £18,035,879, or at the rate of £2408 per mile. The receipts for passengers amounted to £9,174,945, and for goods to £11,040,779, being an increase of £1,565,979, or 16.5 per cent over the amount received in 1853.

Bank Failure in England.—According to information lately obtained regarding the Isle of Man Bank, (Messrs. Holmes & Co.,) which failed for £190,000 in November, 1853, the prospects of the creditors are very poor. The bank had an establishment at Liverpool, and, like that of Mr. Oliver, it was reported at the time to be in possession of a large surplus. Much suffering has since been caused, and the complications connected with the estate are such that, although its affairs are said to have been several times before the Privy Council, nothing is known as to the probable date of a final arrangement. In the Isle of Man, the local regulations are understood to provide that no notes can be issued without security being given in real property, for the protection of the public; but the authorities, most of whom in the present instance are among the creditors, were lax in their duties and the bank at the time of its stoppage had £25,000 in circulation, or about three

times the amount to which it was entitled. The question as to the relative claims of the holders of this circulation is the one that has interposed the chief difficulties in the progress towards a settlement.—London Times.

THE TURKISH LOAN.—That capital is still abundant in Western Europe may be seen in the fact that the new Turkish four per cent loan of five millions sterling was taken at a premium of 2½ per cent. Only two bids were made for this loan, which is guaranteed by both Great Britain and France, namely:

"SIR: We hereby offer for the loan of £5,000,000 sterling, to be issued in 4 per cent bonds by the Imperial Ottoman Government, in conformity with the terms in the notice published by your Excellency on the 15th instant, at the rate of 102\xi\$ per cent—say, £102 12s. 6d. for every £100 stock.

"We have the honor to be, sir, your Excellency's very obedient servants,
"N. M. ROTHSCHILD & SONS.

"His Excellency M. de Musurus, Ambassador from the Ottoman Porte."

The next was from Messrs. Palmer, Mackillop & Co.:

"SIR: We beg to tender for the £5,000,000 of 4 per cent sterling bonds £100 11s. for every £100 bond, and agree to the conditions stated in your Excellency's notice of the 15th inst.

"And we have the honor to be, sir, your very obedient servants,

"PALMER, MACKILLOP, DENT & CO."

M. Musurus then declared that the tender of Messrs. Rothschild, being the mest favorable, was accepted.

A short conversation subsequently took place in relation to the payment of the premium, the loan for £5,000,000 actually representing, according to the terms offered, £5,131,250. After conference between the Governor of the Bank, M. Musurus, and Baron L. Rothschild, it was agreed that the first installment of £500,000 shall be paid as already arranged, and that the premium shall be left till the last installment.

WAR EXPENSES.—England begins to feel seriously the burden of the expensive war with Russia. Ordinarily the annual expenditure of the British government has been fifty to fifty-three millions of late years. Now, the official budget indicates a gross outlay of ninety-four millions sterling for the current fiscal year, namely:

| Interest and manageme | ent | of | Pı | ıbli | ic I | Deb | ot, |   |   |   |      |    |     | £ | 29,724,000 |
|-----------------------|-----|----|----|------|------|-----|-----|---|---|---|------|----|-----|---|------------|
| Army,                 |     |    |    |      |      |     |     |   |   |   |      |    |     |   |            |
| Navy,                 |     |    |    |      |      |     |     |   |   |   |      |    |     |   |            |
| Ordnance,             |     |    |    |      |      |     |     |   |   |   |      |    |     |   |            |
| Extraordinary, .      |     |    |    |      |      |     |     |   |   | 3 | ,000 | ,0 | 00- | _ | 49,812,600 |
| Civil Service,        |     |    |    |      |      |     |     |   |   |   |      |    |     |   |            |
| Loan to Sardinia,     |     |    |    |      |      |     |     |   |   |   |      |    |     |   | 1,000,000  |
| Collection of revenue | ٠,  |    |    |      |      |     |     |   |   |   |      |    |     |   | 4,386,000  |
| Miscellaneous, .      | •   | •  | •  | •    |      |     |     | • | • |   |      |    |     |   | 3,102,300  |
| Total                 | _   |    |    |      |      |     |     |   |   |   |      |    |     | £ | 04 524 900 |

Here is an extraordinary outlay, equivalent to nearly five hundred millions of dollars. France at the same moment is negotiating a new loan of thirty millions sterling, to cover current expenses. Another generation will be required to contribute towards the extinction of this accumulated debt; and two generations will be required to atone for the injury to the people at large of those two countries.

Austrian Finances.—Of the Austrian public finances a letter from Vienna, dated August 17, says:

"There has recently been a very great improvement in the Austrian paper currency, which is mainly attributable to the judicious reduction of bill portfolio of the Bank. The accommodation given by the institution in question was excessive, and a considerable part of the money obtained on bills was employed in speculating in the precious metals. In proportion as the currency improves the funds fall, but the phenomenon is easily explained. Many of those speculators who

were formerly accustomed to obtain credit at the Bank are daily obliged to sell stock in order to meet their obligations, and the natural consequence is, that the market is for the moment glutted. The city is full of rumors relative to new taxes, a new loan, a forced course for bank-notes in the Italian provinces, etc., but it is probable that the following financial measures are on the point of being introduced:

1. The Grund-Steuer (land-tax) to be raised to the amount of 20,000,000 florins.

2. The establishment of a 'Hypotheken' bank, or institution for granting loans on real property.

3. State domains of the value of 150,000,000 will be ceded to the Bank as payment of the debt of the State to that institution.

4. The bank will obtain a loan of 75,000,000 in silver on these State domains from the 'Hypotheken' bank. The above-mentioned State domains to be sold by degrees, and the mortgage on them to be paid off."

Bankruptcy of Messrs. Strahan & Co., London.—Mr. Alderman Farebrother offered to public auction Park Chapel and schools, belonging to Sir John D. Paul, by direction of the assignees. The property consists of a brick-built edifice, with bell-tower, known as Park-walk Episcopal Chapel, Chelsea, situated between King's road and Fulham-road, with ornamental grounds. The interior is fitted with galleries on three sides, and contains 180 pews and 343 free sittings, and is said to be capable of containing from 1500 to 1600 persons. The subscription or rent for pews is voluntary, and produces from 800l. to 900l. per annum. In the rear is a range of buildings for boys' and girls' schools in connection with the chapel. The chapel and a portion of the ground is held on lease for 69 years, and the remainder for 43 years, at ground-rents amounting to 49l. 10s. A number of questions were put to the auctioneer as to the right of the purchaser to nominate a minister to the chapel, consistently with any right on the part of the present minister, the auctioneer maintaining that the purchaser would have full possession of the chapel, and entitled, on completing the purchase, to nominate any elergyman who might be licensed by the Bishop. A gentleman (one of the congregation) stated that the chapel would only hold 1200 persons; that 500l a year were paid to the minister; and the expenses amounted to 400l. per annum. The property was put up at 2000l., and sold for 3750l.

MANUFACTURES IN GREAT BRITAIN.—We have London papers to the 28th, by steamer Arago. The *Times* speaks in flattering terms of the condition and prospects of business throughout Great Britain. From that paper we quote:

"The advices from the manufacturing towns regarding the trade of the past week are all satisfactory. Confidence in the prospect of the war, as well as in the results of the harvest, seems to have imparted steadiness to almost every department, and there can be no question that the commerce of the country and the general state of employment are such as would be deemed satisfactory even during a period of perfect peace. At Manchester, although buyers continue to act with great caution, the recent tendency to improvement has been sustained. From Birmingham the report shows an increasing activity in the iron-market, which leaves little doubt of an advance of 20s. per ton being decided upon at the next quarterly meetings, at the end of September. Tin and tin-wares are also in demand at an advance. At Nottingham the transactions at this season are usually limited, but orders have been received to a good extent, and the anticipations for the future are favorable. In the woollen districts there has been no material alteration, the operations being on a full average scale at firm prices. The Irish linenmarkets have been well attended, and show signs of returning animation. From almost all parts of the United Kingdom the statements respecting the harvest are encouraging, and the steady character of business has been owing to a fair home demand, no less than to purchase for shipment.

LONDON BANKS.—"On the 3d inst. the Southwark branch of the London and Westminster Bank was admitted into the Clearing-House on the same footing as a separate independent bank. Sir J. E. Paul having obtained the requisite sureties, the whole of the partners of Strahan's Bank are now at large upon bail."

### MISCELLANEOUS ITEMS.

THE NEW-YORK ASSAY OFFICE.—There is no establishment in New-York more worthy of a stranger's attention than the Assayer's office in Wall street. Let us direct a few lines to the subject, and show our readers how dust gets connected with half-engles.

The gold is taken into the weigh-room, where it is weighed and placed to the credit of the depositor; then to the melting and granulating room, where two parts of silver are mixed with one of gold-in order to purify the gold more perfectlymelted and dropped into cold water, forming drops similar in form and color to those produced by dropping melted lead in water. This composition is then taken to the separating-room, where it undergoes two operations—separating the gold from the silver, which is done by an acid, and the acid from the silver. By this time the individuality of the metals, as metals, becomes lost, being held in solution by muriatic acid, which solution, when caught in a glass, has the appearance of very clear water. This is put in large tubs and filtered into a solution of common salt and water, which causes the gold or silver to settle to the bottom. The gold is now as pure as pure can be, and it only remains to form it into bars. But one thing more is necessary; the metal, as it comes from the salt and water, when placed over the fire would fly and snap, thereby causing considerable loss. This is obviated by subjecting the gold to the pressure of a hydraulic press of 200 tons power, thus condensing it into a cheese or cake about fourteen inches in diameter and four or five inches thick. The rigid discipline of the press destroys its ambition, so that when broken by a coal-chisel it melts as quiet as could be wished. After melting, it is run into bars of different sizes; the largest, 5 or 6 inches long, about 3 inches wide, and 1 or 11 inches thick, is valued at \$5500; the others range from \$500 to \$3000. These bars are taken into the Assayer's office, weighed and scaled, when they are ready for the mint. These various processes are so perfectly arranged that not a particle of the metal is lost.—Albany Knicker-

RAILROAD BONDS.—The Western Railroad Company have made a favorable negotiation of \$500,000 of their bonds in Europe, which will provide in part the funds for building a second track from Springfield to Albany, besides meeting the payments for some purchases made by the Company some time since. The Boston & Lowell Railroad Company are offering their six per cent bonds in the market at par, which tends to keep down the price of the stock, now held at 70½ per share. The receipts of the Old Colony Railroad show a very handsome gain over the corresponding period of last year, and the stock has advanced to 86 in consequence, with still an upward tendency.

The Directors of the Chicago, Alton & St. Louis Railroad Company have leased their road to the late Vice-President, Hamilton Spencer, for a term of twenty years, and for an annual sum of \$600,000, including the interest on the Company's floating debts. Doubts are entertained of the validity of the deed.

THE FISCAL YEAR AT NEW-ORLEANS.—The commercial year which has just closed, (Sep. 1,) will not easily be obliterated from the memory of merchants. At its commencement, although it was evident that the difficulties between Russia and the Allies could not be settled by treaty, the prospects for the grain crops in Europe were good; and although it was well known that the grain in this country had suffered from drought, no one had any idea that the deficiency would be as large as it ultimately proved. Our cotton crop promised to be an average one, and although the storms in the first week of September had done damage, no one anticipated the wide-spread injury which had been done. Under these circumstances the season for cotton opened at moderate prices, which gradually improved in proportion as the damage done by the September gales became more apparent, and when in the month of April it became probable that the Red River, Arkansas, and the Alabama rivers were not likely to be navigable during the season, prices

advanced rapidly. The low stage of the rivers could not have been foreseen by any one, and those who happened to have shipped largely may bless their good fortune, and not lay claim to any superior judgment. The profits made by a few lucky speculators are more than counterbalanced by the losses and inconvenience experienced by factors, who were under advances to their country friends, and by the planters in the loss of their credit, and the enormous expenses incurred to bring a portion of their crop to market in order to procure the necessaries of life. It is to be hoped that this year's misfortunes will impress upon the mind of the Red River and Arkansas planters the necessity of building railroads, to put them in communication with the Mississippi. To accomplish this it is, however, not sufficient that the planters take stock and pay their installments regularly at maturity, but it is necessary that each parish shall appoint a committee to supervise the construction of the road; for no great enterprise can prosper unless the parties vitally interested in its success take an active part in its management.-New-Orleans Picayune.

New-Orleans Finances. "The Commissioners of the Consolidated Debt of New-Orleans" invite proposals until the second Monday of October next, (1855,) at 12 o'clock M., for the purchase of a series of four hundred and fifty bonds, of one thousand dollars each; said bonds to be dated the 1st of October, 1855, payable in thirty-seven years at the office of the Treasurer of the city, with interest coupons attached thereto, at the rate of 6 per cent per annum, payable semi-annually in the city of New-York, on the 1st of April and the first of October in each year. Proposals to be indorsed, "Bids for the Purchase of Bonds of the City of New-Orleans," and addressed to the "Commissioners of the Consolidated Debt of New-Orleans," the bonds to be adjudicated to the highest bidder, the Commissioners reserving the right to reject any or all bids.

RAILROADS.—The late accidents on the Camden & Amboy Railroad will, it is hoped, induce the Company to construct a second track, if only for their own protection.

The railroad companies have always been averse to any legislation that would

restrict them in the least degree. In 1854 Gov. Price said:

"The great frequency of railroad accidents in this and other States, so disastrous to property, and so destructive to human life, creates an urgent necessity for some law of a preventive character. A better system of management and discipline is needed in the running of trains, the attention to signals, switches, celerity of travel, etc., than has heretofore prevailed."

This year he again alluded to the subject as follows:

"The railroads of our State have been conducted without serious acident or loss of life, during the past year. This exhibits a commendable care on the part of those who have the direction of our public works. \* \* But double tracks and restricted speed should be provided for by law."

We quote these extracts to show that the Camden & Amboy Company, in common with others in the State, have not adhered to the single track without reiterated warnings of its danger. It has been so evident as not only to excite remonstrance among the people, but even two allusions by the State Executive.

USES OF TOBACCO.—The results of recent chemical researches made upon the tobacco-leaf are full of interest, instruction, and warning. They have shown that in the dry leaf there naturally resides from two to eight per cent of a narcotic, volatile, highly poisonous, alkaline liquid, to which the name of nicotine has been given, and along with it a three or four thousandth part of a volatile fatty oil, which also possesses narcotic properties. Upon the chewer the influence of tobacco depends chiefly upon the action of these two ingredients of the natural leaf. But the smoker produces during the burning of his tobacco a new oily "distilment," which come to him with the smoke, and materially exalts the action of the tobacco upon his system. This empyreumatic oil, as it is called, mingles in vapor with the natural volatile oil and nicotine of the tobacco, and aids in producing those varying and complicated effects upon the body and brain with which most of us are directly or indirectly familiar. That these effects are usually pleasing, the experience of millions daily testifies; that they are sometimes injurious is equally certain;

that they awaken thirst, and lead some to drink intoxicating liquors, cannot be denied; and yet, according to the highest authorities in this department of physiology, the use of tobacco in moderation has not been proved, in this country at least, to be injurious to the human health. That the practice of smoking and chewing, as practised sometimes in this country, and oftener in the United States, may lead to dirty and disgusting habits, those of our readers who do not share this amiable vice will readily admit, and also that tobacco may be used immoderately and to the manifest injury of health. But it may be permitted to scientific common-sense to doubt whether all this justifies the utter condemnation of the practice and the fierce denunciations against the use of tobacco in any form or degree, which have lately been put forth both in Great Britain and in America.

THE MAGNETIC TELEGRAPH.—The importance of telegraphic communication with our scaboard has been greatly enhanced since scientific men have revealed to the world the theory of storms. They prove to us that all great storms in this latitude travel in one direction; then measure their rate of progress with mathematical precision, and also their duration. The discovery of these facts almost simultaneously with the invention of the telegraph is a most fortunate occurrence, and may be made of the greatest importance to all who are interested in the shipping trade, since our whole coast can be supplied with signal stations at the headlands, which, connecting with the telegraph, can keep displayed a constant index of the weather east and west, for the benefit of passing vessels, and thus guard them perfectly against impending danger. A short time since a large fleet of vessels which had been detained in Holmes's Hole, sailed on their voyage round the Cape on one of those fine days which often precede a sudden and violent change; they knew nothing of the danger that awaited them; before they had doubled Cape Cod they were all overtaken by a dreadful storm, which destroyed a large portion of the fleet, many of which were never heard from, and many lives were lost. The steamer Ajax, on her way from New-York to take in tow the new ship E. Forrest, was lost with all on board. She was among the vessels that left Holmes's Hole the morning of the storm. Had there been a signal station on Nobsque Head connecting with the telegraph to New-York, a signal would have notified them all of their danger, and they could have remained in safety until the storm had passed over. We hope to see the laudable enterprise of a telegraph to the headlands of the Vineyard and Cape Cod taken in hand by our enlightened merchants and insurance companies, and built as soon as practicable.—Boston Courier.

### BANK ITEMS.

BANK PLATES.—Mr. Schoonmaker, Bank Superintendent, has appointed Mr. Geo. D. Lyman, [manager of the Clearing-House,] agent of the Department in this city, having charge of the bank-note plates and printing under the supervision of that Department. The appointment is a very good one, and is entirely satisfactory to the banks interested.

NEW-YORK.—Lucius Hopkins, Esq., of the firm of Hopkins, Allen & Co., has been selected as the President of the Importers & Traders' Bank, a new institution, to be located in Broadway, corner of Murray street. George R. Conover, Esq., at present Receiving Teller of the Mechanics' Bank, has been elected Cashier.

Counterfeit Bills. — There are spurious bills in circulation purporting to be issued by the Metropolitan Bank of this city, but altered from the genuine bills of a bogus concern of the same name at Washington City. The title of the Bank in both cases is engraved in the same style, but the vignettes and lettering of the fraudulent bills differ from those of the Metropolitan Bank of this city, and the sig-

natures of President and Cashier are of parties unknown here. The genuine bills of the New-York institution were engraved by Messrs. Danforth, Bald & Co., Wall street, while the others were executed by Messrs. Wellstood, Hanks, Hay, & Whiting. Bank-note engravers should, as an invariable rule, never copy the lettering and style of bank plates used for banking institutions with similar names. In the present case, the engraved title of the bogus bank is so close an imitation of the plate engraved by Danforth, Bald & Co., that several of the bills were taken recently by New-York country banks and sent to this city for redemption as bills issued here.

New-York City.—J. E. Southworth, Esq., was last week elected President of the Atlantic Bank, in place of John Rice, Esq., who declined a reëlection.

New-York City.—Parker Handy, Esq., for some years a banker at Cleveland, Ohio, has been elected Cashier of the Ocean Bank in this city, as successor to George S. Coe, Esq., now Vice-President of the American Exchange Bank.

New-York .- Of recent changes in the East River Bank, corner of Eighth street

and Third avenue, the Express gives the following statement:

"The Directors of the East River Bank resolved on Saturday, 25th of August, to pass \$111,000 of bad and doubtful debts to profit and loss. This will have the effect of reducing the average of loans and discounts in their next statement. The Bank has also charged \$11,000 more as a loss on stock in hand. The capital is now \$314,000 in good and available securities, which is large enough for the location of the Bank. The following statement, however, will show the exact amount of loss by the Bank:

| Loss on bills discounted, |          |    |
|---------------------------|----------|----|
| Total                     |          |    |
| Actual loss sustained,    | \$99,000 | 00 |

The losses referred to have been known among the bank officers for months past, and no concealment was attempted. In fact, the East River Bank, in consideration of those losses, obtained a remission of taxes from the tax commissioners.

North White Creek.—The Cambridge Valley Bank, at North White Creek, Washington county, commenced business in September. President, Orin Kellogg, Esq.; Cashier, James Thompson, Esq.; capital, \$115,000.

Oswego.—The capital of the City Bank, Oswego, was increased on the 1st August, from \$225,000 to \$300,000.

MASSACHUSETTS. — The banking institutions of Boston, after consultation and deliberation, have decided to settle their balances at a clearing-house similar in its organization to the one now so successfully in operation in New-York. It was decided that before the arrangement was carried in effect, it should receive the approval of those representing two thirds of the banking capital in the city. The plan has been agreed upon by institutions having three fourths of the bank capital, and it will doubtless be adopted by all the banks. The business of settling the daily balances will be greatly facilitated, and it is thought that the Clearing-House will have a beneficial effect in keeping the banks in a healthy condition. The plan meets with such favor that there can be no doubt of its complete success. Our banking friends in Philadelphia and New-Orleans would find the plan of a clearing-house a great saving in labor.

RHODE-ISLAND.—John R. Balch, Esq., has been elected President of the Grocers & Producers' Bank at Providence, in place of A. B. Dike, Esq., resigned.

Warren.—The Sewamset Bank, at Warren, commenced operations in September. Capital, \$100,000.; President, George Lewis Cooke, Esq.; Cashier, Theodore Andrews, Esq.

CONNECTICUT.—S. F. Hurd, Esq., has been appointed President of the Bridgeport Bank, in place of A. P. Houston, Esq., who declined a reappointment.

PENNSYLVANIA.—The Bank of Newcastle commenced business at Newcastle, Lawrence county, in September, with a capital of \$60,000 paid in. President, Charles T. Whippe, Esq.; Cashier, S. E. Neiler, Esq., of the late banking firm of Neiler & Warren, Erie, Pa.

NORTH-CAROLINA.—The Bank of Wilmington, at Wilmington, commenced operations on the 14th September. John McRae, Esq., President; Stephen Jewett, Esq., Cashier.

WISCONSIN.—Ex-Governor Leonard J. Farwell has been elected Vice-President of the State Bank at Madison.

ILLINOIS.—The Belleville (III.) Tribune says that Messrs. Bogy, Mittenberger & Co., of St. Louis, propose to establish a branch of their house at Belleville, and commence a regular banking business under the laws of Illinois. The new institution will be called the Bank of Belleville, and will be ready to go into operation by the first of October next.

Burning of Notes.—Yesterday, in the United States District Court, about ten thousand dollars of the bills of the old Bank of Illinois, at Shawneetown, were brought before Judge Drummond, and burned by order of the court, in the presence of the clerk and trustee of the Bank. These bills were a portion of those issued by the institution, and since its failure they have been collected from time to time by the assignees, and, since their decease, by the trustee of the Bank, William Thomas, of Jacksonville. As a suit has been standing in the United States District Court for a long period against the assignees, and as the affairs of the concern have been settled under order of the Court, its bills and certificates have already been returned to the amount of from one to two hundred thousand dollars, and destroyed. There cannot be many more of them in the State.

This suit was commenced by the Bank of the State of Missouri against the assignees of the Bank of Illinois. The plaintiff recovered, but the suit was continued in court for the purpose of closing the affairs of the defunct institution. This Bank was one of the Illinois wild-eat breed, which went under in the financial crash of 1837.—Chicago Tribune, July 18.

Canada.—It is stated that Messrs. Masterman of London, bankers, are about to establish a bank at Montreal, in connection with other capitalists, of which rumor says the late Inspector-General is to be President.

#### SALES OF BANK-STOCKS IN NEW-YORK—(Continued from p. 240, September No.)

The sales of bank shares during the month show no reduction in market values. They nearly all bear a premium, where transactions are noted, except Ocean Bank stock, which is advancing towards par. The limited operations in this species of security we consider a favorable symptom. Bank stocks are generally held for long investment, and any active movement in any one stock is an unfavorable feature. The sales of the month were as follows:

### For the week ending September 3.

### Notes on the Money Market.

NEW-YORK, SEPTEMBER 26, 1855.

Exchange on London, at Sixty Days' Sight, 91 a 92 Premium.

The money market continues to present favorable features; although the events of the month have a tendency to increase the rates on loans. In Wall street, loans on call are now quoted at 7 per cent as the minimum, with an occasional transaction on a large scale, and on favorite securities at a shade lower—say 6 a 6% per cent. For business paper of the best stamp, the rates in the street vary from 7 to 8 per cent; but the banks being able to maintain a liberal line of discounts for their customers, very little paper of a prime order finds its way to the brokers. Since the publication of our last No. the Bank of England has advanced its minimum rate of interest from 3½ to 4 per cent. This measure was called for by the steady and heavy demand for gold for the continent of Europe; thus lessening the aggregate in the Bank's vaults from £18,060,000 on the 14th June, to £14,939,000 on the 1st September. This step was further urged by the unfavorable indications of the harvest both in England and on the Continent, leading to expectations of a short crop of wheat and other cereals. This intelligence, while it depresses the foreign market, has given an impetus to our own; and we have already to record a material advance in the market values of breadstuffs, although we show, (as in our September No.,) that the crop of wheat in the United States will be equivalent to a surplus of seventy-five millions of bushels.

Of the movements of our city banks since the middle of August, the following is an official summary:

| 1855.     | Loans.         | Coin.                | Circula <b>in.</b> | Deposits.             | Coin in<br>Sub-Treasury | Total<br>. Coin. |

The movements by the city and country banks of Massachusetts show an expansion quite as great as by our own. Since June, 1854, the loans of the banks in Boston have increased from \$48,556,000 to \$54,209,000, and the specie from \$2,560,000 to \$3,442,000. The country banks maintain a stronger position, as shown by their monthly statements, than in 1858-4. In order to show the changes of the past year, we continue our summary from our August No., namely:

## Condition of the Country Banks of Massachusetts. (Continued from page 148, August No.)

The movement in Eric Railroad shares was a speculative one, with very large sales and showing an advance from 52 to 56 a 57. In Reading Railroad shares, the sales have also been heavy. The official reports of the Company indicate largely increased receipts for the year 1855 beyond those of 1854, and with the aid of these returns, the stock has advanced from 75 in June to 98 a 100. A dividend of four per cent has been recently declared, and the shares have now receded to 95 a 96.

The supply of State bonds is quite equal to the demand, and the market is firm. For city loans there is an increasing inquiry. We furnish in another portion of this No. a careful summary of the market values of government, State, city, county, and railroad bonds. The following tabular view of the indebtedness of leading cities may be relied upon as from correct sources:

DEBTS AND RESOURCES OF THE PRINCIPAL CITIES OF THE UNION, FROM THE LATEST OFFICIAL REPORTS.

| Cities.        | Debt.      | Populat n    | Tax'ble prop'ty  | . Remarks.   |
|----------------|------------|--------------|------------------|--|
| New-York,      | 15,114,856 | 750,000      | \$462,000,000    | The accumulated sinking fund amounts to \$5,170,808.   |
| Albany,        | 2,628,016  | 60,000       | about 23,000,000 | Sinking fund annually, \$20,000.  About \$1,500,000 bonds issued in favor of railroads who provide for interest and ultimate payment of the bonds. |
| Baltimore,     | 11,672,889 | 20,000       | about 90,000,000 | The interest for about \$5,000,000 to be provided by R.R. Co.  |
| Boston,        | 7,779,955  | 160,000      | 242,000,000      | The total debt includes \$5,432,000 issued for the aqueduct.   |
| Brooklyn,      | 1,084,540  | 200,000      | 90,000,000       | The sinking fund amounts to \$300,000.   |
| Chicago,       | 1,828,000  | \$5,000      | 80,000,000       | The total debt includes \$500,000 bonds for building sewers, part issued.  |
| Cincinnati,    | 8,181,000  | 190,000      | 45,000,000       | \$1,180,000 issued in favor of   |

### According to the Times :

The Bank of England has changed its rate of interest this year four times. The reduction or the advance of their rate is always looked upon in Lombard street as an index of the condition or prospects of the money market. Since the year 1849, these changes have been as follows:

<sup>&</sup>quot;The money market has resumed its easy position; the recent pressure has been succeeded by an abundant supply of money both in the Stock Exchange and 'out of doors,' and loans have again been obtainable at low rates. The minimum rate at the Bank of England is advanced to four per cent, but in the discount-market there has been a great increase of ease, mainly caused by the reaction consequent upon the return of the surplus deposits on the French and Turkish loans. The arrivals this week have been moderate; but, notwithstanding that, the demand for gold for export to the Continent has not entirely ceased. Many parcels of the precious metals have been presented for purchase at the Bank of England."

The war has not yet produced any very serious effects upon the funded securities of either England or France; but it can not be doubted that one or two more years of the war would depress every description of property in value. Up to this period, the war has been a popular one with the masses of both countries; and every proposition for a new loan has been readily responded to by small and large capitalists.

As to Russia, it may be said that the results of the war will be more disastrous. That government has not active or perminent resources equal to either Great Britain or France. At the commencement of the present year, there were in circulation in Russia, credit-notes to the amount of 556,337,021 silver roubles, (about £07.359,000 sterling) being £44,961,449 roubles more than at the beginning of the year. The cash in hand to guarantee this paper-money has increased only 156,787,032, being 400,000,000 of roubles, or £70,000,000 below what it guarantees. The debt of Russia at the beginning of 1853 was as follows:

| Due abroad at | fixed perio | ds,                                     | • | £5,714,900  |

### DEATH.

AT CHARLESTOWN, MASSACHUSETTS, Thursday, August 30th, DAVID DEVENS, Esq., aged seventy-nine years, President of the Bunker Hill Bank. He was a native of Charlestown, and for a quarter of a century, Treasurer of the town, and a Director in the Bunker Hill Bank from its institution, and for the past twenty years its President. He was of strict integrity, a gentleman of the old school, and accumulated a handsome property, the fruits of industry and frugality.

# BANKERS' MAGAZINE,

AND

### Statistical Register.

Vol. V. New Series. NOVEMBER, 1855. No. V

### BANK ARCHITECTURE.

ARCHITECTS and others are referred to the annexed advertisement of the Publisher of the Bankers' Magazine, in which a premium of one hundred and fifty dollars is offered for acceptable plans for banking-houses. It is well known that in many towns and villages in the interior, there are no competent architects for the construction of public buildings. Hence the necessity of relying upon the taste or fitness of mere house-carpenters, or of sending to large cities for appropriate plans and specifications. It is known that at this time one of our New-York city architects is engaged in the construction of three banking-houses in the western part of this State, and no doubt other architects of this city are equally well employed at various places.

There are obvious defects, even in this city, in the construction of banking-houses and other public buildings. Hence the advantage of placing before the people the most desirable plans for such edifices, accompanied with such suggestions and remarks as will lead to the construction of durable and FIRE-PROOF buildings. One of the banking-houses constructed in this city within the past three years is provided with a wooden cornice. This, too, when the recollection of disastrous fires is fresh in our memory, and when it is well known that in such edifices no wooden work should in the exterior be allowed. Should not such incomplete and dangerous buildings be prohibited by the Fire Wardens?

...

Mr. Gilbart of London some years since offered and paid a premium of one hundred pounds sterling for the best Essay on Banking, (including architectural models that may suggest improvements in the bank-house or office.) In the essay prepared and accepted, it is very properly said: "The architecture of a banking-house, more especially if it be of a national character, or expected to assume an important position from the magnitude of its operations, should be marked externally, internally, and throughout, by stability, as its leading feature; which a builder of intelligence will not fail to combine with taste. It is to be regretted that frequently so little care is taken to effect this most desirable combination, or that the pains bestowed should often be so singularly unsuccessful. In many buildings it is manifest that materials have been provided on a most liberal and even lavish scale; whilst, at the same time, to save perhaps five per cent upon the outlay, an architect of inferior ability has been employed, and the whole building wants that grace and character which every structure should possess."

#### TO ARCHITECTS.

THE publisher of the Bankers' Magazine offers a premium of One Hundred and Fifty Dollars for the three best Plans for Country Banking-Houses, namely:

\$50 for a Plan of a Banking-House to cost about \$8,000 to \$10,000.

\$50 for a Plan of a Banking-House to cost about \$15,000 to \$20,000.

\$50 for a Plan of a Banking-House to cost about \$25,000 to \$30,000.

The first to have a front of 25 feet; the second to have a front of 30 feet; the third to have a front of 40 feet, or more.

The estimate in each case to be independent of the price or cost of the lot. Each Plan to include a Banking-Room and Directors' Room on the main floor; and a dwelling-house (or offices) under the same roof. Each Plan for the Banking-Rooms to have in view special reference to—

Economy of Cost and Space. II. Light, Ventilation, and Heating. III. Arrangement and Convenience of Vault, Desks, Counters, and other furniture. IV. Safety against Fire and Burglars. V. Durability, Strength of Materials, and, finally, Architectural effect.

The plans that may be submitted, will be referred to a Committee of Bankers or Bank Officers to decide upon; and the accepted plans will be published in the Bankers' Magazine for January next, or soon after, with engraved views of the fronts, and specifications for building.

The publisher reserves to himself the right to retain for publication, any one or more of the plans that shall not be accepted.

Specifications and details, with estimates of the cost of materials, will be required for the plans that shall be accepted; and the names of the architects will be published with their plans, accompanied with such remarks as they may deem proper for the work. Plans proposed for the premium, will be received until the 15th of December next, by J. SMITH HOMANS, Publisher of the Bankers' Magazine, 162 Pearl street, New-York.

### BANK ARCHITECTURE-PHOTOGRAPHS.

Correspondence of the Bankers' Magazine.

### To J. SMITH HOMANS, Esq., Publisher, Etc.:

Sir: Your circular to architects has been received by me this afternoon, in which I find three several premiums offered for designs for banking-houses, to cost various sums from 8 to 30,000 dollars.

I presume that what I have to say on the subject will not alter the determination already expressed in the circular, but it may, nevertheless, be deemed not irrelevant to the subject of banking-houses. As I have no intention of competing for either of the premiums, what I say will not be set down as unfair to those who may see proper to employ their leisure in designing a pretty structure for some fancy situation, which may serve for a church or a theatre, a bank or a poor-

house, as a school or a tavern, as may be called for.

It seems to me that, as the publisher of the Bankers' Magazine, you have begun at the wrong end in requiring finished plans and estimates of cost, which can only, under the most favorable circumstances, be utterly useless. I say, under the most favorable circumstances, because when not useless, they will be in the next best condition, unsatisfactory and impracticable; and in another case, an expensive failure if attempted to be carried into effect in real stones and mortar. The elevation will suit no particular spot in which the BANK must be located; the particular grade or other circumstance of the lot will cause an alteration to be made to accommodate it; the vicinity of some other building or object has also its effect on the arrangement of the plan; while a peculiar formation or defect in the ground will cause an immense difference in the estimate of the expense. Whims of some of the committee for the building will cause further alterations; and the accommodation of the president, or cashier, who may reside in the building, will cause still further alterations to allow his family the required room and conveniences. Some one or more circumstances will require these alterations, which will extend over the several items of the front, the extent of the plan, or increase of the cost. In fact no estimate of cost, if given in dollars, can be trustworthy for any two districts of country, or for any two periods of time. The only way in which a comparative estimate, worth the paper it may be written upon can be made, is to give the quantities of materials in each branch, and the number of days' labor which, in that branch, will complete the building, according to the plans, from the level of the street upwards; thereby leaving out all foundations or grading, which often amounts to a considerable sum, but never the same in any two places. All the work above this level can, or ought to be, executed in equal times and with equal quantities of materials in all places; as good workmen will do the same amount of work in the same time, and with the same effect, whatever the rate of wages per day may be at any given time or place.

Banks in this country are very differently arranged, both as to their

banking operations and to the arrangement of the building in which these operations are conducted, and but little aid can be obtained by the architect who studies the European edifices, in order to design an edifice for banking purposes in the United States, as far as the more public portions of it may be affected thereby; while in the details required for security, the European banks are almost complete, both as regards fire and burglars.

Banking-houses are in fact, built like every other commercial edifice; that is, to earn and not to spend an income. In banks, fine feathers do not always make fine birds. Banks should not show a niggard parsimony in the buildings, but at the same time it ought not to be expected nor exacted from them that their business edifice should so far exceed, in splendid external or internal decoration, that of the town house or the village church. An essay on the wants and necessities of banking, as well as other public buildings of a similar grade, adapted to small or even large cities in the United States, is still a desideratum, and a premium for such might not be without its value, not only to banks, etc., but to all who may have to occasionally transact business with them.

There is another subject connected with banks, and I presume the Bankers' Magazine may be the place to notice it. I refer to copying bank-notes actinically. That it is a subject in which banks have some interest I believe you will admit; for although banks may not be bound to receive or pay such when presented at their counter, yet the public will soon refrain from taking the bills of such banks as are liable to be so copied. That they can be so copied is undeniable, and I have some such in my possession, both as transfers, (negative so called,) and the prints transferred from them equal in every way to the originals; so much so, indeed, as to render it impossible for either the registrar, or the president, or cashier to say, from an inspection of the bill itself, whether they did not actually sign it, although I could show them the operation of engraving and signing one by sunlight, while they stood a few minutes looking on.

I inclose an actinic transfer taken from a half-worn bill, and from it any number of impressions may be taken, equal to the original; not so quickly, it is true, as from an engraved plate, but I could take the transfer and print thousands from it before one plate could be engraved. I consider it is high time the banks should pay some attention to the matter, or else the public may soon find it difficult to

determine the genuine from the false bill.

With two actinic or photographic transfers of bank-bills, one of the Bank of Milford, \$1, and the other on the Atlantic Bank, of the city of New-York, \$2, I have made several experiments with photographic plates. I prepared the paper last night that it might be dry in the morning, and, on placing it under the bill, the impression was made by twelve minutes' exposure to the light; the subsequent processes took about ten minutes more, including drying by the fire, and it is now in a condition to give between forty and fifty impressions in a day, besides the additional number of transfers and their produce from the original, without deteriorating it in the slightest degree.

Of course all the copies from such transfers would have the same number as the original bill, but this would be no protection to the public, as they never examine the number or letter of a bill, nor, unless several copies were in possession of the same person at once, could the examination be of any use to them; and even then they would have to reject all, even though the genuine original was among them. No private mark can be put on a genuine bill, for every thing is copied, even to the very marks made by folding the bill, and the pin-marks or holes made by the pin used by brokers and others in attaching several in a parcel or package.

W. R.

New-York, 9th Oct., 1855.

### REMARKS.

Our correspondent will observe, by further examination of our advertisement or prospectus, that we shall require "specifications and working details" only for such plans as shall be accepted; and we conceive that the plans of the architect can be, at a distance and remote from his own observation, carried into effect only with the aid of such specifications.

Our main object is to furnish for the use of institutions and individuals at a distance, and at points where the aid of competent architects cannot be secured, such plans as shall be deemed desirable in the construction of banking-houses. Before such plans can be available to our subscribers, it will be obviously necessary that the plans should be accompanied by estimates of cost of materials and labor, together with such working details and information, as will enable persons at a distance to carry the plan or plans into effect.

No such details or estimates will be required in the outset. All that we require at present are front views of the exterior, and a plan or plans of the first floor or banking-rooms; so that the committee may decide not only as to the general effect of the building, in its exterior, but as to the general convenience and adaptation of the inside plan for a banking-house.

Our architectural friends will therefore observe that in any plan or plans that they may furnish, the points alluded to in our prospectus should be strictly borne in mind, namely: Economy of cost and of space. II. Light, ventilation, and heating. III. Arrangement of counters, desks, vaults, closets, etc., so as to secure economy of space and a proper distribution of light, for the benefit of the clerks. IV. Security against fire and burglars. V. Durability, strength of materials, etc.

Under the first head it is essential that such materials shall be used, externally and internally, as will secure the largest benefits from the least space. In the construction of a banking-house, no space should be lost; and while economy should be carefully consulted, SAFETY AND PERMANENCY are far more important.

II. As to light and ventilation, we consider that these things are generally lost sight of by builders. It is important that the light should be largely admitted. It is far easier to exclude surplus light than to admit additional. We think, too, that the desks should be so arranged as to appropriate the light to the benefit of the officers, not

to that of the customers of the bank. In our own city (New-York) it will be found in numerous banking-houses that the desks are arranged in the centre of the floor, instead of being placed between the windows. The customers therefore enjoy the light without wanting it; while the book-keepers are compelled to sacrifice their eye-sight by the too common use of gas-light.

III. Another point, and of greater importance, is to secure a uniform temperature of the atmosphere in a working room; also, thorough ventilation. This can be done effectually by the introduction of hot-air or hot-water pipes, high ceilings, and proper ventilating processes. In a room or rooms, where ten or twenty persons are at work six or eight hours, there should be openings, upon scientific principles, for the escape of noxious air. Сомборт and неаlth both demand this.

IV. In all these arrangements, the interests of the stockholders should not be forgotten; and here we must urge the prime necessity of durable and secure buildings. Structures that the hand of TIME will deal gently with; that the hand of the BURGLAR need not approach; and in which no fears of FIRE need prevail.

With these objects constantly in view, the architect can well plan and construct an elegant, convenient, and safe building at about the same cost as a homely, uncomfortable, and uninsurable building can be.

### Banking-Houses.

A Bank officer in Massachusetts, in acknowledging the receipt of our prospectus, or offer of a premium for acceptable plans of bankinghouses, says:

"I have put your circular, offering a premium for plans of bankinghouses, into the hands of an accomplished architect, who, if he will but set himself at work, will, I am sure, be successful. At present he objects to your proposition to publish any plan you may see fit, etc."

Our correspondent will no doubt see, on further reflection, that the architect he has in view, is blind to his own interests. If we do not publish his plan or plans, his labor will not be lost; they will be returned carefully and will be available for other purposes.

But if we do publish them, it will, of course, be with the name of the designer, and he will thus secure a notoriety which could not be gained by any other means. His name and his professional capacity would, in this case, be known immediately throughout the whole country—or more especially to hundreds of bank officers and bankers, many of whom at this time, are in want of good plans for banking-houses and competent architects for their construction.

The labor, therefore, of preparing plans for our work, will by no means be labor lost. The premium offered may be considered small; in fact, it is so, when we consider merely the labor and time required for their preparation; but the professional reputation that will certainly be acquired by the successful competitors, (as well as by all whose plans we may see fit to publish,) will be equivalent to ten or twenty times the premium suggested.

### CURRENCY OR MONEY.

Remarks on Currency or Money: Its Nature and Uses, and the Effects of the Circulation of Bank-Notes for Currency. By a Merchant of Boston. 8vo. pp. 112. Boston: Little, Brown & Co.

### CHAPTER FIFTH.

FACILITY OF ESTABLISHING NEW BANES IN MASSACHUSETTS, AND THE EVIL EFFECTS PRODUCED BY THE LARGE ISSUES OF THEIR NOTES.

I. Why are new Bank Charters applied for? II. Mode of paying Subscriptions. III. Artificial Wealth and fictitious Values. IV. The uses of Capital. V. Wages and Prices of Property. VI. Monopoly of the Currency. VII. Changes in Laws respecting the Currency. VIII. The United States as the Commercial Centre of the World. IX. Notes under Ten Dollars. X. Capital wasted in foreign luxuries. XI. Evils of the present Banking System.

When an application is made to the Legislature for a new bank charter, it can not be for the purpose of investing money that is lying idle, for such a state of things can hardly exist under the present system of currency and banking in the United States. There is always most demand for the creation of new banks when money is most plenty, because then prices are rising, and many are therefore disposed to increase their business, and for that purpose to increase their facilities for borrowing money. The premium at which bank-stock sells at such a time is another inducement to subscribe for the stock of new banks.

In Massachusetts, it is usual for the legislative committee to whom an application for a new bank is referred, to ask for the subscription-list for the capital stock. The chairman of the committee examines it with much gravity, and with as much intelligence as if he were trying to decipher the hieroglyphics on an Egyptian monument. The petition may be for a bank in Boston, and the chairman of the committee may happen to be a politician from the interior of the State, specially selected for his peculiar fitness to preside over the committee, because entirely unacquainted with business men and with banking. His impartiality may therefore be taken for granted, and he should be presumed to have no prejudices nor previously-formed opinions on the subject that would prevent him from adopting such views as parties interested may wish him to sustain.

There is never any trouble in getting a complete subscription-list for the stock of a new bank, as it is not necessary either that the parties who subscribe should take the stock, or that they should furnish any money to pay for their subscription if they do take it. If the petition for the charter is granted before the new bank can be organized, money will probably have become scarce in consequence of the previous rise of prices. And the scarcity will be increased by withdraw.

Digitized by Google

ing money from other uses, to pay in as capital for the new bank; that is to say, so far as any money is paid in for the new capital. Fortunately, there are some subscribers to almost every new bank, who prefer to pay in the money for their subscriptions.

It is not necessary that any money should be paid by the subscribers of the capital stock of a new bank. Their subscriptions can be paid by checks drawn on the new bank, and the discounts, made on the same day for the parties who have drawn the checks, being placed to their credit, will make the checks good. Or, the checks may be drawn on another bank, and the notes of the new bank paid out for the discounts made on the same day, being deposited at the other bank, will make those checks good. If the checks are sent to the other bank on which they are drawn, and payment demanded at the coun-

ter, they must by law, be paid in cash or in their notes.

The statement of the condition of a new bank established in this way, without the actual payment of any money by the subscribers of the capital stock, would show, at the close of business on the first day, that "the capital" had all been paid in according to law. It would also show a considerable amount on hand of "the bills of other banks," which had been received for checks drawn on other banks to pay for subscriptions to the capital. And these notes of other banks, being payable on demand in specie, can be called "specie funds." Besides, there would be a respectable "loan," amounting perhaps to one half more than the capital, consisting of the notes that have been discounted for the directors, the subscribers, and other friends of the new bank. Moreover, there would appear a large "amount of deposits," considering that the bank has been in operation only one day, consisting for the most part of the excess of the discounts that have been made beyond the amount paid for checks drawn to pay for subscriptions to the capital stock. The notes of the bank, paid out for checks drawn against deposits, will have made "the circulation" a fair one, and it will be daily increased by the efforts of the various friends of the new bank to get the notes into general circulation by paying them out in small sums, and in distant places. Some of them will be sent to Michigan and other distant States, where they will circulate for a time. But, in such cases, they are usually sent back again "to plague the inventors," just at the times when it is most inconvenient to the bank to see them return. The shares of the capital stock of this new bank can also be used by the subscribers as security for loans of money from savings banks, trust companies, and other institutions that never make loans without a pledge of stocks, in addition to personal securities. Among the assets of savings banks, there are usually found a large amount of the stocks of new banks held as security for loans.

Thus, it may be that not one dollar of actual money has been paid into this new bank for its capital. All that is necessary to establish such a bank is an act of incorporation. "There is no difficulty in setting a bank in operation with no capital. The character of such a bank rests entirely on the character and responsibility of the debtors to the bank. If managed with prudence and skill, no difficulty

occurs. But such institutions, under the best management, are not the proper basis of a general circulating medium."\*

The present system of currency, consisting of a constantly fluctuating amount of paper money, is an unjust one. The artificial wealth which it creates, is unfavorable to labor and to capital. It gives a fictitious and uncertain value to property of every kind, which enables the adroit and skillful speculator to take undue advantage of his neighbor. And it robs labor of a portion of its just earnings by increasing the cost of the necessaries of life, thereby depriving the laborer of many of those articles which he would enjoy with a sounder currency. "It is a mistaken idea that there is any antagonism between labor and capital. They are mutually dependent on each other, and mutually helpers of each other; and he is no friend to the general interests of the state, or to any portion of the people, who would strive to foment

a spirit of hostility between them." †

Capital supplies the raw materials, the tools, the shelter, and the food for labor, until its products are completed and disposed of, when it is paid back by their sale. Examine, for example, the investment of the capital of one of our great manufacturing corporations. It is invested in the buildings and machinery which are for the shelter and the tools of the persons who perform the labor, in the necessary stock of raw materials, and in the wages for their work until it is completed and sold. Those persons who perform the labor, agree to take, as wages or salaries, specified and fixed sums for their share of the products. Whatever there may be over, when the products are sold, goes to replace the capital employed, and for profit to the owners of it. If this is a fair statement of the arrangement between capital and labor, and if the arrangement is fairly carried out, the interests of both are identical. But if, after this arrangement is made, an inflation of the currency is produced by additional issues of paper-money, by which the prices of all articles are enhanced, the share of the profits which goes to the owners of the capital will be greatly increased, while the value of that which those who perform the labor have agreed to take as wages or salaries will be greatly diminished by the increased cost of the various supplies needed for the support of their families.

The most simple way to deprive the mechanics and the laborers of their rightful share in the general prosperity of the country, would be to reduce their wages; and it would be the fairest because it would be readily understood. But an increase of the amount of money in circulation, which will increase the prices of all kinds of commodities, is quite as effectual, and more easily accomplished, because it is not so quickly comprehended. What great difference can it make to the mechanics and laborers, whether the amount of their wages is reduced, or whether the cost is increased of the food, clothing, rent, and other supplies for their support? It is said they are "as well off" when prices are advanced, because they get more for their labor. But that is not true. Commerce regulates, to some extent, the price of labor.

† Gov. Clifford's Message, 1853.

<sup>\*</sup> Hon. Nathan Appleton.

The first maxim of trade is, to buy where goods are cheapest. If the price of labor is advanced, the cost of production will be increased, and the merchant will then find it more profitable to import goods than pay higher wages for labor to manufacture them at home. For that reason, and because the profits of manufacturing depend as well upon distant as upon local commerce, wages do not rise in proportion to other things when the currency is extended. Adam Smith has devoted many pages of his "Wealth of Nations" to an explanation of the causes why the wages of labor do not rise equally with other things, when a general rise of prices occurs. He takes it for granted that no one can honestly doubt the fact that wages do not rise equally with other things. The manufacturer, the trader, and the merchant increase their profits for a time, by the high prices produced by an expansion of the currency; but the same prices for labor will not supply the same quantities of those necessaries and conveniencies, which the laboring classes have been accustomed to have. This produces discontent; and then commence those "strikes" among workmen, which always occur during seasons of speculation and high prices.

The capital in a country may be distributed in the possession of many persons. Much of it may be possessed by the laborers themselves, as it is in the United States. Or it may be in large masses in the possession of a few individuals, as it is generally in Great Britain. In either case, the capital is necessary to the industry of the country, for it furnishes the necessary support of labor until its products are prepared for sale and ready for use. Active capital consists of many different kinds of property, and portions of it in the possession of individuals are constantly varying in form by exchanges, or sales and purchases. The possession of such capital is the possession of the tools and machines to employ, and of the means to support, for a given time, those who perform a certain quantity of labor.

All labor must derive its support from capital in the possession of the laborer or of his employer, until the labor is completed, and until the object of the labor is ready for sale. No income can be derived legitimately from capital, except by employing it directly or indirectly for the support of industry. Is it expedient, therefore, to sanction the use of an artificial money or capital, that will give its possessor the power to control the supplies necessary for the support of labor?

The Bill of Rights says: "No man, or corporation, or association of men has any other title to obtain advantages, or particular and exclusive privileges distinct from the community, than what arises from the consideration of services rendered to the public." Banks now acquire, under their charters, the right to issue their promises to pay money on demand, to be used as currency or money. This is a right which is withheld from all other persons. What services have the banks rendered to the public to entitle them to the particular and exclusive privilege of furnishing the currency? What is it but a monopoly to say to one set of citizens, You may issue promises to pay money on demand under certain restrictions, to be used as money by the community, and to refuse this right to issue such promises to another set of citizens, who ask for it on exactly the same conditions?

Original from UNIVERSITY OF CHICAGO

If it is not the intention to establish bank monopolies, but to treat all the citizens of the commonwealth alike, why should not banks, and all other business corporations be, as far as it is possible, established under general laws, which should be free to all who choose to avail of their provisions, and to conform to their restrictions? There are now on the statute-book in Massachusetts, general laws for the establishment of banks, and of business corporations. If those laws are not perfect, render them so by additional legislation, and require new banks and new business corporations to be formed under them, instead of granting special acts; and amend the laws affecting the existing banks and corporations established by special acts, so that they may conform to the general laws for the establishment of similar corporations.

The amount of taxes paid by the banks is by some considered a fair remuneration to the State for the privileges granted by their charters. That the tax on the banks is not excessive, is evident from the eagerness with which many of them have recently been asking to increase the amount of their taxes, by enlarging their capitals, and from the constant applications to the Legislature for new banks. The amount of their dividends proves that they can well afford to pay the bank-tax. The wisdom of this mode of taxation may be doubted; it is somewhat analogous to the exploded systems of farming taxes,\* and of selling monopolies; and it is an indirect mode of taxing the labor and enterprise of the country, rather than the property.

Laws providing for any changes that will improve the currency and affect property, should be prospective. Ample time ought to be afforded to make the necessary preparations, so that the public may suffer as little inconvenience as is possible. With regard to any changes affecting the currency, particular care should be taken to select the proper time. They should not be urged when the banks are pressed by an active demand for specie, to meet which all their resources may be required. This would temporarily increase the difficulty to the banks and the pressure on the trading portions of the community. Nor should it be attempted at the time when the banks, by increasing their loans and circulation, have commenced another inflation of the currency. Because the change to a decline of prices, and the scarcity of money which would follow, may at such a period be ascribed to the change of the laws. The best time to reinforce the currency, and to make any changes in the laws affecting it, with a view of rendering the currency more stable and uniform in value, will be, after the banks are relieved from a pressure consequent upon a previous inflation of the currency. Probably no better time will ever occur to commence it, and to improve and invigorate the currency, than during this present year of 1855. The severe pressure in the money market of the previous year has diminished the loans and circulation of the banks, has

<sup>\*</sup> It is customary in some countries for the government to farm the revenues—the taxes, imposts, or excise—to individuals, generally rich bankers, who collect them, and pay to the government an amount agreed upon beforehand, or a percentage of the amount collected.

increased their amounts of specie, has reduced the foreign exchanges below the rates which render the export of specie profitable, and has checked the importations of the products of foreign labor. An improved currency would do much to obviate the complaints of the interference of foreign labor with our domestic industry, for it would strike at the root of the difficulty which causes those complaints.

In proportion to the population, the aggregate of property in the United States probably exceeds that of any other country, if in the estimate of property, the banks and stocks and government debts are omitted, which are only evidences of debt from one portion of the people to another, and therefore do not add to the wealth of the country. The property in our country is spread over a greater surface than in Europe, being more subdivided and in the possession of greater numbers, instead of being concentrated in large masses in the possession of a few. Our commerce, both foreign and domestic, now exceeds that of any country in the world, except Great Britain. With the precious metals in large quantities from California, and from other quarters, which that commerce brings into the country, and with a rapidly-increasing population devoted to industrial and productive pursuits, the United States, if possessed of a currency of a substantial character, should become the actual, as they are the geographical centre of the monetary affairs of the civilized world. Now, their monetary affairs are controlled by the policy of the Bank of England, and the condition of the London money market. All that is needed to render the country as independent of Europe in its financial concerns, as it is in its political relations, is to have a larger amount of the wealth of the country invested in the precious metals to be used for currency instead of the paper money that is now substituted for them. The gold and silver of the country, which are now annually exported to be exchanged for the products of foreign labor. would then be retained in the country, and supply a substantial currency, to be used by our own people, in the conduct of the proper business of our own community.

The export of specie from the United States during the last four years has been one hundred and eighty-five millions of dollars. The estimate of the amount of bank-notes in circulation in November, 1854. was one hundred and seventy-one millions of dollars. The banknotes are certainly a cheap currency, for it does not cost much to manufacture them. It is in consequence of their use instead of coin. for money, that so much gold has been sent abroad, and the products of foreign labor brought back in exchange for it. If coin had been used instead of bank-notes, during the last four years, a great part of the gold that was exported would have been retained in the country, and would be at this time so much addition to the substantial wealth of the country. It may therefore be said that the use of the banknotes instead of coin, for money, during those four years, has cost the community an amount in gold more than equal to all the bank-notes

in circulation throughout the United States.

The States of Massachusetts, Connecticut, and Rhode-Island are now the great manufacturers of banks and paper-money. In proportion to population, the capital and circulation of the banks, in each of these States, is more than double that of any other State in the Union. During the last war with Great Britain, when the New-England States alone possessed a specie currency, they were the centre of the commerce, and, in a great measure, controlled the trade of the country; and when the United States possess a stable and substantial currency of the precious metals, in connection with their other great commmercial advantages, they will become the commercial centre, and may control, in a great measure, the commerce of the world.

The national government has already done its part to effect the necessary reform of the currency. All that remains to be done is, that the State governments should follow the example, by enacting intelligent and judicious laws for the purpose of introducing gradually the change to a sounder condition of currency. Some of the States have already commenced it, but none have done less towards it than the New-England States. The first step in this reform may be, to require all banks to be organized under a general banking law, which would take from them the unpopular stigma of monopolies, and would require the notes used for circulation to be obtained from State officers, and government stocks to be pledged for them, thereby giving to the government of the State a proper security over the currency of circulation.

The issue of all bank-notes of a smaller denomination than ten dollars should be prohibited. Gold and silver would be immediately substituted for them, with great advantage to the public, and without inconvenience at this time, when large quantities of gold are sent abroad, because there is no use made of it at home. Having gone thus far, if it were found that the benefits of increased stability and uniformity in the currency were obtained, and that there existed a sufficient amount of money for the proper conduct of the business of the community, and increased facility in borrowing money at the legal rates of interest—and such would certainly be the result—it might be well then to consider, whether for remittances and for payments of large sums, checks and drafts could not be substituted without inconvenience, and perhaps with some benefit, for many of the purposes for which bank-notes of large denomination are now used. And, in fact, whether any paper-money for general circulation, is beneficial to the public or to any body, except the individuals or corporations that issue it.

The effect of withdrawing from circulation the bank-notes of a denomination below ten dollars, would be to produce a temporary reduction of the amount of money in circulation. This would cause a corresponding decline in the price of merchandise. Such a decline of prices would diminish for some time the inducements to import foreign merchandise, and leave the precious metals which are now exported to pay for them, to supply the place of the small notes withdrawn from circulation. The decline of prices being a general one, would tend to stimulate the domestic industry of the country by diminishing the cost of production; and the consumption of the products of domestic industry would be increased by the lower prices at which they could

be afforded. There would still remain the annual supply of imported necessaries and luxuries, which are paid for by the exports of the surplus products of the country—the cotton, tobacco, flour, and other articles. And the demand for these and other domestic products to export would be stimulated and increased by the necessity of exporting them to pay for the foreign imports, when the specie of the coun-

try could no longer be used for that purpose.

an evil and an injury to the community.

A considerable proportion of the wealth of the country, at any given period, consists of those commodities which are consumed by use, such as articles of food and clothing, of which by far the greater part, particularly such as are usually deemed necessaries of life, are the products of domestic industry, while those articles that are less necessary, and which are usually considered as luxuries, are imported from abroad. This is particularly true with regard to the United States, where the diversity of soil and climate, and the active industry of the people, supply most of the wants of the community. Low prices would not diminish the quantity of those common necessaries of life which are supplied by domestic industry, but, on the contrary, would tend to increase their supply by diminishing the cost of producing them. The low prices, caused by the use of the precious metals for currency, would reduce only the supply of imported luxuries, as the gold that is now exported to pay for them would be required to take the place of the paper-money withdrawn from circulation. That gold would thereby become a part of the permanent wealth of the country. It would be an addition to the wealth of the country that would contribute to the benefit of all classes of the community, and, most of all, to the benefit of those who live on wages and salaries.

To diminish for a few years the supply of imported luxuries, is, in truth, the only sacrifice required to secure to the country a permanent and substantial currency of real money, in place of the paper-money that is now used. The benefits of it would extend to the whole public, whereas the paper-money, which now constitutes almost our whole currency, in the New-England States, benefits only the comparatively few who are connected with the banks that supply it, and operates as

The currency of a country, when it consists of real money, operates as a just and natural regulator, and controls the extent of business. If the country is prosperous, the currency expands, because the prosperity being the result of the profitable employment of the people, increases the amount of money in circulation, and diffuses it among the industrious and the enterprising. The prices of commodities and the extent of business are always influenced by the amount of money in circulation; therefore, when the currency consists of real money, the increased quantity of money in circulation, and the rise of prices are indications of increased proserity. Such an increase of money and of ability to purchase are not artificial. They cause prices to rise, and encourage and strengthen all branches of industry. If at any time that effect becomes excessive, the demand for specie to export, which it produces, will gradually contract the currency by diminishing the amount of it, and thereby gradually reduce prices and business to just, natural, and proper limits.

The amount of paper money in circulation is not controlled by any general principles or laws. From its very nature it must be constantly fluctuating in amount, and the changes must be comparatively abrupt and excessive. The increase of it stimulates business, and produces sudden and artificial enchancement of prices; but the quantity of it is usually diminished even more suddenly and unexpectedly than it was increased, causing often bankruptcy and ruin to many.

It has been well remarked that the measure of influence and of actual power is not so much to be reckoned by that which is seen and known to be exerted, as by what is supposed to be held in reserve. So the power of currency or money should be, under the control of good laws, not so much in the common and daily power of usefulness that is exerted, but in its actual reserves of power and resources to meet any emergencies. No machine or engine can always be kept in movement at the highest tension of all its faculties and powers. The unreasonable strain would break down the most powerful combinations of materials, if the exertion at all times was fixed at the highest possible capacity and speed. Yet such are precisely the conditions required by the admirers and advocates of our present banking system. It is the very quality for which they admire it. Our banking system is perfect, they say, because under it not one single dollar of coin-or of credit can exist in the community that we cannot lay our hands upon and borrow at some rate or other; leaving no reserves of currency for the unforeseen events or accidents of foreign or domestic commerce—for the possible effects of short or over-abundant harvests-for the sudden breaking out of war, or the equally sudden conclusion of peace; for the expansions and contractions of speculative business seasons, that must, under any system, occasionally occur; for innumerable contingencies in all parts of the world, which may suddenly become known, and seriously operate upon the money and currency of all commercial nations.

The object of these pages is to protest against the doctrines and conclusions of those who proclaim our method of banking and currency to be the best in the world, to the end that the evils and disadvantages of the existing system may be examined and remedied. Perhaps in the present interval between the extravagant speculations of past years, and the projects of future adventures, it may happen that public attention will be attracted to the important questions that have been considered, and that grave discussion may be excited in respect to them, and some practical and useful results may be obtained.

If the writer of these few and imperfect pages shall have contributed facts, arguments, or opinions to aid in the establishment of a more complete and rational system of banking and currency, he will have accomplished his object. Such views as have been set forth are not uncommon among our merchants. It is to be hoped that they may be maintained and upheld by more eloquent and practised writers, though they can hardly obtain the support of any one more sincerely convinced of their importance and truth than their present advocate.

# HISTORY OF MODERN MANIAS.

## I. Tulipomania. By Charles Mackay.

The tulip, so named, it is said, from a Turkish word, signifying a turban, was introduced into Western Europe about the middle of the sixteenth century. Conrad Gesner, who claims the merit of having brought it into repute—little dreaming of the commotion it was shortly afterwards to make in the world-says that he first saw it in the year 1559, in a garden at Augsburg, belonging to the learned Counsellor Herwart, a man very famous in his day for his collection of rare exotics. The bulbs were sent to this gentleman by a friend at Constantinople, where the flower had long been a favorite. the course of ten or eleven years after this period, tulips were much sought after by the wealthy, especially in Holland and Germany. Rich people at Amsterdam sent for the bulbs directly to Constantinople, and paid the most extravagant prices for them. The first roots planted in England were brought from Vienna in 1600. Until the year 1634 the tulip annually increased in reputation, until it was deemed a proof of bad taste in any man of fortune to be without a collection of them. Many learned men, including Pompeius de Angelis and the celebrated Lipsius of Leyden, the author of the treatise "De Constantia," were passionately fond of tulips. The rage for possessing them soon caught the middle classes of society, and merchants and shopkeepers, even of moderate means, began to vie with each other in the rarity of these flowers and the preposterous prices they paid for them. A trader at Harlaem was known to pay one half of his fortune for a single root, not with the design of selling it again at a profit, but to keep in his own conservatory for the admiration of his acquaintance.

One would suppose that there must have been some great virtue in this flower to have made it so valuable in the eyes of so prudent a people as the Dutch; but it has neither the beauty nor the perfume of the rose—hardly the beauty of the "sweet, sweet pea;" neither is it as enduring as either. Cowley, it is true, is loud in its praise. He says:

"The tulip next appeared, all over gay,
But wanton, full of pride, and full of play;
The world can't show a dye but here has place;
Nay, by new mixtures, she can change her face;
Purple and gold are both beneath her care,
The richest needlework she loves to wear;
Her only study is to please the eye,
And to outshine the rest in finery."

This, though not very poetical, is the description of a poet. Beckmann, in his *History of Inventions*, paints it with more fidelity, and in prose more pleasing than Cowley's poetry. He says: "There are few plants which acquire through accident, weakness, or disease,

so many variegations as the tulip. When uncultivated, and in its natural state, it is almost of one color, has large leaves, and an extraordinary long stem. When it has been weakened by cultivation, it becomes more agreeable in the eyes of the florist. The petals are then paler, smaller, and more diversified in hue; and the leaves acquire a softer green color. Thus this masterpiece of culture, the more beautiful it turns grows so much the weaker, so that, with the greatest skill and most careful attention, it can scarcely be trans-

planted, or even kept alive."

Many persons grow insensibly attached to that which gives them a great deal of trouble, as a mother often loves her sick and everailing child better than her more healthy offspring. Upon the same principle we must account for the unmerited encomia lavished upon these fragile blossoms. In 1634, the rage among the Dutch to possess them was so great that the ordinary industry of the country was neglected, and the population, even to its lowest dregs, embarked in the tulip trade. As the mania increased, prices augmented, until, in the year 1635, many persons were known to invest a fortune of 100,000 florins in the purchase of forty roots. It then became necessary to sell them by their weight in perits, a small weight less than a grain. A tulip of the species called Admiral Liefken, weighing 400 perits, was worth 4400 florins; an Admiral Van der Eyck, weighing 446 perits, was worth 1260 florins; a Childer of 106 perits was worth 1615 florins; a Viceroy of 400 perits, 3000 florins, and, most precious of all, a Semper Augustus, weighing 200 perits, was thought to be very cheap at 5500 florins. The latter was much sought after, and even an inferior bulb might command a price of 2000 florins. It is related that, at one time, early in 1636, there were only two roots of this description to be had in all Holland, and those not of the best. One was in the possession of a dealer in Amsterdam, and the other in Harlaem. So anxious were the speculators to obtain them, that one person offered the fee-simple of twelve acres of building-ground for the Harlaem tulip. That of Amsterdam was bought for 4600 florins, a new carriage, two gray horses, and a complete suit of harness. Munting, an industrious author of that day, who wrote a folio volume of one thousand pages upon the tulipomania, has preserved the following list of the various articles, and their value, which were delivered for one single root of the rare species called the Viceroy:

|                        |       |  |  |   | E'C | torins. |
|------------------------|-------|--|--|---|-----|---------|
| Two lasts of wheat,    |       |  |  |   |     | 448     |
| Four lasts of rye, .   |       |  |  |   |     | 558     |
| Four fat oxen, .       |       |  |  |   | . 4 | 480     |
| Eight fat swine, .     |       |  |  |   | . : | 240     |
| Twelve fat sheep, .    |       |  |  |   |     | 120     |
| Two hogsheads of win   | e,    |  |  |   |     | 70      |
| Four tuns of beer,     |       |  |  | • |     | 32      |
| Two tuns of butter,    |       |  |  |   |     | 192     |
| One thousand lbs. of c | heese |  |  |   |     | 120     |
| A complete bed         |       |  |  |   |     | 100     |
| A suit of clothes, .   |       |  |  |   |     | 80      |
| A silver drinking-cup, |       |  |  |   |     | 60      |
| ,                      |       |  |  |   | _   |         |
|                        |       |  |  |   | 2   | 500     |

People who had been absent from Holland, and whose chance it was to return when this folly was at its maximum, were sometimes led into awkward dilemmas by their ignorance. There is an amusing instance of the kind related in Blainville's Travels. A wealthy merchant, who prided himself not a little on his rare tulips, received upon one occasion a very valuable consignment of merchandise from the Levant. Intelligence of its arrival was brought him by a sailor, who presented himself for the purpose at the counting-house, among bales of goods of every description. The merchant, to reward him for his news, munificently made him a present of a fine red herring for his breakfast. The sailor had, it appears, a great partiality for onions, and seeing a bulb very like an onion lying upon the counter of this liberal trader, and thinking it, no doubt, very much out of its place among silks and velvets, he slily seized an opportunity and slipped it into his pocket, as a relish for his herring. He got clear off with his prize, and proceeded to the quay to eat his breakfast. Hardly was his back turned when the merchant missed his valuable Semper Augustus, worth three thousand florins, or about 280l. sterling. The whole establishment was instantly in an uproar; search was everywhere made for the precious root, but it was not to be found. Great was the merchant's distress of mind. The search was renewed, but again without success. At last some one thought of the sailor.

The unhappy merchant sprang into the street at the bare suggestion. His alarmed household followed him. The sailor, simple soul! had not thought of concealment. He was found quietly sitting on a coil of ropes, musticating the last morsel of his "ouion." did he dream that he had been eating a breakfast whose cost might have regaled a whole ship's crew for a twelvementh; or, as the plundered merchant himself expressed it, "might have sumptuously feasted the Prince of Orange and the whole court of the Stadtholder." Anthony caused pearls to be dissolved in wine to drink the health of Cleopatra; Sir Richard Whittington was as foolishly magnificent in an entertainment to King Henry V.; and Sir Thomas Gresham drank a diamond dissolved in wine to the health of Queen Elizabeth, when she opened the Royal Exchange; but the breakfast of this roguish Dutchman was as splendid as either. He had an advantage, too, over his wasteful predecessors: their gems did not improve the taste or the wholesomeness of their wine, while his tulip was quite delicious The most unfortunate part of the business for with his red herring. him was, that he remained in prison for some months on a charge of felony preferred against him by the merchant.

Another story is told of an English traveller, which is scarcely less ludicrous. This gentleman, an amateur botanist, happened to see a tulip-root lying in the conservatory of a wealthy Dutchman. Being ignorant of its quality, he took out his penknife, and peeled off its coats, with a view of making experiments upon it. When it was by this means reduced to half its size, he cut it into two equal sections, making all the time many learned remarks on the singular appearance of the unknown bulb. Suddenly the owner pounced upon him, and with fury in his eyes, asked him if he knew what he

had been doing? "Peeling a most extraordinary onion," replied the philosopher. "Hundert tausend duyvel!" said the Dutchman; "it's an Admiral Van der Eyck." "Thank you," replied the traveller, taking out his note-book to make a memorandum of the same: "are these admirals common in your country?" "Death and the devil!" said the Dutchman, seizing the astonished man of science by the collar; "come before the syndic, and you shall see." In spite of his remonstrances, the traveller was led through the streets followed by a mob of persons. When brought into the presence of the magistrate, he learned, to his consternation, that the root upon which he had been experimentalizing was worth four thousand florins; and, notwithstanding all he could urge in extenuation, he was lodged in

prison until he found securities for the payment of this sum.

The demand for tulips of a rare species increased so much in the year 1636, that regular marts for their sale were established on the Stock Exchange of Amsterdam, in Rotterdam, Harlaem, Leyden, Alkmar, Hoorn, and other towns. Symptoms of gambling now became, for the first time, apparent. The stock-jobbers, ever on the alert for a new speculation, dealt largely in tulips, making use of all the means they so well knew how to employ, to cause fluctuations in prices. At first, as in all these gambling mania, confidence was at its height, and every body gained. The tulip-jobbers speculated in the rise and fall of the tulip stocks, and made large profits by buying when prices fell, and selling out when they rose. Many individuals grew suddenly rich. A golden bait hung temptingly out before the people, and one after the other, they rushed to the tulipmarts, like flies around a honey-pot. Every one imagined that the passion for tulips would last for ever, and that the wealthy from every part of the world would send to Holland, and pay whatever prices were asked for them. The riches of Europe would be concentrated on the shores of the Zuyder Zee, and poverty banished from the favored clime of Holland. Nobles, citizens, farmers, mechanics, seamen, foot-men, maid-servants, even chimney-sweeps and old clotheswomen dabbled in tulips. People of all grades converted their property into cash, and invested it in flowers. Houses and lands were offered for sale at ruinously low prices, or assigned in payment of bargains made at the tulip-mart. Foreigners became smitten with the same frenzy, and money poured into Holland from all directions. The prices of the necessaries of life rose again by degrees; houses and lands, horses and carriages, and luxuries of every sort, rose in value with them, and for some months Holland seemed the very antechamber of Plutus. The operations of the trade became so extensive and so intricate, that it was found necessary to draw up a code of laws for the guidance of the dealers. Notaries and clerks were also appointed, who devoted themselves exclusively to the interests of the trade. The designation of public notary was hardly known in some towns, that of tulip-notary usurping its place. In the smaller towns, where there was no exchange, the principal tavern was usually selected as the "show-place," where high and low traded in tulips, and confirmed their bargains over sumptuous entertainments. These

dinners were sometimes attended by two or three hundred persons, and large vases of tulips, in full bloom, were placed at regular intervals upon the tables and sideboards for their gratification during the

At last, however, the more prudent began to see that this folly could not last for ever. Rich people no longer bought the flowers to keep them in their gardens, but to sell them again at cent per cent profit. It was seen that some body must lose fearfully in the end. As this conviction spread, prices fell, and never rose again. Confidence was destroyed, and a universal panie seized upon the dealers. A had agreed to purchase ten Semper Augustines from  $B_{ij}$ at four thousand florins each, at six weeks after the signing of the contract. B was ready with the flowers at the appointed time; but the price had fallen to three or four hundred florins, and A refused either to pay the difference or receive the tulips. Defaulters were announced day after day in all the towns of Holland. Hundreds who, a few months previously, had begun to doubt that there was such a thing as poverty in the land, suddenly found themselves the possessors of a few bulbs, which no body would buy, even though they offered them at one quarter of the sums they had paid for them. The cry of distress resounded everywhere, and each man accused his neighbor. The few who had contrived to enrich themselves hid their wealth from the knowledge of their follow-citizens, and invested it in the English or other funds. Many, who for a brief season, had emerged from the humbler walks of life, were cast back into their original obscurity. Substantial merchants were reduced almost to beggary, and many a representative of a noble line saw the fortunes of his house ruined beyond redemption.

When the first alarm subsided, the tulip-holders in the several towns held public meetings to devise what measures were best to be taken to restore public credit. It was generally agreed, that deputies should be sent from all parts to Amsterdam, to consult with the government upon some remedy for the evil. The government at first refused to interfere, but advised the tulip-holders to agree to some plan among themselves. Several meetings were held for this purpose; but no measure could be devised likely to give satisfaction to the deluded people, or repair even a slight portion of the mischief that had The language of complaint and reproach was in every been done. body's mouth, and all the meetings were of the most stormy character. At last, however, after much bickering and ill-will, it was agreed, at Amsterdam, by the assembled deputies, that all contracts made in the height of the mania, or prior to the month of November, 1636, should be declared null and void, and that, in those made after that date, purchasers should be freed of their engagements, on paying ten per cent to the vendor. This decision gave no satisfaction. The vendors who had their tulips on hand were, of course, discontented, and those who had pledged themselves to purchase, thought themselves hardly treated. Tulips which had, at one time, been worth six thousand florins, were now to be procured for five hundred; so that the composition of ten per cent was one hundred florins more than

the actual value. Actions for breach of contract were threatened in all the courts of the country; but the latter refused to take cognisance

of gambling transactions.

The matter was finally referred to the Provincial Council at the Hague, and it was confidently expected that the wisdom of this body would invent some measure by which credit should be restored. Expectation was on the stretch for its decision, but it never came. The members continued to deliberate week after week, and at last, after thinking about it for three months, declared that they could offer no final decision until they had more information. They advised, however, that, in the mean time, every vendor should, in the presence of witnesses, offer the tulips in natura to the purchaser for the sums agreed upon. If the latter refused to take them, they might be put up for sale by public auction, and the original contractor held responsible for the difference betwen the actual and the stipulated price. This was exactly the plan recommended by the deputies, and which was already shown to be of no avail. There was no court in Holland The question was raised in Amsterwhich would enforce payment. dam, but the judges unanimously refused to interfere, on the ground that debts contracted in gambling were no debts in law.

Thus the matter rested. To find a remedy was beyond the power of the government. Those who were unlucky enough to have had stores of tulips on hand at the time of the sudden reaction were left to bear their ruin as philosophically as they could; those who had made profits were allowed to keep them; but the commerce of the country suffered a severe shock, from which it was many years ere it

recovered.

The example of the Dutch was imitated to some extent in England. In the year 1636 tulips were publicly sold in the Exchange of London, and the jobbers exerted themselves to the utmost to raise them to the fictitious value they had acquired in Amsterdam. In Paris, also, the jobbers strove to create a tulipomania. In both cities they only partially succeeded. However, the force of example brought the flowers into great favor, and amongst a certain class of people tulips have ever since been prized more highly than any other flowers of the field. The Dutch are still notorious for their partiality to them, and continue to pay higher prices for them than any other people. As the rich Englishman boasts of his fine race-horses or his old pictures, so does the wealthy Dutchman vaunt him of his tulips.

In England, in our day, strange as it may appear, a tulip will produce more money than an oak. If one could be found rara in terris, and black as the black swan of Juvenal, its price would equal that of a dozen acres of standing corn. In Scotland, towards the close of the seventeenth century, the highest price for tulips, according to the authority of a writer in the supplement to the third edition of the Encyclopedia Britannica, was ten guineas. Their value appears to have diminished from that time till the year 1769, when the two most valuable species in England were the Don Quevedo and the Valentinier, the former of which was worth two guineas and the latter two guineas and a half. These prices appear to have been the minimum.

In the year 1800, a common price was fifteen guineas for a single bulb. In 1835, a bulb of the species called the "Miss Fanny Kemble" was sold by public auction in London for seventy-five pounds. Still more remarkable was the price of a tulip in the possesion of a gardener in the King's Road, Chelsea: in his catalogues it was labelled at two hundred guineas.

## LONDON AND WESTMINSTER BANK.

## HOLBORN BRANCH.

Ir is gratifying to notice, from time to time, in the metropolis, the exemplary proceedings of many of our wealthy London firms in improving their premises, so as to conduct their business both systematically and sanitarily. In the new building which has just been completed for the London and Westminster Bank, (the parent of all the joint-stock banks,) in Holborn, we are happy to recognize the vigor of the Directors, and the prudence which has dictated so judicious an outlay. Those who kept their accounts at this branch a year or two ago, will remember the stifling air which met them on opening the shop-door of the old place—ceiling about ten feet high—gas burning all day—dirt, darkness, and discomfort everywhere—unfit even for the passing visit of a customer, and most obnoxious to the health of the employes doomed to inhale the fetid atmosphere daily for eight or nine hours. A healthful change has, however, been made. We now enter, through doors of British oak, one of the handsomest and most convenient offices in London; giving immediately an impression of ample space, abundant light, and proper ventilation; the temperature being so even, without draught, that the thermometer varies but three degrees in the course of the day. In the general arrangement of the business department, Mr. Henry Baker, the architect, availed himself of various useful hints in Mr. Gilbart's "Prize Essay on Banking," and carried out the work under the superintendence of a Local Committee of Directors, and with the assistance of the able manager, Mr. William Ewings. The counters, desks, and fittings are all of the finest oak and Spanish mahogany. The basement story is fire-proof, and almost wholly occupied by seven large strong-rooms, classed and arranged, to contain money and securities, plate-chests, title-deeds, etc. In one room are about thirty wroughtiron lockers, of beautiful workmanship, each with a patent lock, adapted for the use of customers who may choose to retain their own key. The several apartments are warmed by hot water, lighted by gas, thoroughly free from damp, and well ventilated. One apartment, with open fire-place and external light, is set apart for the use of the legal profession, who may avail themselves of the opportunity of keeping their clients' papers and deeds in a place of perfect security; and of examining such documents when occasion requires, without further trouble than merely removing the box containing them from the strong-room to the apartment referred to. This is a great convenience, and well worthy the attention of those prudent attorneys who dread a fire, for which no policy of insurance can compensate. In conclusion, we cannot but express our satisfaction at this artistic improvement of our street architecture. The elevation is entirely of Portland stone, and in the Italian style, not fine or redundant in ornament, but with a happy effect produced by good proportion and wellstudied detail. The upper part is the private residence of the manager.

Mr. Henry Baker is the architect of this handsome pile, and Mr.

Myers the contractor.

The opening of this building affords an opportunity of presenting to our readers a sketch of the recent improvements that have taken place in the system of London banking. At the renewal of the Bank charter, in 1833, the Legislature enacted that banks with an unlimited number of partners might be established in London: accordingly, the London and Westminster Bank with a subscribed capital of £5,000,000 sterling, of which £1,000,000 have been paid up, was formed in the year 1834. This new establishment adopted several new principles in dealing with the public. Parties were allowed to lodge money upon interest even for short periods, so as to suit the convenience of those who had large sums of money waiting for investment. The same privilege was allowed to depositors of smaller sums, even so low as £10, in order to encourage habits of economy and prudence among the more humble classes. Those who wished for the convenience of a banker, without being under the necessity of keeping to their credits a large unproductive balance, were permitted to make arrangements accordingly; while the system of presenting charitable donations to the clerks, under the form of "Christmas money," was altogether prohibited. Soon afterwards another principle was adopted. Branches were established in London at a distance from the head-office. The necessity for this had arisen from the increased extent and population of London. It was observed that the previously-existing banks had been placed in clusters. Around the Royal Exchange there were numerous banks for the accommodation of merchants; along Fleet street there were others, for the use of the legal gentlemen who frequented the Temple; in the neighborhood of Charing Cross were others, patronized by the aristocracy of Westminster; while the extensive district of Bloomsbury was wholly destitute of banking accommodation. Nor was this a slight inconvenience. To the higher, and even to the middle classes of society, a banker is now almost a necessary of life. When a bank is established, those who have money, no longer lock it up in their cupboards, or conceal it in secret places, but send it to the bank, where it is safe from fire or thieves. Those who have large sums they wish to render productive, take them to the bank, and lodge them upon interest. They who wish for temporary advances, apply to the bank. They who are out of business, find that the banker's pass-book furnishes

them with a perfect register of their domestic expenditure. They who have valuable documents, as leases or life policies, can put them in a box, and commit them to the care of the banker; while the more wealthy, who have chests of plate which they wish to place in security, when they take their summer rambles on the Continent, have only to send them to the bank. At the same time, all classes have, in the person of their banker, a friend readily accessible, who will give them the best information as to the right way of conducting all their pecuniary transactions.

These advantages were supplied to the inhabitants of the district of Bloomsbury in January, 1836, when a branch bank, upon the new

system, was opened at No. 213 High Holborn.

Although this establishment is called "the Bloomsbury Branch," it has, in its relation to the public, the attributes of an independent bank. All the arrangements of the London and Westminster Bank tend to localize their branches, so as to give them as much as possible the character of independent institutions, combined with the additional security and accommodation to be obtained from a more extended and wealthy establishment.—Illustrated London News.

## NEW BANKS IN GERMANY.

## BANK OF NORTHERN GERMANY AT HAMBURG.

THE old Bank of Hamburg was established in 1619, and but a few inconsiderable amendments of the original charter have since been made. An establishment, answering the demands of a commercial community about two hundred and fifty years ago, does not suit our present age of progress, and a desire for the alteration of the old charter was repeatedly expressed, however without success. Credit is unknown to the old Bank of Hamburg; the deposits are to be made in silver bars, kept in the vaults of the bank, payments and receipts by transfer from one account to another, thus preventing a circulation of money instead of stimulating the same. The business of discounting notes is exclusively in the hands of large bankers and capitalists, who command the market, and therefore have always been opposed to any change for the better. Temporary discount banks have repeatedly been opened during financial crises, but no sooner the crisis was over, these establishments disappeared. Lately, however, a more liberal feeling prevails among some of the leading mercantile firms of Hamburg; and during the month of June last a committee was appointed for the establishment of a regular discount bank; the members of that committee are Messrs. I. C. Godefroy, Robert Kayser, F. I. Tesdorpf, and Edgar Ross.

The following is the prospectus of the new bank:

A stock company is organizing at Hamburg under the name of "Norddeutsche Bank in Hamburg," (Bank of Northern Germany,) for the purpose of associating large sums of money for the promotion of commerce and industry. The time of existence to be fixed for 99 years; the capital to be 15 millions marks banco, provided for by the issue of 30,000 shares at 500 marks each. The capital to be increased to 30 millions marks banco. As soon as thirty per cent of the capital is paid in, the bank will begin its operations. No stockholder to be liable for a larger amount than the nominal value of the shares subscribed for.

The business transactions of the bank are: 1. To discount notes, to buy and sell drafts. 2. To buy and sell coin or paper money, also silver bars. 3. To receive deposits of money and to pay interest on such, to issue bonds for the same, or to open accounts with the depositor. 4. To make advances on stocks and bonds, notes and drafts, or gold, silver, and merchandise, to any amount not under 1000 marks banco. 5. To buy state securities, shares, and bonds of associations, and to resell the same. 6. To collect or to pay out money on account of third persons. 7. To receive for safe keeping money and other articles of high value. 8. To issue bank notes on principles to be fixed by by-laws.

The purchase of personal property and loans on mortgage are generally excluded; however, admitted to secure claims. The investments in state and other securities not to exceed one third of the capital paid in. The purchase of and loan on the shares of the bank

is prohibited.

The notes to be issued either in marks banco or in Prussian thalers, to be redeemed on sight, in cash, according to their denomination. One third of the amount of notes in circulation to be ready in specie, the balance in notes and drafts belonging to the bank. A statement to be published monthly, and a full report on the close of each financial year.

The business of the bank to be managed: 1. By the board of directors. 2. By the president and other officers. 3. By the meeting of the stockholders, to be held regularly once a year, but also to be called by 200 shareholders, representing 400 shares: 5 shares are entitled to one vote. The by-laws can be amended only by a majority of two thirds represented in a meeting.

The board of managers holds power to establish branches and

agencies

The accounts of the bank are kept in marks banco, five per cent of the net proceeds to form a fund of reserve; four per cent of the net proceeds to be divided among the shareholders; of the surplus, ten per cent to be divided proportionately among the first officers, the balance among the stockholders. A majority of three quarters of the votes to decide the winding up of the affairs. To the state government the right of superintending the bank is secured, and all the business of the state government to be transacted without any remuneration.

## BANKING IN NEBRASKA.

It has been until now supposed that Banking in Nebraska would be confined, for a few years at least, to throwing up banks of earth; but it seems the Legislature have already authorized the establishment of a concern that proposes to issue bills

## BANK CIRCULAR.

Ar a meeting of the stockholders of the Western Exchange Fire & Marine Insurance Company, held at the Douglas House, Omaha City, September 1, 1855, pursuant to the following notice in *The Nebraskian*, at Omaha City, to wit:

"The stockholders of the Western Exchange Fire & Marine Insurance Company will meet at Omaha City, in Douglas county, Nebraska Territory, on the first day of September next, between nine and eleven o'clock A.M., at the Douglas House, for the purpose of electing a Board of Directors.

"Omaha City, August 21, 1855."

Present—George Greene, Thomas H. Benton, Jr., Jesse Williams, William Kempton, James S. Izard, Le Roy Tuttle, and Calvin Graves; John Weare, Jr., and Byron Rice, by their proxy, George Greene; and Henn, Williams & Co., by their partner and proxy, Jesse Williams—and on motion of George Greene, Thomas H. Benton, Jr., was appointed President, and Le Roy Tuttle Secretary of said meeting.

On examination of the stock subscription-book, it appeared that the following persons had become the stockholders for the number of shares attached to their respective names, namely, Green, Weare & Benton, 100 shares; Greene & Weare, 75 shares; Henn, Williams & Co., 75 shares; L. R. Tuttle, 50 shares; Calvin Graves, 50 shares; Greene & Brother, 50 shares; Greene, Weare & Co., 25 shares; Greene, Weare & Rice, 50 shares; and James S. Izard, 25 shares; making in all 500 shares, or \$50,000, on which 40 per cent advance payment had been made.

On motion of George Greene, the following resolutions were unanimously adopted as by-laws and regulations preliminary to the election of a board of directors, agreeably to the provisions of an act to incorporate the Western Exchange Fire & Marine Insurance Company.

Resolved, That there shall be an annual meeting of the stockholders on the first Monday of September in each year after 1855.

Resolved, That the directors shall be elected at the annual meeting of the stockholders, and shall hold their offices until their successors are elected, unless removed by a three-fourths vote of stockholders.

Resolved, That the entire circulation shall at all times be at least twenty per cent less than the available assets of the corporation.

Resolved, That all notes circulating shall be promptly paid in gold or silver on demand at the counter, and that those non-resident stock-holders who are doing an exchange or banking business, shall and do hereby pledge themselves to receive the certificates or notes of this

institution at par, and shall give gold in exchange for the same at lower rates of premium than for notes of other banks in good standing.

Resolved, That the stockholders shall be and hereby acknowledge themselves individually responsible, in proportion to the amount of stock subscribed for all notes, certificates, and liabilities of the institution, and the directors and officers are hereby expressly enjoined to keep the notes, certificates, and liabilities of the Company, so that in the aggregate they shall be within the available means of the institution to adjust and pay the same in full, and should the officers disregard the foregoing instructions, they shall be personally liable to the Company to twice the amount of such excessive issue or indebtedness.

Resolved, That the capital stock of this Company be and is hereby increased to one hundred thousand dollars, as provided by the act of

incorporation.

Resolved, That the stock of this institution shall be transferable only to stockholders, and then only by consent of a majority of the directors.

Resolved, That the stock shall at all times be held responsible for

all indebtedness by the holder to the Company.

Resolved, That any vacancy in the board of directors may be filled by a majority of directors or by votes of a majority of stock shares.

Resolved, That each stockholder shall be entitled to one vote for each share of stock owned by him, and may vote either in person or by proxy.

Resolved, That the board of directors be authorized to prepare an additional set of by-laws for this corporation, which shall be in force when approved by two thirds of the directors, and at least by three fourths of the shares or stock.

On motion of Jesse Williams, the stockholders proceeded to the election of a board of directors by ballot, which resulted in the election of the following persons, namely, Thomas H. Benton, Jr., George Greene, Le Roy Tuttle, Jesse Williams, John Weare, Jr., James S. Izard, and J. Smith Hooton.

On motion of Jesse Williams it was resolved that the President and Secretary be authorized to order the proceedings of this meeting published, and two hundred and fifty copies thereof, in circular form, printed.

On motion the meeting adjourned, sine dic.

T. H. Benton, Jr., President.

## L. F. Tuttle, Secretary.

At a meeting of the Directors of the Western Exchange Fire & Marine Insurance Company, held at the Douglas House, September 1, 1855, at two o'clock P.M., Thomas H. Benton, Jr., was appointed President, Jesse Williams, Vice-President, and Le Roy Tuttle, Permanent Secretary of said institution.

On motion of George Greene, the President, Vice-President, and Secretary were appointed a committee to prepare a code of by-laws

and regulations to be reported at the next meeting.

On motion of George Greene it was resolved that the Secretary be

vested with the power and authority usually incumbent upon cashiers of banks under the general banking laws of the State of New-York.

The meeting then adjourned.

THOMAS H. BENTON, Jr., President.

LE ROY TUTTLE, Sceretary.

# AN ACT to incorporate the Western Exchange Fire & Marine Insurance Company.

SEC. 1. Be it enacted by the Council and House of Representatives of the Territory of Nebraska, That R. W. Latham, William Kempton, James S. Izard, J. McNeal Latham, W. E. Moore, Thomas H. Benton, Jr., and their associates, not to exceed thirteen in number, their heirs and assigns, are hereby constituted and declared a body corporate and politic with perpetual succession, under the name and style of the "Western Exchange Fire & Marine Insurance Company," with a capital stock of fifty thousand dollars, which may be increased, at the will of the stockholders, to any amount not exceeding five hundred thousand dollars, to be divided into shares of one hundred dollars each; and the said Company, under the above name and style, are hereby declared capable, in law, of dealing in exchanges of all kinds, to insure all kinds of property against loss or damage by fire, and to make all kinds of insurance against loss, whether happening on land or water, and to make such other insurance as they may deem proper or expedient, and to reinsure themselves against loss on any risk they may have taken, and generally to do and perform all matters and things necessary to carry out the objects above enumerated; and also to buy and possess property of all kinds, and the same to sell and dispose of at pleasure, to contract and be contracted with, to sue and be sued, to defend and be defended against, to plead and be impleaded, in all courts and places whatsoever, in all manner of actions, and may have a common seal, and the same to alter and change at pleasure.

SEC. 2. That the Company hereby created shall have power to cause books to be opened for the subscription of said stock in such manner and at such times and places as they may appoint, until the full sum of fifty thousand dollars is subscribed; and, in a reasonable time thereafter, the subscribers shall meet and choose their directors, seven in number, under such by-laws and regulations as the Company may adopt; first giving notice of such meeting in some newspaper printed in the city of Omaha, and county of Douglas, where the office of said Company is hereby permanently located.

SEC. 3. That the directors chosen by the stockholders of this Company shall, as soon as may be after their election, choose one of their number to act as a president, and one as vice-president. The president shall preside at all regular meetings of the board of directors hereby created, and in case of his absence or resignation, the vice-president shall preside, either of whom, with the secretary, shall sign all policies or contracts made by the board of directors, which policies or contracts shall be binding either with or without the seal

of said corporation, and the president shall do and perform such other acts and things as may be prescribed by the by-laws of the corporation.

SEC. 4. That for the transaction of the business and carrying out the objects of said Company, the board of directors hereby created shall have power to provide for the election of such officers at such times and places as may seem to them most expedient, and to prescribe

the duties and define the powers of all such officers.

SEC. 5. That the corporation hereby created shall have full power and authority to invest its capital and surplus funds in any funded debt created, or to be created, by or under any law of the United States, or any of the States, in mortgages on real estate, promissory notes, bills of exchange, and on bottomry and respondentia, to sell and transfer, change and reinvest the same as the directors may deem best to the interests of the Company, receive deposits, and, under such rules and regulations as may be prescribed by the by-laws of said Company, to issue certificates therefor.

SEC. 6. That the stock of said Company shall be considered personal property, and shall be transferable, according to such rules and under such restrictions as the board of directors may adopt; who shall have power at all times to adopt such by-laws, rules, and regulations as may be necessary to promote the interest of said Company, not inconsistent with the Constitution and laws of the United States

and of the Territory.

SEC. 7. This act shall be, and the same is hereby declared a public act; and all courts, judicial officers, and others exercising judicial powers under and by virtue of any laws of this Territory, shall judicially take notice of the same, and all the rights, powers, and authority hereinbefore enumerated and conferred, shall be exercised and enjoyed by said Company.

SEC. 8. This act shall take effect and be in full force from and

after its passage.

Approved March 16th, 1855.

## LEGAL MISCELLANY.

1. Promissory Notes. 2. Railroad Tax. 3. Railroad Bonds, Usury.

I. Promissory Notes—Insolvency.

Laban Crapon vs. Samuel S. Johnson.—This was an action before the Supreme Judicial Court of Massachusetts, on a note payable in Salem to a citizen of New-York.

The defendant pleaded his discharge in insolvency, and offered to prove that the note was given for goods brought into and sold in this State, that the note was made and delivered at Salem, and that the defendant did not then know that the plaintiff resided out of the Commonwealth.

SHAW, C. J. The Court are entirely unable to distinguish this case from that of Scribner vs. Fisher, (1853.) not yet reported, in which it was decided that a note payable here is discharged by a discharge in insolvency. This case is a little stronger than that. The contract was made and to be performed here. The defendant's liability on it is determined by the laws of this Commonwealth, and the discharge is a good defence, although the plaintiff resides in another State. On a careful examination, the Court are of opinion, that this point is not otherwise decided by the Supreme Court of the United States.

Exceptions sustained; new trial in this Court.

J. H. Wakefield for the plaintiff; O. P. Lord for the defendant.

# II. RAILROAD TAX IN KENTUCKY.—THE RAILROAD TAX IN HARDIN DECIDED CONSTITUTIONAL.

We learn that the case recently pending in the Hardin Circuit Court, of the Louisville & Nashville Railroad Company against the Hardin County Court, was decided on yesterday morning in favor of the Company. The decision is one of importance in itself, and still more so as, if it is not reversed, the constitutionality and validity of the county and city subscriptions to works of improvement are now sanctioned by the courts of justice. A summary of the points involved and decided may not be unacceptable to our readers.

The county of Hardin subscribed \$300,000 of stock in the Louisville & Nashville Railroad Company, and gave its bonds for a part of that subscription. The first installment of interest was duly paid; but on the second class of coupons maturing, the County Court refused to make provisions for their payment. Thereupon the Company applied to the Circuit Court for a mandamus to compel the County Court to make a levy to pay the installment of interest past due. This was resisted, on the ground that the Company's charter was unconstitutional and void, and, if valid, that its requirements had not been pursued. Each of these propositions was deemed untenable, and a mandamus was ordered as prayed for in the petition.

The opinion of Judge Kincheloe is spoken of as one of great and marked ability, reflecting the highest honor upon the talents and learn-

ing of that distinguished jurist.

The case was argued for the Company by Governor Helm and E. S. Worthington, Esq., and for the County by Hon. Elijah Hise. Gov. Helm spoke ably for six hours; Mr. Worthington's argument is spoken of as one of deep research and legal clearness.—Louisville Journal.

## III. RAILROAD BONDS-USURY.

At the late term of the United States Court in Indianapolis, an important decision was pronounced in the case of Valette against the Whitewater Canal Company. The contract upon which this suit was brought was made on the 2d of July, 1844, with a full session of nine Directors of the Board present, of whom eight voted for the contract. It specified that Valette was to finish twelve miles of Canal, between Connersville and Cambridge City, within one year, and furnish the

materials and labor at his own expense. The Company was to pay therefor, in bonds due ten years after date, bearing 7 per cent interest, and to be preferred over all the debts afterwards created by the Company.

The Company have, in the course of eleven years since these bonds were issued, paid in interest more than they originally cost the contractor, who took all the risk of the work, and they now seek to avoid

the payment of the principal on the plea of usury.

At that time the credit of the Company was very low. They were struggling to complete that part of the canal between Laurell and Connersville. The contract with Valette gave the Company credit, and finished the canal in a year. It gave a cash market for the produce of a fertile valley which before would not bear transportation, in consequence of its distance from market, and the badness of the road.

The great floods which have assailed the canal and three times in seven years almost destroyed it, have made the Company insolvent, and created many adverse interests among its creditors. These floods

had no precedents in Indiana.

Some three months since, Mr. Valette and the bondholders in New-York brought suit to wind up the Company and sell the canal and its franchises. The bondholders believed their rights settled by a former decision, (reported in 4th McLane,) when application was made for a Receiver to enforce payment of interest on these bonds. This case was ably argued by eminent counsel at the time, and every defense set up that the Company or their counsel then thought just and honorable.

In the present suit, the Court decided to hear a motion for Injunction and Receiver, the Company then demurring to plaintiff's bill. The day before the hearing, the Attorneys for the Company withdrew their demurrer and filed an answer, averring that Valette's contract was a device, to cover a usurious contract between him and the former Board of Directors. This answer was sustained in this particular by only one affidavit, that of A. B. Conwell, President of the Company, who makes oath that he is informed, and believes, that the Company had no right to sell their bonds for less than par—that their doing so was contrary to the charter of the Company and the laws of Indiana. That the contract was a device to evade the laws of Indiana, got up by one M. Helm and the former Board of Directors, and said Valette.

The plaintiffs, not anticipating this plea, had prepared no testimony. They say that the desperate condition of the Company requires that it should go into the hands of a receiver forthwith.

That the Company are so completely destitute of credit and money, that an injury of a few hundred dollars would suspend the navigation of the canal, to the damage of every interest connected with it.

The plaintiffs also believing that an adverse decision, on a motion for a receiver heard ex parte, would be no worse for them than a continuance under the circumstances named, allowed the case to go to court on the testimony of the defendants only. The court refused the injunction and receiver. Judge McLean was present.

Judge Huntingdon delivered the decision. He said that if, at the final trial, the Company would make good the allegation of decree, etc., that they would release the Company from the payment of the principal of the bonds. Thus, establishing, so far as the Court can do so, the principle that when canal and railroad companies sell their bonds for less than par, directly or indirectly, they are tainted with usury. This decision, if concurred in generally, will raise doubts as to the validity of many hundred millions of dollars of railroad bonds. Such a decision would be almost as bad as repudiation, and it is to be hoped that it will not be entertained by other courts.

We give below our usual table of the amount of cotton consumed the past year in the States south and west of Virginia, and not included in the receipts at the ports. We have decreased the estimate as a whole, from the year previous, but give it only for what it purports to be, an *estimate*, which we believe approximates correctness. Thus:

| ,                            |                         |         |         | 001    |
|------------------------------|-------------------------|---------|---------|--------|

Cotton Crop of the United States.

To which, if we add (for the past year) the stocks in the interior towns, (5000 bales,) the quantity detained in the interior, and that lost on its way to market, (unusually large the past year—about 25,000 bales,) to the crop as given above, received at the shipping ports, the aggregate will show, as near as may be, the amount raised in the United States the past season—say, in round numbers, 3,178,000 bales, (after deducting the 34,000 bales new crop received this year to 1st instant,) against 3,000,000 for the year 1853—1; 3,360,000 for the year 1852—3; 3,100,000 for the year 1851—2, and 2,450,000 for the year before.

In reference to the consumption of cotton in the country, the past year, both North and South, it will be seen that it has fallen off, although the production has been pretty nearly the same; this may be accounted for, primarily, by the partial failure of the crops of cereals in 1854, the consequent high prices of bread-stuffs and provisions, and the general pressure for money felt by all classes in all sections of the country.

The quantity of new cotton received at the shipping ports to the 1st September amounted to 34,079 bales, against 1890 last year; 716 in 1852-3, and 5125 the year before. Thus it will be seen that the quantity of new cotton received at the ports to 1st September, this year, is largely in excess of last year; but it is an admitted fact, that at that date there remained of last year's crop, (detained in the interior by low rivers, caused by an unprecedented drought,) a very large quantity, say 250,000 bales; some estimates are a little lower, but others even higher; and had the cotton thus detained been brought to market and added to last year's crop, it would have approximated the great crop of 1852-3; as it is, it will doubtless soon come forward and materially swell the aggregate for 1855-6, should not a similar state of things exist next season.

It may be well to observe, that the preceding statement of the crops is that of the United States, as a whole, and does not purport to give the crops of the States, though the shipments, stocks, etc., are necessarily arranged under the different leading shipping ports or States, as the case may be. It is well known that by the extension of railroads, and other means of transit, oftentimes large quantities of cotton grown in one State are received at, and shipped from, the scaports of another, and this, to a greater or less extent, is the case with every cotton-growing State in the Union.—N. Y. Shipping List.

1855.]

1,256,322 \$20,946,581

This is a sad financial exhibit for any company to make. The Canal was, however, projected and commenced long before railroads were strenuously urged in this country. The original idea was to construct a canal between the Chesapeake and the Ohio River, but the liberal funds contributed by stockholders, by the State of Maryland, and eventually by Congress, were exhausted long before the Canal reached Cumberland, and in order to complete the work to that point, Maryland and Virginia lent a helping hand and will never get their money back. The Canal presents the singular anomaly of an artificial feeder; such being at times the scarcity of water that the Company has contracted with a New-York engineer for the erection of "a pump, with a capacity to throw not less than 2000 cubic feet per minute, or double that quantity when forced by means of a blowing engine." The total tonnage transported on the Canal last year was 285,923 tons, at a fraction over half a cent per ton per mile. Eventually the Canal will be the means of transmission of large quantities of Cumberland coal to market. The Board estimate the coal tonnage of the present year at 500,000 tons.

The decline of bullion in the Bank of France has been £5,000,000 since the 12th of May, 1854. On that date the bullion amounted to £16,400,000, and in the return for the week ending 15th inst., it was £11,550,000.

BANK OF ENGLAND.—The Bank of England, on the 20th September, held a meeting, at which the Governor reported the net profits to the 30th of August last, amounted to £587,032 5s. 3d., making the amount of rest, £3,605,170 7s. 6d. After paying a dividend of £4 per cent, the rest would be £3,023,050 7s. 6. The directors, therefore, proposed a dividend of £4 per cent on interest and profits to the 31st of August, without deduction on account of income tax.

#### SKETCHES OF BANK HISTORY.

all of whom are dead. The charter required ten directors to be practical mechanics, and three more who had served an apprentice-ship to a mechanical business. The capital was \$600,000, in shares of \$25 each. James Dawes was the first Cashier. He died in 1815, and James L. Hawkins was chosen Cashier.

In 1815 the charter was extended to January, 1835. In 1821 it was extended to 1845, and an annual tax of twenty cents per hundred dollars imposed on the capital stock for school fund. In 1834 it was extended to 1857; the same year P. Moore died, and James Howard was elected President.

In 1835 the Bank was authorized to increase its capital to \$1,200,000; of the directors six were to be practical mechanics, and six who had served apprenticeships to a mechanical business.

In 1840 it was ascertained that the Cashier, James L. Hawkins, had committed large frauds on the Bank. He resigned, and A. P. Giles was chosen Cashier. In consequence of these frauds the Bank suspended specie payment on the 1st January, 1841.

A committee of stockholders examined the Bank and reported that its capital had been impaired, and an act of the Legislature was obtained immediately, reducing the capital to \$301,595, and the shares to \$12 50-100.

In 1843 the number of the directors was reduced to eight.

In 1845 James Howard resigned, and John J. Donaldson was elected President.

In 1847 the charter was extended to 1877, and January, 1848, dividends were resumed.

In 1853, the capital was increased to \$500,000.

By the new constitution of Maryland no banking charter can be granted or renewed but on the conditions that no officer or director shall borrow any money from the Bank, and that its stockholders shall be liable for its debts and liabilities to the amount of their respective shares.

A. P. GILES, Cashier.

In order to show the recent changes in the currency affairs of Maryland, we add an extract from the new

# Constitution of Maryland, adopted in 1815.

SEC. 45. The Legislature hereafter shall grant no charter for banking purposes, or renew any banking corporation now in existence, except upon the condition that the stockholders and directors shall be liable to the amount of their respective share or shares of stock in such banking institution for all its debts and liabilities upon note, bill, or otherwise; and upon the further condition that no director or other officer of said corporation shall borrow any money from said corporation, and if any director or other officer shall be convicted upon indictment of directly or indirectly violating this article, he shall be punished by fine or imprisonment at the discretion of the court.

#### SMALL BILLS.

# Laws of Maryland, Chapter 235, Sections 1 and 4, Passed May 21st, 1852.

SEC. 1. Be it enacted by the General Assembly of Maryland, That from and after the first day of October, eighteen hundred and fifty-two, it shall not be lawful for any person, firm, or association of persons, corporation, or body politic, to pay out, circulate, or receive in payment of any debt any bank-note, promissory note, or other obligation, payable to bearer, or indorsed in blank, or to bearer, or any other note, token, scrip, or device whatsoever, devised or intended for circulation as currency, issued without the limits of this State, of a less denomination than five dollars, under the penalty of five dollars for each and every offence, to be recovered by an action of debt, in the name of the State, before any justice of the peace of the State.

SEC. 4. And be it enacted, That from and after the first day of March, eighteen hundred and fifty-three, it shall not be lawful for any bank, savings institution, corporation, or body politic of this State, or for any person or association of persons to make, issue, or pay out any note or device, of the nature and character described in the preceding section of this act, of a less denomination than five dollars, under the penalty prescribed in said section for each offence, and to be recovered in the same manner.

<sup>\*</sup> The Bank paid this year eight per cent dividend, and the city and State taxes one and a half per cent additional.

# THE CULTIVATION OF COTTON IN ASIA.

FREQUENT attempts have been made by the English people, and at large expense, of late years, with a view to the extensive growth of cotton in India. The results thus far have been unsuccessful. We copy from a late work, entitled "The Three Presidencies of India," by John Capper, Esq., F.R.A.S., late editor of the Ceylon Examiner, an elaborate account of these labors.—[ED. B. M.

Few subjects have occupied so much of public attention of late years, have been so frequently discussed in books, in newspapers, and in parliamentary debates, as that of the production of cotton within the territories of the East-India Company. None will be disposed to question the great importance of the subject. Whether we regard cotton in its broadest aspect, as affording ample employment to vast numbers of persons in its growth, transport, and shipment; whether we look at it as furnishing food for gigantic manufacturing establishments in the parent country, scattering wealth and happiness in its path; or whether we view it as an article of social moment, ministering to the health and comfort of the entire human race; whether we consider it as a source of revenue, as a staple of trade and manufacture, or as a great help to civilization and progress, we cannot but feel that we have to deal with a most important subject.

India was unquestionably the birth-place of cotton cultivation and cotton manufacture. It is mentioned in the institutes of *Menu*, a work composed eight centuries before the Christian era, with many details relative to its manufacture and uses; and although not named in the *Riy Veda*, of still higher antiquity, there is no doubt that in more than one place the thread alluded to was composed of cotton.

Possessing, therefore so much antiquity, we need not feel astonished that, until the last half-century, the culture, trade, and manufacture of cotton in India should have occupied a most important position in the commercial annals of the world. That the production of cotton goods in India would still have stood forward preëminently as a branch of industry, had not the modern improvements of machinery in Europe snatched from it all its ancient prestige, there can be but little doubt; although, as regards the cultivation of the raw material, other causes have been at work to spread it elsewhere, to an extent unprecedented in the history of the world's industry.

It was a remarkable coïncidence that at the precise time when Arkwright and Watt were elaborating and perfecting their magnificent improvements of the spinning-machine and steam-engine, the British arms were subjecting vast empires in the East to our dominion, countries which possessed within themselves the germs of an almost boundless production; lands which from their suitability and fertile nature, might well be expected to furnish illimitable food for the new leviathans of steam and iron which they of Lancashire were creating.

The varieties of cotton known in the commercial world may be referred to three distinct species, each having several varieties. The Gossypium Barbadosæ is the species cultivated in the West-Indies, North-America, and in one or two parts of the peninsular of India.

Gossypium Peruvianum yields the cotton of Brazil, Pernambuco, Peru, etc. This has also been introduced into some districts of India. Gossypium Indicum is the species which, in a number of varieties,

produces the great bulk of the cotton of India and China.

There is a fourth species, the Gossypium arborum, or Tree cotton of India, unknown to commerce, though yielding a beautifully soft and silky fibre admirably adapted for padding cushions, pillows, etc.

The Indian species is that which now calls for our remarks. Of this there are many varieties, each possessing some distinguishing character of its own, arising from mode of treatment, soil, climate, etc.

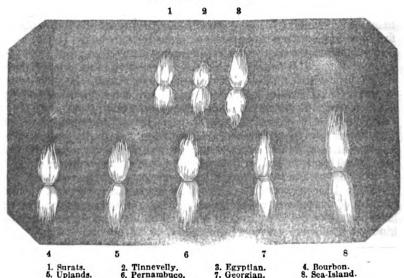

It usually attains a height of four to six feet, is bi-triennial, but may be equally cultivated as an annual, germinating and ripening its seed within a period of from four to eight months. The leaves are five-lobed; the flowers are usually found blossoming singly at the extremity of the branches; the petals being of a lively yellow color, with a small purple spot near the claw. The seeds are five in number, and are clothed with a firmly-adhering grayish down, beneath the short white wool of the capsule. (Royle's Indian Cotton, p. 140.)

The qualities by which the value of cottons are determined may be confined to three, namely, length of staple, strength of fibre, and cleanness of sample. Color, which was at one time thought much of, is no longer looked upon as a matter of moment. Inferior as the cotton of India is allowed to be, as regards its staple and purity, there is every reason to believe that in durability it at least equals the produce of any part of America; and of this fact the Hindoos are themselves

perfectly aware.

The accompanying illustration will convey to the reader a tolerably correct idea of the relative length of fibre of the leading qualities of cotton entering the markets of the world.

### COTTON-FIBRE.

In spite of its comparative inferiority, the Chinese have become large consumers of the cotton of India; and from taking a few hundred bales in the early part of the present century, they now consume as much as 50,000,000 lbs. annually. Some quantity is also exported into the neighboring countries on the north-west of India; and if we add to these outlets the home demand for the manufacture of a variety of dresses, furniture-trappings, etc. in daily use amongst all classes of the natives, it will be seen that the yearly production of cotton within the Indian territories must be on an enormous scale.

It has been stated by one allowed to be a competent authority on all matters connected with the natives of India,\* that the average consumption of cotton by the inhabitants of Hindostan amounts to not less than twenty pounds for each person. This will give a local annual consumption of 3,000,000,000 lbs.; and with the quantities taken by Great Britain and China, a total yearly crop of 3,110,000,000 lbs.

High as the average of twenty pounds for each individual may appear at first sight, it is not in reality a large quantity, when we remember that, except amongst the highest classes, cotton dresses form their only wardrobe; and that, in addition to this source of demand, they employ this staple in the manufacture of curtains, cushions, hangings, tents, ropes, carpets, lining for saddles, palanquins, etc., and for many other purposes utterly unknown to Europeans.

From the figures above given, it is evident that, so far as the mere growth of cotton is concerned, India does at this moment produce annually a quantity five times as great as is worked up by the united machinery of Great Britain; in order, therefore, to obtain her supply from India in place of America, England has but to induce the natives of the former country to cultivate one fifth more of the article, to obtain what she so much desires.

The anxiety manifested by the manufacturers, merchants, and political economists of England, that a large portion of our supply of this raw material should be derived from a country under our own government, in preference to seeing ourselves at the mercy of another nation for eight tenths of our requirements, is no new feeling. It has been dominant during the greater part of the last sixty years; and although, as regards actual results, in increased shipments to this country, there would appear to be little, if any thing achieved, it will be as well that we take a rapid survey of the measures adopted at different periods by the East-India Company for the furtherance of this object.

As early as the year 1788, the Court of Directors urged the Indian authorities to give every possible encouragement to the growth and improvement of Indian cotton, at the same time ordering a shipment of 500,000 lbs. to be made. Shortly afterwards, screws for the embalement of the article were erected, and a variety of imported seed was distributed throughout the peninsula. From this time until the beginning of the present century the shipments of Indian cotton to England fluctuated between 700,000 lbs. and 3300 lbs., the price of Surat kinds at Liverpool varying from 2s. 5d. to 8d. per lb.

In 1801, samples of the produce of Mauritius and Nankin seeds were received in England; and between that period and 1812 bounties were offered for improved samples, reports were received on the cotton resources of the various districts from the collectors, and quantities of West-Indian and American seeds were sent out and distributed through various cotton districts, with copies of instructions carefully compiled. The shipments of cotton to England during this period varied from 27,783,000 lbs. to 694,000 lbs., with prices ranging between 3s. and 8d.

In 1813 and 1814 the war with America broke out; and strange to say, that although our supplies from the United States entirely ceased while hostilities lasted, the receipts of cotton from British India only amounted in those two years to 5,200,000 lbs., or 2,600,000 lbs. per annum. It was at this time that the first American planter was dispatched to India, with the view of aiding in the improved culture and preparation of cotton, taking with him a number of New-Orleans saw-gins.

A further encouragement of the efforts of private parties in this important matter was the allowance of the drawback of the whole of the internal and sea duties on cotton exported to Great Britain. This took place in 1816; and the effect of this and other measures was evidenced in the increase of the shipments to England from ten million pounds' weight to forty millions in 1817, and eighty-six millions in the follow-

ng vear.

This increase was, however, not of a permanent character; for in the four following years the exports to Liverpool gradually declined to 6,742,000 lbs., prices in England having during that period declined

from the war figure of 1s. 6d. and 2s. to  $5\frac{1}{4}d$ . and  $8\frac{1}{2}d$ .

From this period, until the year 1840, the efforts of the government and of public bodies in India, as well as in this country, were confined to obtaining fresh supplies of seed from various parts of the world, endeavoring to improve the native mode of cleaning the cotton and the more questionable procedure of offering large bounties for certain quantities and qualities of the article grown in India. The shipments of the article to England had during all this time fluctuated to nearly as great a degree as in any previous times, the extremes being 75,746,000 bls. and 12,324,000 lbs.; the highest price realized by Surats in the Liverpool market for this period having been 1s. 4d. and the lowest 24d.

In 1840, Captain Bayles of the Madras army, having returned from a secret mission to the Southern States of America, brought with him ten planters skilled in the growth and preparation of cotton, a great quantity of the best cotton-seed, as well as a large assortment of agricultural and mechanical implements employed in the States. Experimental culture on a liberal scale was now commenced in the districts of Broach, within the Bombay presidency; in Coimbatore and Tinnevelly to the south of Madras; and in the Doab and Bundelcund, within the Bengal presidency. These were followed up by similar attempts at various other points within the three presidencies; the American planters were shifted from one locality to another, with a view of testing the comparative qualities of soil; in some instances model plantations were

established and worked under the immediate supervision of these planters; in others, efforts were made to induce the native growers to cultivate some of the American varieties, with the seed of which they were supplied. In all these efforts little expense was spared; yet in spite of the lavish and continued outlay, nothing appears to have been arrived at beyond the conviction that, with but one or two exceptions, much time, labor, and money had been expended without any encouraging results.

Baffled in their attempts at the introduction of new varieties of the plant, the experimenters bent their efforts in another direction, and endeavored to effect improvements in the culture and preparation of the indigenous species of the country. For several years, indeed up to a very recent period, this appears to have been the main object in view; the latest demonstration made by the Indian authorities has been the importation from England of two hundred cottage saw-gins, which were distributed equally through the three presidencies, and the offer made, through the Agricultural Society of India, of a premium of 500% for an improved cotton-dressing machine adapted to native use.

How far these continued efforts, which have, on the whole, been spread over a period of nearly seventy years, have been attended with success, may be judged from the facts, that in 1848 the shipments of Indian cotton to Great Britain amounted to 84,101,000 lbs., being 4,500,000 lbs. less than in 1844, 13,200,000 lbs. less than in 1841, and 2,400,000 lbs. below the exports of 1818.

Taking the average of a number of years, the export of Indian cotton to England shows a sensible increase since the pacification of Europe. Thus the average shipments to Liverpool from the Indian ports during the five years immediately following the peace were 44,000,000 lbs.; whilst in the five years ending 1848 they amounted to 69,000,000 lbs; in other words, they have averaged an increase of rather more than fifty per cent in thirty-three years. This augmentation, however, sinks into utter insignificance when compared with the progress of the cotton shipments from the United States to England during the same period, which was in round numbers, from 45,000,000 lbs. to 600,000,000 lbs., showing an increase of more than thirteen hundred per cent.

The argument that this increase of Indian cotton is highly satisfactory, seeing that it has taken place in the teeth of constantly falling prices in Europe, goes for very little, inasmuch as America has had the same disadvantage to contend against; for the relative vaules of the two articles remain much as they were thirty years since.

In the case of America the depression of the European markets has been met by improved and more economical methods of culture and preparation, the result of scientific skill and untiring energy. In India these elements have never been brought to bear beyond the model farms, for reasons which will be presently shewn. Other causes have, however, been at work, and enabled the export to be carried on in spite of the continually depressed markets. These have been a fall in the rate of freights from 14l. to 4l. 5s. and 2l. 15s. per ton, in other words from 2½d. to ¾d. and ¼d, per lb.; a decline in the exchange between

the two countries of quite 8d. in the rupee, equal to near  $2\frac{1}{4}d$ . per lb. on the cost of the cotton; the diminution of the cost of inland carriage and insurance, owing to the complete pacification of India; this item gives a saving of 8d. per ton per mile on the land-carriage from Berar to Mirzapore, and of  $3\frac{1}{2}d$ . per ton per mile on the water conveyance thence to Calcutta, equal together to nearly  $2\frac{1}{2}d$ . per pound on the entire journey; and lastly the change of route of Berar cotton, to Bombay in place of Calcutta, has effected a saving of  $\frac{1}{3}d$ . per lb.; making a total economy of about 7d, per lb. on the charges attaching to the bulk of the Indian cottons shipped to England, and which has thus enabled the article to be so exported in the face of lower prices.\*

By far the greater portion of the English supplies of Indian cotton are shipped from the port of Bombay, as may be seen by reference to the following figures:

From Bombay, . . . . . 55,201,231

" Calcutta, . . . . 1,293,982 | representing an average
" Madras, . . . . 3,973,074 | of 13 years ending 1846.
" Tinnevelly, . . . 1,110,084

Having thus seen that, at the end of labors spread over seventy years, after a large outlay of money and labor, after the importation of seed, tools, and superintendence, the quantity of Indian cotton obtained for England amounts to but one sixteenth in value of her total requirements; that in but few respects does the bulk of this excel in quality that which was exported fifty years since; and that the culture of the plant has been very partially extended or improved in the chief cotton-growing districts, scarcely at all in provinces to which that cultivation is less known, it behaves us to examine into the causes of this wholesale failure.

It must be borne in mind that the question of improvement of Indian cotton should be considered under three distinct heads; the introduction of better varieties, the amelioration of the quality and condition of the indigenous produce already grown, and the increased culture of the plant.

The opinions of the American planters who were engaged by the East-India Company appear to have been that the soils selected for trial of new seed were adverse to the chances of success. That this has been so in several instances, and with some show of reasoning, there can be little doubt; the black cotton soil has been, in not a few cases, supplanted by the red soil, especially of Southern India, where some success has attended the trials thus made. There does not seem, however, to have been much, if any, attention paid to the peculiarities of climate, the degree of moisture, the temperature, nor of these points taken in connection with varieties of soil.

It will require no argument to show that conditions affecting the vegetable economy of sugar, coffee, or rice, must be not altogether without their value in regard to the development of the cotton plant, whether in India or elsewhere. Yet it does not appear that this con-

<sup>\*</sup> Chapman's Cotton and Commerce of India, pp. 68 77.

sideration has entered into the calculations of the many practical men engaged in the long labors of the cotton experiments of India.

It cannot be, that as has been said, any portion of these failures is attributable to the supineness of the agency employed. If the bulk of the experimentalists have been in the employ of government, and therefore not so likely to have taken a lively interest in the matter, what is to be said of the want of success attending private enterprise? All appear to have shared in the common disappointment; and it is clear that we must look elsewhere for causes of failure.

Whilst climate and soil, separately or together, have been at work in retardment of new culture or the introduction of new varieties, there are antagonisms to be found in other quarters, affecting not only these, but the improvement of the indigenous cotton by culture, and by care in picking, equally with the increase in the amount of crop produced.

Foremost amongst these are undoubtedly the almost total absence of roads and canals through the heart of India; absence of interest in the experiment on the part of the ryots, owing to causes I shall presently notice; and lastly want of all security, for the investment of

European capital in the cotton-trade of the interior.

The first of these, although it might be supposed not to affect the produce of some of the cotton districts which are situated along the sea-board, has, nevertheless, a very material influence on the crops of these countries; but still more so in those more distant and extensive districts which furnish large quantities of exportable and locally consumed cotton. In the countries of Central India, not less than in those of the north and north-west, owing to the absence of all roads for vehicles, the ordinary means of conveyance is by pack-bullocks, who in vast droves track their slow and weary way across sandy, sterile tracts, through wild jungle-paths, and over steep ghauts, for hundreds of miles. To bring the cotton of Berar alone to Bombay, it is computed that the services of 180,000 head of cattle are required; \* and when we remember that their journey is for a great distance performed through districts in which both water and fodder are always scarce, it will not be surprising that the utmost uncertainty prevails as to the receipt of crops at the port of shipment. This primitive mode of conveyance is not only the most tedious, but the most costly of any in existence; yet by far the greater part of British India possesses no roads which will allow of the employment of carts.

It is in vain that British enterprise and capital are brought to bear upon the great experiment of cotton, so long as the universal cry for roads is disregarded. British merchants have been found with energy sufficient to brave the difficulties attending the establishment of agencies in the interior; but their ardor is damped, their efforts thwarted, and their capital jeopardized, by the one great crying evil, the utter absence of roads available for carriages. The old mode of transport is of necessity resorted to—that of pack-bullocks; and so slow and costly is this, that long before one crop of cotton be dispatched from

<sup>\*</sup> The Cotton and Commerce of India, p. 79.

the place of growth, the following harvest will have commenced; \* ships which have been provided in anticipation for the conveyance of this cotton to Europe are meanwhile waiting its arrival in the harbor of Bombay until the shipping season shall have passed; and the interest on the capital thus indefinitely locked up accumulates, until it forms a heavy and grievous item amongst the charges of the operation.

It is not, however, in the disregard to the want of proper means of conveying produce from one province to the other that the authorities evince their apathy, and from which the development of the cotton resources of India languishes. There are many other ways in which the industry of the country suffers; and, perhaps, in none other more surely and severely than in the surrendering of some of the finest and most promising districts, as regards cotton capabilities, into the

hands of young and inexperienced civilians.

Facts speak more plainly than theories or arguments; and the following, which bears upon one of the most hopeful tracts of Western India, is a case quite to the purpose, "The province of Candeish contains 12,078 square miles, of which it is estimated that the arable portion is 9772. Of this arable area, 1413 square miles are cultivated, and 8359 are lying waste. The population of the whole province was 785,991, according to a census taken in 1851. The number of villages in the whole province is 3837, of which 1079 are now uninhabited. The soil of Candeish is stated to be superior in quality to, and yields heavier crops than that of the Deccan and Southern Mahratta country. Although so much of the country now lies in waste, the traces of a former country are to be seen in the mango and tamarind trees, and the many ruined wells which are still to be met with in the neighborhood of almost every village. Of the five sixths of the arable land the five millions of square acres now lying waste, Captain Wingate remarks, nearly the whole is comparatively fertile, and suitable to the growth of exportable products, such as cotton, oil-seeds, etc." Here then is a vast tract of most promising country with but one sixth of its surface brought under cultivation, and having one third of its once thriving villages entirely deesrted! Can any thing speak more plainly than this does, of the neglectful state in which promising districts are left by the rulers of the country? It would be useless to inquire from what cause has arisen the desertion of those 1079 villages; although it is probable that the same indifference which looks calmly on, and provides no amelioration, had something to do with bringing about that melancholy state of things.

Of the immediate prospects held out to this district, which it must be remembered is equal in area to nearly half of Scotland, the reader may form some opinion from the quality of the functionaries placed in charge of it. At the end of July, 1850, the Bombay government placed the province in the hands of a young gentleman, no doubt of exceedingly good family, and possibly possessing a first-rate classical education, but who, having only entered the Honorable Company's ser-

<sup>\*</sup>India under a Bureaucracy, p. 105. † "Cotton Circular" of Messrs, Ritchie, Stuart & Co., Bombay, 1852.

vice in 1847, could not be expected to know any thing of the details of administration, or of the people and the country. This gentleman's assistant was still more juvenile in years and Indian experience, having had about fourteen months' acquaintance with the country. It is needless to speculate upon the amount of public mischief which the administrative experiments of these budding functionaries may bring about, or upon the number of ruined villages, or neglected fields, they may successively try their "prentice hands" upon.

With regard to the reputed indifference of the ryots to make any attempts at improved modes of culture, or the introduction of new varieties, some grave doubts may well arise. From all available data it would appear, that it is the opposition of the native capitalists, and not the cultivators, that has to be encountered. These men are opposed to change of every kind, dreading the possible loss of any portion of their influence and gains; they are particularly averse to the introduction of any new varieties of the plant, as likely to interfere with the indigenous kind, and which they pretend would bring down upon the country the "evil eye." So determined was the opposition of these bigoted men that in many places they employed people to go out at night and root up the young American seedlings from the experimental fields.

The ryots indeed entirely in the hands of this unscrupulous race of men, who alone profit by any improvement in their means, and who by a careful scrutiny of the proceedings of the former generally contrive to leave them at the end of crop-time as poor as they began.\* if there is any real indifference on the part of the poor cultivator to improvements, it is the result of the smallness of his wants, added to the utter hopelessness of any attempt at bettering his condition. There is,

<sup>\*&</sup>quot;The cotton is produced by the ryot. He is always in his banker's books as deep in proportion to his means as his European master, and can do nothing without aid. The brokers, or cotton-cleaners, or gin-house men, are the middle men between the chetty and the ryot. The chetties being moneyed men, make an advance to the broker. The broker is particular in classifying the seed-cotton, and pays for it according to cleanliness, and then he has much of the trash and rotten locks picked out, not to make the cotton better, but because the rubbish chokes the churks and prevents it from working. The good cotton is then separated from the seed, and the bad stuff which had been taken away from the good is beaten with a stone to loosen up the rotten fibre from the seed, and then it is passed through the churka. The good cotton and this bad stuff are both taken into a little room, six feet by six. which is entered by a low door, about eighteen inches by two feet, and a little hole as a ventilator is made through the outer wall. Two men then go in with a bundle of long smooth rods in each hand, and a cloth is tied over the mouth and nose; and one man places his back so as to stop this little door completely to prevent waste, and they both set to work to whip the cotton with their rods, to mix the good and bad together so thoroughly that a very tolerable article is turned out; even after all this bedevilling, if the people get a living price for it, they let it go as it is. But as is usually the case, they are shaved so close, that they are driven to resort to another means of realizing profit. They add a handful or two of seed to every bundle, and this is delivered to the chetties, and the chetties deliver it to their European agents, and the European merchants save their exchange, and their object is gained. The cotton is taken by the manufacturer at a low price, because he knows not what he is buying."—Letter from an American Planter to the Madras Government on Culture of Cotton in India. p. 37.

however, another and stronger cause at work than these; and that is, the want of a certain and sufficient price to compensate for any departure from old established practices. It has been shown that the proportion of cotton taken annually for export to Europe does not exceed one twenty-fourth part of the gross produce of the article; and that, for all local purposes, the fibre is as well adapted, or realizes as much, when dirty and discolored as when carefully prepared. As nearly all cultivation is carried on under loans from mahajuns, and other moneyed men, who purchase the crops at their own price, it follows that the ryot has little prospect indeed of releasing himself from the thraldom of these harpies, and coming in contact with buyers for the English markets.

To suppose that the agriculturists of India are incapable of being stimulated to any effort at improvement, to believe that they would not strive to better their condition if it were in their power to do so, is to consider them as differing from all other men in every part of the world. It is not found to be so with the Hindoo worker in cities; and unless it can be shown that a rural life has the power of subverting the natural feelings of mankind, this hollowest of all hollow pretenses must fall to the ground.

The want of roads which has so long operated against the introduction of European agency and capital into the interior, is scarcely of such serious moment as the insecurity attaching to all advances made by the English dealers. It has been the profession of the government to desire that British merchants should open up the country by the establishment of agencies for the purchase of cotton in various districts; yet when the uncertainties and procrastination of the local courts of justice were pointed out, and a request made that private capitalists should be allowed to avail themselves of the summary and only effectual process for recovery of advances which was pursued by the government collectors under similar circumstances, the authorities consistently with the red-tapism which pervades the whole system, declined to accede to so reasonable a request.\* Nevertheless we are told that the government is most anxious to aid in developing the resources of India!

Looking at all the facts that have been thrown together in this chapter, and summing them up, we find the great cotton question to stand thus. British-India, although admitted to be capable of supplying England with the whole of her cotton, furnishes but one eighth of her imports of that article, the shipments of India cotton to this country in 1847 and 1848 being actually less than they had been at four previous dates; while those of 1845 and 1846 were considerably below the exports of the five previous years. The quality of that article with a few solitary exceptions, varies in no respect from that of fifty years since. English capital and skill have been in vain introduced into the interior, where government, whilst professing a desire to assist, has in reality refused all aid. The Honorable Company have, during a period of about seventy years, introduced a dozen American planters,

<sup>\*</sup> India under a Bureaucracy, p. 108.

a score of ploughs, a few hundred bushels of seed, opened a model-farm or two, offered some paltry premiums, and lately dispatched two hundred cotton-gins for distribution amongst two millions of cultivators; and when all these gigantic efforts, paraded through whole hecatombs of dispatches, that would supply ample fuel for a hundred suttees, when these have all failed, the red-tapists protest that all has been done that can be done! It does not appear to have occurred to the rulers of India, that the same means which have so completely changed the aspect and destiny of other countries might not have been without influence in this tax-devoured land; that what saw-gins, and ploughs, and model-farms failed to achieve, might peradventure have been accomplished by purifying the courts of law and making a few roads.

The utter neglect of this branch of public works, despite the reports and complaints on the subject from all parts of the vast continent of India, needs a separate chapter, where it will be seen that information upon this vital necessity of the state has long been furnished to the hands of those whose duty it should have been to have apportioned some honest fraction of the millions wrung from the industry of the people to the satisfying their wants. The remedy was within their grasp; but they preferred the quackery of theoretical experiments, the parade of official dispatches, the mockery and mystification of parlimentary blue books. One brief emphatic order, meant for obedience which said, "Let there be roads!" would have changed the face of the country, ameliorated the condition of the people, and made the cotton trade of India with Europe a splendid fact, instead of, as at present, a disgraceful failure.

### COINS, COINAGE, AND BULLION.

### TRIAL OF THE GOLD AND SILVER COINAGE.

On Thursday, the 7th of December, the ceremony known as "The Trial of the Pyx" was performed at the Exchequer-office, Whitehall-yard. Four years have elapsed since the last previous trial was made, and it was noticed, as a very singular fact, that the proceedings have very rarely been chronicled, and that, consequently, the public have been left in a state of ignorance of a matter in which they are intimately concerned—namely, the purity and proper value of the current coin of the realm.

The Lord-Chancellor arrived at half-past nine o'clock, at which time four privy-councillors were summoned to meet him. The learned Lord was alone until a quarter to ten, when the Chancellor of the Exchequer and Sir E. Ryan arrived. The necessary number was not, however, complete, and although Mr. Cardwell entered shortly afterwards, a considerable delay ensued. A messenger was dispatched to the

Court of Exchequer, and, at a few minutes past ten o'clock the Chief-Baron arrived in his full judicial robes.

The Lord-Chancellor, who was accompanied by the Deputy Sergeant-at-Arms, the Mace-Bearer and the Purse-Bearer, then took his seat, and the court was opened, there being present—Sir John Herschell, the Master of the Mint; the Chief Assayer, the Superintendent, the Melter, the Coiner and other principal officers of the Mint; Mr. George Smith Hayter, the Prime Warden, and other officers of the

Goldsmith's Company, the Queen's Remembrancer, etc.

On the table, before the Lord Chancellor, were "the pyx," or boxes containing samples of "the gold moneys coined by Sir John Frederick William Herschell, K.H., Master and Worker of Her Majesty's Mint, and delivered into the office of receipt of the said Mint from the 16th day of December, 1850, to the 30th day of June, 1854 the said moneys being coined after the rate of 46 29:40 sovereigns to the pound weight Troy, of the standard of 22 carats of fine gold, and 2 carats of alloy, pursuant to act of Parliament the 56th of George III., chapter 68, sec. 11, and the Mint indenture bearing date the 6th of February, 1817." The amount of the gold moneys represented was £28,838,534 16s. 10d. The pyx also contained samples of the "silver moneys coined by Sir John Frederick William Herschell, K.H., Master and Worker of Her Majesty's Mint, and delivered into the office of receipt of the said Mint from the 16th day of December, 1850, to the 30th June, 1854—the said moneys being coined after the rate of 66 shillings to the pound weight Troy, of the standard of 11oz. 2dwt. of fine silver and 18dwt. of alloy, pursuant to the act of Parliament the 56th of George III., cap. 68, sec. 11, and the Mint indenture bearing date the 6th of February, 1817." The amount of the silver moneys represented was £1,030,005 1s. 3d. These returns were duly certified by Sir John Herschell, and by Mr. W. H. Barton, the Deputy-Master and Controller of the Mint. There was also a large bar of standard gold, by comparison with which the new coinage has to be tested.

The Queen's Remembrancer administered the oath to the following gentlemen, (all goldsmiths and silversmiths,) who composed the jury: Mr. James Garrard, of Pinner; Mr. James Henderson Watherston, of Henrietta street, Covent Garden; Mr. Henry John Lias, of Myddleton square; Mr. John Gray, of Billiter square; Mr. Richard Fownes Wingrove, of Wood street; Mr. Henry Sykes Thornton, of Birchin lane; Mr. George Grenfell Glyn, of Lombard street; Mr. William Summers, of Great Marlborough street; Mr. George Matthews, of Hatton garden; Mr. Jeremiah Fuller and Mr. Josiah Sharp, of the Assay Office, Goldsmith's Hall; and Mr. Henry John Lias,

Jr., of Myddleton square.

### THE MINT AND THE COINAGE.

The annual account of the moneys coined at the Mint during the past year, 1854, has been laid before the House of Commons. It states the total value of the gold coinage to have been £4,152,183,

including 921,890.478 oz. weight, and 3,589,611 pieces, of sovereigns, and 144,480 840 oz. weight, and 1,125,144 pieces, of half-sovereigns, the value of which latter was, of course, one half, or £562,572. No "double-sovereigns" were coined. The total value of the silver coinage amounted to £140,480, including 550,413 florin-pieces of 200,150.200 oz. in weight, and £55,041 in value; 552,414 shillingpieces, of 100,439.000 oz. weight, and £27,620 in value; 840,116 sixpenny-pieces. of 76,374 200 oz. weight, and £21,002 in value; 1,096,613 groats, of 66,461.450 oz. in weight, and £18,276 in value; 4158 four-penny-pieces, of 252 000 oz, in weight, and £69 6s. in value; 1,471,734 three-penny-pieces, of 66,897 000 ox. in weight, and £18,396 in value; 4752 two-penny-pieces, of 144 000 oz. in weight, and £39 12s. in value; and 7920 silver penny-pieces, of 120 000 oz. in weight, and £33 in value. The total value of the copper coinage was £61,538, including 6,827,520 pennies, of 127 tons in weight, and £28,448 in value; 12,461,568 half-pennies of 115 tons in weight, and £25,961 in value; 6,504,960 farthings, of 30 tons in weight, and £6776 in value; and 677,376 half-farthings, of 1 ton 11 cwt. 2 qrs. in weight, and £352 16s. in value. It is worthy of mention that no crowns or halfcrowns were coined in 1854. The gross total value of the gold, silver, and copper coinage of 1854, amounted to £4,354,201.

NUMISMATIC SOCIETY, LONDON. - Lord Londesborough as President of the Numismatic Society, received the members of this Society at his mansion in Carlton-House terrace; to meet whom his Lordship invited several distinguished Fellows of the Royal Society and the Society of Antiquaries, and Members of the Royal The visitors exceeded 300 in number, for whom Lord Londesborough had provided a rich entertainment in his own recherché museum, to which were added many valuable contributions. One of the most novel and striking was a selection from the Anglo-Saxon remains very recently discovered by Mr. G. Hillier, in the Isle of Wight. They consist of silver-gilt fibule, and other ornaments of the female costume; two crystal balls in silver settings, with loops; and a silvergilt spoon, also found in the graves of women; swords, spears, knives, arrow-heads, and umboes of small circular bucklers. The interest of these discoveries is second only to that of the Faussett collection of Saxon antiquities; of the latter, proof engravings were exhibited. Some Roman vessels in glass afforded rare examples of the perfection to which glass-making had been brought by the Romans. Most of them were brought from the Rhine by Mr. W. Chaffers; but a splendid basin, with ribs on the external surface, technically termed "pillar moulding," exhibited by Mr. Joseph Clarke, was found at Takely, in Essex, in a sepulchral deposit. Among the numismatic attractions, Mr. Bergne's fine Roman large brass coins, a series from Julius to Posthumus, and all in the best preservation, took the first place. There was also exhibited a series of coins of the Roman Emperors in large brass, as well as a remarkable collection of patterns for the English coinage of the age of Charles I. and the Commonwealth. Among the Mediaval works of art was an enriched ivory chapelle, or shrine, from Germany, containing figures of the Virgin and Child; and series of sculptures of the legendary history. There was also a rare display of gorgeous jewelry, and table ornaments and utensils, of the sixteenth and seventeenth centuries. Mr. Morris Moore's newly-discovered painting by Raphael (the subject the contest between Apollo and Marsyas) excited much attention. The original sketch is said to be preserved in Italy. Altogether, the rare character of the articles exhibited, and their illustration of the art of remote periods, rendered this conversazione one of the most interesting réunions of the season.

### CURRENCY IN SOUTH-CAROLINA.

From the Charleston Courier, October, 1855.

The first recourse to or adoption of paper currency, in any form, in Carolina, was by the eleventh clause of an act of May 8th, 1703, 2d S. L. 210. This act was designed to maintain the credit of the province under the heavy expenditures incurred in the expedition of the preceding year against St. Augustine, and after devising and detailing a mode of raising by assessment the sum of £4000, proceeds in the clause referred to as follows:

"And whereas the said tax of £4000 herein mentioned, is raised to defray and satisfy such persons from whom any goods, provisions, ammunition, or vessels of war, were taken up for the late expedition against St. Augustine, and to satisfy the debts now owing by the public, which could not be done presently without pressing too hard upon the inhabitants of this colony, and that it would also be hard upon the persons who had trusted the country, to be so long without a due payment of their debts. For remedy thereof, and following the example of many great and rich countries, who have helped themselves in their exigencies with funds of credit which have fully answered the ends of money, and given the people besides a quick circulation of their trade, and cash. Be it enacted by the authority aforesaid, that it shall and may be lawful for the public receiver, together with the assistance of Col. James Moore, Alexander Parris, Esq., and James Serurier, alias Smith, commissioners thereunto appointed to make or cause to be made a certain number of bills of credit, the lowest beginning at 50 shillings and the highest not above £20, amounting in all to the sum of £20,000."

By other provisions of the act, the bills were to be paid at par, the counterfeiting of them was declared felony without clergy, the indented counterparts were to be kept by the public receiver in a book for convenient inspection by all parties suspecting counterfeits, interest at 12 per cent, was allowed, the bills made a legal tender under double forfeiture for refusal.

Several acts were passed in quick succession to carry out this measure and keep up the currency thus instituted against the depreciating causes which assailed it.

An act of April 9th, 1706, declared that the bills of credit then outstanding, and commonly called "country bills," should continue "at the full and certain price and value" then fixed.

An act of July 5th, 1707, provides for a final cancellation and recall of the first batch of bills by a new issue to the amount of £8000, in denominations of £1, £2, £4, £6, £10, and £20, which were to be a legal tender for all debts under 40 shillings.

An act of 14th of February, 1707-8, provides for an issue of £3000 "to be struck or stampt" in bills of £1, for a special war purpose; an act of April 24th, 1708, for £5000 in 20s. and 40s., and repeals the preceding act. On the 1st of March, 1710, provision is made for

an issue of £3000, in 5s. and 10s. bills, one third to be applied to the redemption of outstanding issues. In 1712, there was passed an act, not now to be found, for "raising the sum of £52,000, by stamping and establishing new bills of credit, and putting the same out at interest, in order to call in and sink the former bills of credit, and thereby give a further credit to trade and commerce," the first act in our records that approximates a Bank act, and which gave adoption to the term bank bills. The scale of depreciation from this date assumes a sliding character, as will be seen by the several acts, a brief survey of which is given in the introduction to Brevard's Digest.

The first issue of 1703 retained for some short while its designed value as a representative of Sterling. The first great depreciation ook place about 1708, in consequence of a Spanish and Indian war. The relative value of the currency or country bills against sterling soon adjusted itself at 7 to 1, and for many years no great and permanent variation

took place

Proclamation money, a term of frequent occurrence in our earlier history, and yet retained in law and processes, is traced to a proclamation of Queen Anne in 1708, designed to furnish a common measure of reference and comparison for the different paper currencies and provisional issues of the colonies. It estimated and fixed £100 sterling at £133 6s. 8s. currency, or  $1\frac{1}{8}$  to 1 on currency against sterling.

Referring the curious to the account above quoted, we have introduced those particulars in order to afford a clearer understanding of an essay, which is subjoined. We annex it as a cotemporary comment, of a date which marks an eventful and important transition in our history, and it will be interesting to many, as the earliest extant essay of a practically suggestive nature, on the vexed and vexing question of our currency, a source often of much embarrasment to the juvenile arithmetician in his "Exchange," and to the lawyer in his appreciation of old money acts.

### From the S. C. Gazette, March 24th, 1732-'3.

"Mr. Whitmarsh: Sir: I think it is now about 30 years since paper currency made its (first) appearance in the British America; scarce any thing has afforded more occasion for speculation. It would therefore seem too assuming for any single person at this time of the day either to say that all schemes on which paper has been issued have been defective, or that paper can't be put on and kept under such a an regulation to answer the end aimed at, namely a medium of trade with mutual advantage to all concerned. But to proceed:

"It's evident that few, if any countries, are capable of carrying on trade entirely in a way of barter. Such as can't must have a medium of exchange to ascertain or determine property between man and man

in commerce.

"Silver and gold having obtained an intrinsic value only from the common consent of all nations, is certainly preferable to any thing yet known for this end. But as some places can't keep silver or gold enough for the use aforesaid, nor do it by barter, such are under an unhappy necessity of substituting something in lieu thereof void of such an intrinsic value.

"Paper currency has hitherto been employed in this and several neighboring provinces; and although it's granted that trade has been augmented considerably by it, yet it must be owned that many real evils have accrued to some private persons, whose circumstances have been in a situation different from the generality of the community, it's necessary to endeavor for the future to prevent such grounds of just complaint. Whether it's possible to effect it, I shan't, till further experiments are made, pretend to determine.

"We all know the evils complained of has arisen chiefly from the bills mutation in value, which I may venture to say has been always decreasing, not only in this Province, but everywhere else; to prevent which and keep the bill always or very nearly to it's original, many schemes has been proposed; such as I have seen carry marks of

defect, I mean such as have not been yet put in practice.

"That of Mr. II—n is not proof against the objection of Mr. Y—e, and it's with all imaginable deference to Mr. Y—e's superior judgment, I would take the liberty to say, his own is far from being perfect, since he purposes to ascertain and keep up the value of the Paper Bill by a standard which is in itself mutable, namely, Rice.

"Nor is the reasons he mentions, namely, our being debarred forcign trade, etc., that which prevents our having among us silver, etc., since it's evident some British plantations with a foreign trade have only paper currency, while others entirely debarred such trade have gold and silver only; (nor is it difficult to assign the reason therefor,

but at present it's needless.)

"Another (in a Northern colony) has attempted to introduce silver and gold so that in the course of nine years to pay off and cancel all the paper currency; it would be too tedious to give a perfect view of his scheme, but I think it practicable, and would certainly effect what he proposes; nevertheless it would be of no real advantage, because the difficult part he has not accounted for, namely, keeping it there for constant currency.

"He proposes indeed to pass a law to prevent exporting it, but if (as is plain) the balance of trade with Great Britain is against 'em, such exportation can no more be prevented than in Spain or Portugal. So that although I should grant it easy to do the same thing here, I can by no means allow it could be kept among us in our present circumstances; nor can it ever be done as it were by force, and (as it were) against the laws of nature. "Tis that only will help us to it, if ever

we should be so fortunate as to see it.

"Taking it for granted that a medium of exchange is absolutely necessary to carry on trade, and support government, and that paper is the best shift we can make, no objection of consequence lying against it, but the value being subject to depreciate, I would humbly propose a standing paper currency to continue till we should find the nature of our trade would afford us silver or gold; since I can't find that either we or our neighbors are wiser or better for issuing bills on loan or otherwise, to be cancelled in seven or ten years. Whilst circumstances continue the same, there must ever subsist the same reason for

making more as when we first begun; only with this difference, much clamor and some expense accompanies the periods.

"And that the paper bill may better preserve and constantly retain its original value or very near the same, I propose the standard of, or test shall be that which is certain, namely, silver and gold.

"That the sum of £50,000 be printed, the tenor of the bill expressing silver, according to the proclamation value, to be issued on loan with proper security at the rate of —; interest to be paid in silver and gold, but in discharge of principal, the bill to be taken.

"That £21,000 of the new bills be first applied for paying off the bills now extant, at the rate of 1 for 5. That the interest received of the remaining £29,000 be annually reissued on interest till the principal amount to £50,000. After which time the whole interest should be applied to the support of government, and the silver and gold paid out of the treasury accordingly."

The names intended by the designations above introduced, we take to be John Hammerton, Provincial Secretary, and Col. Francis Yonge. In the next number, the writer continues, and notices some objections. Having given the substance of the scheme, we condense his remarks. The principal objection noticed is, that "the loan proposed would not be taken, on account of the difficulty of obtaining gold and silver to answer the interest;" on which the proposer remarks:

"First. Silver and gold being current at a certain price, would induce merchants of New-York, and other places, to send it instead of sterling bills. More silver and gold have been imported for several years past, than would answer the interest on £29,000.

"Secondly. Vessels coming late in the summer from the Sugar Islands, or early in the winter, would find silver and gold the best returns, as had been the case.

"Thirdly. Our market for European and most other imported goods is so low, that very little, sometimes no profit, accrues to the factor. I say a factor, because the difference is considerable between him and the person who imports on his own account.

"Fourthly. Supposing the interest to continue at 10 per cent, only one tenth of the whole currency is required in gold and silver. If silver should stand at 5 per cent, above the paper bill, it would be introduced and retained."

A general objection against paper currency, that it would "affect exchange and raise the price of staples," is briefly noticed, with the assertion that goods increase or decrease in value from causes independent of the medium of trade, and that the plenty or scarcity of money, the original value being preserved, could not affect staples unless under extraordinary occasions, wars, etc.

The third number is devoted more particularly to a discussion of the laws and conditions affecting produce prices.

After mentioning amount of crop and scarcity of shipping as two common causes of low prices, and the opposite conditions of short crops and low freights, as having the contrary effect, the correspondent proceeds:

"But what I've observed constantly to affect prices is chartered

ships, or orders to several factors at the same time for a certain com-

modity without limiting a price, etc.

"If any one thinks this is not a rational account, but that the paper currency does the mischief, I desire they would give better reasons, and show how it has raised pitch from 35s. to 50s. in four weeks, and reduced it again to 40s. in ten days; how it was that rice, at the beginning of the crop at 45s. fell to 40s. and advanced to 47s. in six weeks when silver did not alter 1s. per ounce, or exchange vary 5 per cent, or why did not the additional currency of £50,000 merchants' notes afford some proof of this objection: that year it was remarkably the

contrary, for sterling bills were never plentier."

"But, says another, let the planters have money on their lands to pay their debts; they will keep their rice, etc., at home till the mer-

chant is forced to give the price, they please to demand.

"Will they, so? (Well, when the sky falls they'll catch larks.) Where is the man with two grains of sense, being in debt, that will keep his goods at home at an expense of 10 per cent, and at so much uncertainty that he may lose 20 per cent. Again it must be a general contrivance and all agree to it, or it won't do. And granting it should be so, won't the objector allow it is as easy and full as likely that the merchants in Charleston would also combine to counterplot them by engaging not to give more than a certain price for produce; and it may be also, that they would not sell goods but at a certain advance; persons living compact, as in Charleston, may sooner unite to the prejudice of the planter than all could join in such a contrivance throughout the country."

The conclusion of the third and last number is as follows:

"Putting all things together, I would humbly submit, whether the circumstances of this province can well afford, continuing the interest at 10 per cent, perhaps it may be necessary to do it, until such time as the public debt, £105,000 old bills be paid off, which would be effected according to my scheme in six years or less; at which time if not before I doubt not, all will agree to reduce interest, unless in the mean time we should be so fortunate as to find some new staple or manufacture, to give new life to the planter and others in trade."

This scheme and essay, so redolent of "the old times" when Adam

Smith as yet was not, and when the great fear of a Carolina planter

was a Rice glut, suggests many reflections.

SAVINGS BANKS.—An application was made to the Supreme Court, before Judge Roosevelt, by the United States Trust Company, for directions relative to a second dividend to the depositors of the Knickerbocker Savings Bank, the question being whether to divide immediately the amount on hand, or to await the realization of some other assets, not at present available. Judge Roosevelt decided in favor of the former course. The amount at present on hand is sufficient for a dividend of fifty per cent, making, with the amount previously paid, eighty-three and one third cents on the dollar. It is estimated that the remaining assets will be sufficient to make a further dividend of five per cent.

# LIABILITIES AND RESOURCES OF THE BANKS OF THE CITY OF NEW-YORK,

According to their Quarterly Returns.—September 29, 1855.

### Notes on the Money Market.

NEW-YORK, OCTOBER 26, 1855.

Exchange on London, at Sixty Days' Sight, 8% a 9 Premium.

The foreign exchanges are in a favorable condition, and indicate at this moment no advance in the rates for the current week. We quote for bankers' bills, at sixty days, as follows: London 9% a 9; Paris, 5.17% a 5.16%; Antwerp, 515%; Amsterdam, 41% a 41%; Hamburgh, 36% a 36%; Bremen, 75% a 79; Frankfort, 41% a 41%; Berlin 72% a 73; Leipsic, 72% a 73%; Cologne, 72% a 73.

There are now regular drawers on Cologne, Leipsic, Berlin, etc., which have not been hitherto quoted by us.

For the Cunard steamer of the 24th, about \$750,000 were shipped, mostly in coin, for New-York account. Such remittances must be made only on specific orders, as the rates for prime bills do not warrant the cost of shipments hence to Hayre or Liverpool.

Some of our daily journals speak with great indifference of a possible suspension of specie payments by the Bank of England and Bank of France, as if no more serious consequences were to be feared from such a financial revulsion, than by the failure of some of our small banks, with no more than \$50,000 of specie. The failure of those two institutions, or either one of them, if they should be compelled to suspend, would shake the financial world in its remotest parts, and the United States would be no exception. Besides the millions of foreign capital permanently invested in this country, there are large sums of floating foreign capital, now liable to be withdrawn at any time when money is of more value in Europe than here, to say nothing of the heavy capital invested in our stocks and bonds, which of course could not be realized readly if sent here; but which must depreciate in value abroad.

Such a crisis is not so near yet as believed or feared by so many. The resources of the Bank of England are very large, and we do not think that confidence in the institution has yet received a severe check. As for the Bank of France, being more or less dependent on the speculation on the Paris Bourse, such a catastrophe might occur sooner, but with the assistance of the Société de Crèdit Mobilier, and similar wealthy corporations, it will likely pass over the present dilemma without any severe difficulty. The late quotations of France bank stocks do not evidence any fear of a suspension soon. The stock of the Bank of France is quoted still at one hundred and fifty per cent advance.

In fact, the effect shown at Paris and London, subsequent to the heavy negotiations for gold, is no greater than in Wall street. We think it will be found upon close scrutiny, that our market here is quite as sensitive, with all prevailing commercial advantages, as that of London or Paris.

Money is not abundant on call at 7 per cent. There are limited transactions at this rate, but the quotations outside the banks are 8 a 10, and in a large number of cases 10 a 12.

For the first time the London Times begins to talk of "national bankruptcy" for old England. This is certainly strong language for such a journal to use, and it certainly must create an alarm among all lovers of national faith and sound currency, that even "a suspension of payments" by the Bank of England should be suggested in leading quarters. This, however, is looked upon only as a remote contingency, and need not alarm capitalists at present in Europe. But we cannot hide the fact that for the last ten years British and Continental capital has sought, largely, investments in this country, and that the events of the past two years have urged further transmission of capital thence to the United States. The daily papers give at length, the copious remarks of the London Times on the financial prospects of Great Britain. From those our readers can draw their own conclusions.

The fiscal quarterly returns of the revenue of Great Britain to 37th ult. show an increase of

revenue for the year of £8,344,000, as compared with the previous year. The increase or decrease

| Increase.                   | Decrease.            |
|-----------------------------|----------------------|
| Customs revenue, £1,290,787 | Taxes, £238,737      |
| Excise,                     | Post-office, 206,819 |
| Stamps,                     | Crown lands,         |
| Property tax, 6,484,147     | Miscellaneous, 4,791 |
|                             |                      |
| £8,841,184                  | £496,403             |

The leading change of the month is that the Bank of England had advanced the rate of interest on the 4th instant from 5 to 5½ per cent. This measure was intended, in part, to counteract the movement of the Bank of France. The latter had been in the market for gold, and it was understood had taken out about three millions in specie. Money was, however, abundant in London. The brokers had advanced the rates on loans at call to 4½ per cent. Consols were steady at 87 ¼ a 87½. We refer to another column for copious details as to the condition and prospects of the Continental markets. At present this subject is full of interest to our commercial readers, and we omit other important matters in order to give place to the summary of the grain, cotton, and other markets.

The closing prices of consols for the four weeks had been:

| September 15, 90  | 4          | September 22, | 89 % |
|-------------------|------------|---------------|------|
| September 29, 88. | <b>%</b> ( | October 6,    | 874  |

and on the 19th instant consols closed in the London money market at \$7½ at \$7½. It is now just eight years, (October 25, 1847.) since the Bank of England felt the necessity of advancing the rate of interest to eight per cent, while England was in a state of peace. During the same month consols fluctuated between 79½ and 85½, and the coin in the Bank was at a low point. Now we find that with an expensive war on her hands, she can maintain consols at \$7½, and the rate of interest is only 50½ per cent instead of \$--a marked contrast, and one that demonstrates that a failure of the harvest is more disastrous, financially, than war.

State loans partake less than others of the depression now observable in stocks. It will be seen that nearly all are quoted at a discount, namely:

| Sept. 7.                          | Sept. 14.   | Sept. 21.   | Sept. 28. | Oct. 5. | Oct. 12. | Oct. 26.        |
|-----------------------------------|-------------|-------------|-----------|---------|----------|-----------------|
| U. S. Six per Cents, 1867-8,      | 117%        | 117%        | 118       | 117X    | 117      | 11734           |
| Ohio Six per Cents, 75,           | 114         | 114         | 114       | 114     | 115      | 118             |

| Pennsylvania Five per Cents, 871/ | 86 <b>%</b> | 85%         | 8514      | 85      | 851/2    | 83              |
| Virginia Six per Cents, 9514      | 9414        | 95%         | 97%       | 97      | 9614     | 95 <sub>%</sub> |
| Georgia Six per Cents, 99         | 99          | 99          | 99        | 99      | 961      | 99              |
| California Seven '70, 89          | 8715        | 87          | 871       | 86      | 84       | 85              |
| North-Carolina Six per Cents, 99  | 50 ₹        | 99          | 99        | 99      | 95%      | 98 <sub>M</sub> |
| Missouri Six per Cents,           | 92%         | 9214        | 91 🗶      | 91      | 87       | 87              |
| Louisiana Six per Cents, 98       | 93          | 93          | 92        | 92      | 90       | 86              |

The changes in these securities are very slight, and there is no press of them upon the market. Missouri Six per Cents have been somewhat depressed during the week, and on one day sold as low as Ss. The State is now issuing new bonds in behalf of the Pacific Railroad and other companies of that State, and these in turn are made over to the contractors in part payment for construction. If the whole issue were placed in the hands of well-known capitalists here, in behalf of the State, a better price would be realized. There is no ground for the current contrast between Missouri and North-Carolina Six per Cents, namely: 90 for the former and 98 for the latter.

The finances of Missouri are decidedly upon a better footing than those of North-Carolina; whether we regard the bulk of the debt or the present and prospective revenues and expenditures of the two States. It is known that Missouri has been at all times backward in the creation of a funded debt and up to this moment very cautious in its aid to railroad corporations. The move in this direction, although at a late day, will have an immediate and also a permanent effect in the development of the mineral, agricultural, and manufacturing resources of the State.

In railroad shares the operations have been very large and again at a decline. Reading Railroad

shares are  $\sin y$  er cent lower than at our last month's report, notwithstanding the promise of a liberal dividend early in 1856.

In railroad shares the market is weak. This is a species of scentities which is readily affected by the scarcity of money, and also by the caprices of the movements among operators. Every serious railroad accident promptly and unfavorably affects the current value of nearly all railroad stocks; because confidence is lessened in their management. Recent events would serve to show that ahareholders are liable to severe depreciation in such property, not only by accident, but by the dishonesty of their employees. It is needless to conceal the fact that this liability to extraordinary losses tends to depress the value of railroad shares; and to disincline operators to invest permanently in them. There are some few roads that are so well managed, and whose business is so large and lucrative, that their shares undergo but little change. Among these we may with confidence refer to the Western Railroad, (Mass.,) the New-York Central Railroad, the Reading Railroad, the Boston & Providence Railroad.

A change has been effected in the management of the Baltimore & Ohio Railroad Company, by which the present President, W. G. Harrison, Esq., will be superseded by Mr. Chancey Brooks. There are no sales reported recently in Providence & Stonington, or in Norwich & Worcester Bailroad shares. The western roads (Michigan) have lost favor, although it is known that they are doing a large business. In Cleveland and Toledo, shares though decline is over six per cent. Illinois Central, 1-y.

By the last steamer from Liverpool we learn that the ship Crimea has sailed from Cardiff for Galveston, (Texas.) with another cargo of iron for the "Galveston, Houston & Henderson Railroad Company" of that State. This will enable the Company to complete such a portion of the road by the 1st of February next as is required by the charter.

Railroad bonds are lower, but the fall is not so great as in shares. The bonds are held more for investment.

There being no foreign orders in the market, the transactions in railroad bonds are very limited, so far as relating to each sales, while lar resales on time were made in Illinois, Central, Michigan Central, and Erie's of 75 and 83. Illinois Central shares are the leading bonds of the past few weeks. We continue our quotations for the past six weeks:

| Bonds, etc.                      | S pt. 7. | Sept. 14. | Sept. 21. | Sept. 28. | Oct. 5.     | Oct. 12. | Oct. 26. |

| Nicaragua Transit,               | . 19%    | 19 🗶      | 19%       | 19%       | 18%         | 18%      | 16%      |
| Pennsylvania Coal Co.,           | .10314   | 102 %     | 102%      | 100%      | 99×         | 100%     | 98       |
| Oumberland Coal Co.,             | . 27%    | 2716      | 261/4     | 25%       | 26%         | 2614     | 25⅓      |
| Del. & Hudson Canal Co.,         | 132      | 129%      | 131       | 125       | 126         | 125      | 121      |

At these quotations the Erie bonds pay over eight per cent. Illinois Central over nine. New-York Central nearly seven. Pennsylvania Coal Co. stock is known to pay ten per cent dividends

annually, and their business greater than ever. The rates are very tempting to capitalists in all the bonds above enumerated. No safer income need be coveted than that arising from the railroad bonds named by us.

The decline in Delaware & Hudson Canal shares is singular, when we consider the value of the stock and the large business done by the Company. But we think that Reading shares will hereafter approach the D & H. in market values.

As to railroad boads it is conceiled that they have a more steady value in the market. Whatever doubts may exist as to the paying qualities and remunerative business of our leading railroads, no question is started as to their abundant means to liquidate their funded indebtedness.

Even with this reliability as to the safety of these bonds, their market values are changing constantly with the phases of the money market. The sales of Illinois Central bonds have been very large during the month. These bonds bear an interest of seven per cent, are an unquestionable security, and yet are quoted at only 8114 at 83 per cent.

The bids for the new State Canal Lean of New-York, in a six  $\Re$  cent stock, reimbursable in 1883, were opened at Albany yesterday, (Thursday, 25th.) pursuant to the advertised notice of the Canal Fund Commissioners; and from the gross bids, the awards were made for the full sum of \$1,254,000, at rates ranging from 115-50 to 119-01.

The bank's have curtailed their aczregate loans from \$10,200,000, September S. to \$05,100,000, at the close of last week. Money is now in such domaid that there is a tendency to advance the rates in the street.

### SALES OF BANK SHARES.

The operations of the past month have been quite limited in number and amount. Less fluctuation marks the demand and supply of these securities at all times. They are probably held to a larger extent than any others, for long investment, and largely for account of widows, minors, and corporations; so that in fact the supply may be said to be less than the demand ordinarily. It is seen that very few are quoted at a discount, and even some of these now pay dividends regularly.

No. VI.

SUGGESTIONS TO YOUNG CASHIERS ON THE DUTIES OF THEIR PROFESSION.

A PREMIUM ESSAY, WRITTEN FOR THE BANKERS' MAGAZINE.

BY LORENZO SABINE, OF FRAMINGHAM, MASS.

[THE Essay is reprinted from the Bankers' Magazine for January, 1852; to which are now added by the author, certain notes and emendations. That number of the work being out of print, and as the demand for the Essay still continues, we deem it best to insert it again as amended.—ED. B. M.]

THE Bankers' Magazine is an instrument of good. The observation of every-day life clearly shows that, in consequence of disastrous losses by bank failures, of sorrow and ruin to friends by the misconduct of bank officers, and of wounded feelings by reason of morose and irritable cashiers, many persons entertain strong dislike to banks, and to those who are connected with them. Such persons, forgetting that incapable, unfaithful, and disagreeable agents have been found in all corporations, and that bankruptcies and defalcations have occurred in every walk and pursuit, affect the sentiment of a celebrated English essayist, and say, that "nothing truly good can be expected from men who are ever poring over cash-books and balancing accounts;" while others, relying upon the strange remark of our own great moralist and philosopher, Franklin, aver that the wealth acquired by commerce is

"generally" acquired by "cheating," and that "agriculture" is the "only honest" employment.\*

The Magazine, then, by imparting correct information relative to the management of moneyed institutions, and by teaching bank officers that prudence, skill, and method are as essential to success as integrity, is performing a most valuable service to bankers, and to the whole community. It deserves, and should receive, the pecuniary support of every bank in the United States. So, too, I venture to say, that not only executive officers, but presidents and directors, are bound to increase its usefulness by contributing to its pages the results of their

experience.

Banking has become a part of the very framework of our system of business. Even Mr. Calhoun said as long ago as 1816, when the whole banking capital in the United States was only eighty millions of dollars, that "the question whether banks are favorable to public liberty and prosperity, was one purely speculative. The fact of the existence of banks, and their incorporation with the commercial concerns and industry of the nation, prove that inquiry to come too late. The only question was, on this hand, under what modifications were banks most useful," etc. Banks now exist, in some form or other, everywhere: and will continue, probably, as long as property shall be bought and sold on credit. In all coming time, therefore, we are to have a class of men to deal in money, in promissory notes, and foreign and domestic exchange. The avocation has ever been honorable, to the last degree responsible, and exposed to many and to peculiar temptations.

Wrecked and ruined bank officers are around us on every hand. The world, seemingly more inexorable with our profession than with others, deals out its direst maledictions upon those of us who err, and will hardly forgive the managers of a broken bank, or the officer whose "cash is short," even when there is no other guilt than credulity, too easy good-nature, or incapacity. To stand upon our defence against unjust accusations, and to do what we can to diminish the causes of corporate and of individual delinquency, are duties which we owe to ourselves and to those who are to succeed us. Dispersed, as we are, over a vast extent of country, we can only correct public

It must be admitted that defalcations sometimes occur of a nature to warrant almost universal distrust. In 1808, the Bank of England lost, by the frauds of Astlett, one of its clerks and a nephew of the cashier, the enormous sum of one and a half milion of dollars; the frauds and forgeries of the banker Fauntleroy, in 1824, amounted to over a quarter of a million more; and the defalcation of the banker Stephenson, in 1828, was upwards of a million and a quarter. These are the memorable delinquents in the history of English banking. The first suffered imprisonment in Newgate many years; the second was executed; the last fied to the United States. The largest individual defaulters on this side of the Atlantic, as the fact now stands, have been among the officers of railroads.

As regards bank failures, it may well be doubted whether mismanagement, as a cause, has been as extensive in this country as in Ireland. There, according to Sir Henry Parnell, who is good authority, the issuing of paper money has been carried to such an injurious excess as to be without a parallel, perhaps, in the commercial world. The twenty-five years ending with the year 1825, was a period of nearly general bankruptcy. Eleven failures followed in quick succession; and of fifty banks in operation in 1804, eight alone maintained their standing. During this quarter of a century, Ireland, says Sir Henry, was, "from time to time, involved in immense distress."

sentiment, and afford counsel and admonition to one another, as well as render our knowledge of banking available as common stock, by means of the work established for, and devoted to, our benefit.

Banks with us, both public and private, differ—as none need to be told—in many things from those of England and of Continental Europe. It is known, also, that our system is far from being uniform, and that essential improvements can be made in it. Hence, whatever the value of essays upon foreign banking, papers devoted to our own are far more useful to us, regarded as a class; and hence, too, the necessity for a free interchange of thought by bankers in different parts of the Union.

Entertaining these views, I cannot but hope that the Magazine will be enriched, from time to time, not only with "Suggestions to Young Cashiers on the Duties of their Profession," but with articles on the subject of American banks and banking generally.

I pass now to topics immediately connected with the duties of a Cashier. The limits indicated do not admit of elaborate reasoning, but demand, indeed, that mere suggestions shall be made with the brevity of proverbs. I may be permitted, then, to address myself to

the young officer, directly, and, as it were, personally.

You are to lead a life so confined, sedentary, and in some respects so mechanical, that, unless you observe great care, you will become, in the lapse of years, a sort of machine for computing discounts, counting money, writing letters, and keeping books.\* You are to transact business, and to have constant intercourse, with men of every shade of character, of every variety of disposition, and of every degree of intelligence. Your temper is to be tried by interruptions at the most unseasonable moments, to attend to the calls of the impatient, or to answer the inquiries of the ignorant or inquisitive. You are to be tempted to embark in speculations in stocks; to be solicited to allow overdrawings and other irregularities by the companions of your social hours, and, it may be, by one or more of your own directors; and you are to have the same domestic cares and afflictions, the same personal aches and pains, as other men; and yet you are expected to be ever at your post, to be ever courteous, to stand fast in your integrity, and to seem cheerful, and even happy. In a word, and as Girard said at the decease of his old and faithful cashier: "The bank must go on," whatever your private griefs, or individual disabilities. Your position is thus one of much difficulty, responsibility, and peril; and you need a knowledge of the laws of your physical being, the counsel of wise friends, strict and daily self-examination, and deep religious principle,

<sup>\*</sup> Every person of observation will attest to the need of the caution in the text. Long and close application to one branch of business, and the habit of being at one place for a course of years, produce wonderful transformations in the character. The case of Mr. Rippon, late Chief Cashier of the Bank of England, furnishes an illustration well worth citing. He was connected with that institution for more than half a century, and asked for but a single leave of absence from his post during the entire period, and in this instance, even, he applied at the suggestion of his physician, on the ground of ill health. Permission was granted; and our bank officer departed from London, to be absent two weeks. But the country was without charms; idleness preyed upon his spirits, and the habit of years was so strong, that, at the end of three days, he returned to the Bank, solely to become happy again.

to enable you to sustain it in health and honor. But be of good cheer; be a true man, and you will overcome every obstacle in the way of a long and of a useful life.

Your duties may be considered under various heads. And first, those which are general. Your bank has secrets; and, that they be kept inviolable, adopt a rule to speak of its affairs only to persons connected with you in its management. An incident to which I was a party, may serve as a story, and, perhaps, to show the necessity of the rule here enjoined upon you. Some years ago, I was in the direction of a bank (in a town on the eastern frontier of the United States) which earned a considerable part of its dividends by receiving the notes of the banks of one of the British Colonies, at a small discount, and sending them home for redemption. The general suspension of specie payments occurred; and we were left with an inconvenient amount of these notes on our hands, which the banks, one and all, refused to redeem. The situation of our customers was such, in the mistrust that prevailed, that after much deliberation, we resolved to continue our regular business. The result was that we became indebted to the Boston bank which kept our account, in a sum quite equal to one half of our capital stock. This state of things produced much anxiety. My own disquietude caused many sleepless nights. We were in almost constant session to devise some plan of relief. But we kept our secret. Though solvent and with a surplus, we felt sure that, excited as the public mind then was, a whisper of our condition out of doors would be disastrous. Meanwhile, colonial banknotes accumulated every day. We bartered off some for Mexican dollars at a high premium; we bought a thousand Spanish doubloons with others, and lost nearly one thousand dollars by the operation. These, and similar efforts to reduce our debt in Boston, were too expensive, and we determined, at last, to wait the course of events. Months elapsed: but we still kept our secret. In time, intelligence reached us that one of the debtor banks had ordered from New-York twenty-five thousand dollars in American gold, and that the precious coin was actually on the way in a vessel called the Teazer. We met without delay. A vote was passed by a majority of one, to send the sheriff of the county to sea to intercept the Teazer on her passage to the colonial port to which she was bound, and, finding her within the jurisdiction of the United States, and within the waters of the sheriff's own county, to attach the gold on our account. The proceeding, under the circumstances, was thought hazardous; three of our number refused assent; the sheriff demanded a bond of indemnity. We designed to conduct the enterprise quietly; but, by means which we never ascertained, the colonial bank got wind of our intention, and dispatched several pilot-boats, with their directors on board, to defeat us. The sheriff was a shrewd man; and, accompanied by a sagacious old shipmaster, was successful. The cashier of the debtor bank soon presented himself at our counter, and demanded the gold as his private property. A person in whom he reposed confidence intimated to us that an officer, with a writ of replevin, would take the well-canvassed box from our possession. Thereupon, three of our number

hurried to our vault as fast as feet would move, divided our prize, and strode rapidly homeward. My share, in the excitement of the moment, or in my excess of zeal, was ample. Afraid to use desk or drawer as a place of deposit, I concluded to thrust my part of the "spoils of victory" into a cat-hole in the cellar floor, over a drain. The end was not yet. The master of the Teazer, on his arrival at the port of destination, was sued for the gold, and cast into prison; and before terms of settlement were arranged, many other vexatious measures disturbed us. The affair gave rise to a great deal of talk, and some incidents which I have omitted, as not pertinent to my purpose, afforded infinite amusement to the lovers of fun. The secret of our great indebtedness to our Boston bank was, however, treasured for years.

You should embrace every opportunity to acquire information as to the standing of your customers; and whatever is imparted to you on the subject, whether in confidence or otherwise, should be commu-

nicated to your directors, and to them alone.

You should become acquainted with the laws relative to banking, and especially with those of your own State; and should be familiar with some work which treats of notes and bills, of the liabilities of sureties, drawers, and indorsers. I recommend as the easiest way to obtain, and to retain, knowledge in these particulars, that you make a manual, or brief digest, with marginal references to the authorities which you consult. The best books are the latest American editions of Bayley on Bills and Notes generally, and Story's Commentaries on the Law of Promissory Notes. To master these works, or even to obtain common knowledge of the immense learning which they contain, will require time—much time. But the leading principles applicable to promissors and other parties to commercial paper, are easily fixed in the memory, and no time should be lost in consulting the latter treatise, at the very least. So, too, chapter eleven of Story, which relates to checks, should also be well studied, since this kind of currency has, as that distinguished jurist observes, "grown into daily and general use," and will be presented at your counter almost as often as money itself. I recommend to the young cashier to devote a part of his leisure to professional reading of a more general nature. The history of the system of credit is not only curious, but interesting and instructive. Strangely enough, as he will find, banking owes its origin to the Crusades, for the earliest institution of which there is any account was a mere bank of deposit, established at Venice, late in the twelfth century, for the purpose of aiding those who fought to win the Holy Land from its unholy possessors. Such was the first ele ment; and the degree of security and facility of commercial transac tions of the period may be seen in the fact that, in England, contracts between individuals were discharged by payments in cattle, horses, dogs, and even hawks; and that rents, fines, and taxes due the crown were paid in the same kinds of property, in products of the soil, and in merchandise generally. In a word, the idea of paper money based on the precious metals, or on personal estate and credit, or on lands, had not been conceived, we may fairly conclude, anywhere. Next.

if the notes of my own reading be accurate, and equally strange, we hear of some sort of paper credit, early in the thirteenth century, not in any trading kingdom of Europe, but in far-off, and, as we commonly say, in barbarous, China. So, again, towards the close of the lastmentioned century, we are told that the hated and hunted Jews and Lombards invented the bill of exchange, which afforded means for the silent and secret transfer of funds from country to country, to the infinite discomfiture of robber kings and of robber outlaws. Next, probably, in chronological order, was the promissory note, which strange device, grave and learned judges, in solemn wig and ermine, dared at length to pronounce to worn and weary litigants, might, if traffickers so willed, pass current from one person to another, and be lawfully collected by the final owner.\* Still again, about the middle of the fourteenth century, we meet with the origin of public scrip in the governmental certificates of Florence, which, I suppose, were the first ever issued in Europe. Thus we have five elements in modern banking. Two others, namely, those of discount and circulation, were yet wanting. Neither power was conferred upon the Bank of Amsterdam, which, founded near the opening of the seventeenth century, was designed merely, as it would seem, to check the evils of a clipped and worn metallic currency. Nor was the Bank of Hamburg, which was established immediately after, hardly more than an institution of deposit and transfer. In the progress, however, of civilization, of commercial dealing and necessity, we come at last, and towards the close of the seventeenth century, to the Bank of England, which was invested with authority to receive deposits, to buy and sell exchange, to aid in the management of public securities, to discount promissory notes, and to issue a paper currency. And so it appears from this rapid view, that more than five hundred years elapsed before all the elements of modern banking were combined, arranged, and reduced to a system in which statesmen and merchants reposed confidence.

The young cashier having, by his researches, convicted me of inaccuracy, or having established the truth of the foregoing outlines of bank history, may, as opportunity occurs, pursue the subject still further. The first charter of the Bank of England is accessible, and he may study it with profit, and to ascertain the immense progress which has been made in the principles of banking, whether as relates to rights of stockholders, or to public convenience and safety. He will find valuable lessons in the legislation of his own country; in the issue of paper money prior to the Revolution, which at times flooded the Colonies, and which, in spite of the clamors of our fathers, was suppressed by Parliament; in the marvellous tales and traditions which have come down to us of the never-to-be-forgotten "continental money," without which the bonds of colonial vassalage would not have been broken when, and as, they were; in the earlier charters of the

<sup>\*</sup> As late down as the reign of WILLIAM AND MARY, the courts of England refused to consider an inland bill of exchange a legal instrument; nor was it until the time of ANNE, that a promissory note, in the hands of an indorsee, could be collected by law of the maker.

different State governments; and in the two charters of Congress of the great national institution which has now ceased to exist.

This general inquiry concluded, he will have improved his own mind, and be ready to meet and to reason with those who, because the system has not been perfected in a century and a half, (dating from the establishment of the Bank of England,) demand its entire abolition, or at least such changes as would render it powerless for good, alike to individuals and to communities. He can say and prove that CREDIT, wide, liberal, beneficent credit, belongs to the era of liberty, and that it was unknown even in free England until after the expulsion of the Stuarts, and until the Revolution there had secured personal freedom. He may stand upon the emphatic declaration of a great statesman,\* that the system of credit, as it now prevails, is the vital air of commerce, and that "it has done more, a thousand times, to enrich nations than all the mines in all the world." He should, indeed, admit that its fluctuations, its ebbs and flows, sometimes cause desolation and ruin; yet he should not fail to insist that good and wise men steadily strive to improve it—that, as sweeping conflagrations allow of the straitening and widening of streets; and as disasters in travelling by steam suggest more careful management and better machinery, so do bank failures and the delinquencies of bank officers, however appalling the circumstances at the moment, serve to discover and to apply new checks and new remedies.

If your bank is old enough to have been through "a crisis," and if you have not served in it as an inferior officer, you have much to learn of its past business. Such an institution, for example, has a "suspended debt" account, or at best overdue paper secured by mortgage or other collateral; and assets of this description always have a history, and sometimes a very intricate, a very perplexing one. But you must become master of that history. Directors change every year; and in a little time, all who were at the "board" when this class of paper was taken will have vacated their seats; while, then, some are still in the direction, make written memoranda of the principal facts.

Let it be manifest to your associates and stockholders, that you feel an interest in every thing which relates to their welfare. To work the whole of your capital and of your deposits, to keep both actively employed at all times, and yet to be always able to meet your bills at the point of redemption, require great wisdom; and the most skillful and experienced financiers sometimes find themselves at fault for the moment. Still your duty demands continual experiments to effect this great object; the recollection and correction of your own mistakes of judgment, as well as a careful eye upon some of your customers, who obtain discounts under promises to give your money "a good circulation."

Need I suggest the benefits of a fixed system, and of method, even in matters seemingly of little consequence. Every body finds—as seamen have it—that "a stern chase is a long chase." The business

\* Mr. Webster.

of to-day should never be deferred till to-morrow. Answer letters, and file papers, at the instant. Remember every thing, if possible; but, trusting to memory in nothing, let your books contain a record of all transactions. Allow no outstanding bills against the bank; and have a voucher for the smallest item charged to "Expense Account."

You can be, and you ought to be, ready for an "examination" by the "Commissioners," or other functionaries of the government, and of your own "board," without previous notice, and without the slightest special preparation. In fine, close your vault daily with the reflection that no act has been neglected, and that, if sickness or death should occur, "the bank can go on" with no loss to your family, sureties, or stockholders. Do not smile if I add, that your banking-rooms should be swept, and your desks and counters be dusted daily; that one "slut-hole" is ample for all the twine and waste-paper; and that the accumulation of official papers and memorandums in your private drawer will cause both you and your associates serious delays and much inconvenience.

Panics and pressures are as certain in banking as storms in winter. When either exist, firmness and courage, if not really possessed, must be assumed. You are presumed to know the nature and extent of your resources under all circumstances, and at periods of general distrust especially; and if the amount of those immediately available are insufficient for every possible call upon you, thus advise your directors without delay. Should there be "a run for specie," pay your bill-holders the kinds of coin they ask for so cheerfully, and with so careless an air, that they shall observe no reluctance to part with it, but,

on the other hand, an apparent joy to be rid of it.

A knowledge of human character is indispensable. Study it. The "actions, looks, words, and steps" of your customers "form an alphabet;" and your "eyes are spectacles to read others' hearts with." Careful, close, and continued observations will enable you to detect a counterfeit man as readily as you now do a counterfeit bank-note. My own experience is, that those who change countenance, or the weight of the body from one foot to the other, when meeting a full, searching, and fixed gaze, are not truthful; that those who ask for additional accommodations, prefacing the request with a story divided into acts like a drama, are already bankrupt; and that those who petition in whispers, in unnatural tone of voice, in a cant, or a whine, are hypocrites. Some years hence, I shall be glad to ascertain how nearly your experience accords with mine.

You should be courteous and respectful to all. Self-command is a great virtue; indulgence of passion is a great fault. Impertinence and stupid ignorance might sometimes be rebuked, were it not for the danger of contracting a morose and irritable habit of speaking. There is no loss of dignity, or of self-respect, in perfect silence under the greatest provocation, and that, accordingly, is your safest course. The cashier's popularity or unpopularity gives character to a bank. The directors are seldom visible, and sometimes unknown, to occasional customers; but their executive officer is an ever-present and a known

man, and should bear in mind the Latin proverb, namely, to "be cautious what he says, when, and to whom."\*

Should you acquire a reputation, you may be solicited to change your place; or, becoming discontented, may seek to do so on your own motion. In the former case you are to consider your directors as your friends, and, stating all the facts fairly, obtain their views before taking a single step to meet the overture made to you. This is an imperative duty; and performing it in honor, and acting under the advice of wise counsellors, you can hardly come to a wrong conclusion. I assume here that your bank is sound, and that it is under the direction of competent and safe men. If unfortunately otherwise, if your reputation be at stake, and your directors, or a governing part of them, are ignorant, or regardless of the principles of banking, or are "speculators," who seek their own accommodation, you should retire at once. But upon this point I will not dwell, since it is to be hoped that such

institutions and such men have nearly passed away.

It is related that the eminence of the five brothers Rothschild, as bankers, is to be attributed in a great measure to their strict observance of their father's dying injunction, to "remain united." may it be so. Unanimity in the direction of a bank is always an element of success; and the result of my observation in this regard is, that more losses occur from divisions, than from any other single cause. Accommodation notes, large and standing loans to particular parties, and similar departures from legitimate banking, are only to be tolerated in cases which receive the assent of the entire direction. Yet, I have known one and all of these departures to be consummated, time and again, by directors who owned the smallest possible amount of stock, in opposition to the remonstrances of older and abler associates who were large stockholders; and years afterwards, when legal remedies had been exhausted, and levies and set-offs had failed to restore more than costs of suit, have personally made wearisome journeys and devoted weeks to the service of closing up, as I best could, these unfortunate illustrations of the rule that "a majority should govern" in the directors' room, as in politics. In short, such, in my view, are the evils of the majority principle in this connection, that I would counsel a cashier, whether young or old, to insist upon a reasonable change, and a change refused, to seek an institution more wisely, more safely conducted.

You may be discontented without cause. I remember to have read a story, in which one of the characters was in possession of every thing that heart could ask, but was miserable from this very circumstance, or because he wanted—a want. Such persons exist in real life. Be not of that unhappy class. Accommodate yourself to your condition. Do not seek for happiness in change of place, but in change of disposition. "The lazy ox wishes for the trappings of the horse, and the steed sighs for the yoke," is an old saw that has not yet lost its meaning. Nor should the topic be dismissed without recalling the pithy epitaph com-

<sup>\*&</sup>quot;A bill broker," says Mr. Windham Beaves, "should avoid babbling, and be prudent in his office, which consists in one sole point, that is, to hear all and say nothing."

posed for the hypochondriac, who quacked himself into his grave: "I was well; but by endeavoring to be better—am here." Let the young cashier heed the moral contained in these several apt sayings, and remember that care and perplexity exist exerywhere. To smooth and fashion the rough stone of life is a religious duty. The change of one's home involves a change of society, of privileges of worship, of schools, of facilities in travelling, of household expenses, of access to books, and various other essentials; and should be carefully considered in every aspect before it is actually undertaken. And I bestow the more attention upon the point, because the propensity to remove from one place to another is so common, and because, within the circle of my acquaintance, many have been ruined, and but few have improved their condition or increased their happiness, by seeking a new abode. In middle age, the experiment is doubly hazardous. Take up a full-grown tree, and will it live unless some of the old earth go with it? Sunder the ties of sympathy and affection; exchange old faces and associates for new ones, and what is the condition of a man?

To resume my personal address to the young cashier. You should not possess an overweening desire of praise, nor invite commendation.

Nor should you be intoxicated with your own merits.

You should never speak of your official acts, except in explanation and in self-defence. In all pleasantry, I will add, that, in old age, you may tell the son who succeeds you what you were in your youth; but, now, be content with the quiet appreciation of others. Delicate attentions and marks of respect are the surest and best manifestations of regard, and if you have these, do not pine in discontent or discouragement.

In your official intercourse with the president and directors, observe great deference; and at the "board" it may be proper to address the

former by his title.

Never speak of the real or supposed faults of character of a director in the social circle, nor bear tales or remarks from one director to another. Whatever your preferences, likes, and dislikes,—and you will probably have both,—your conduct should be uniformly respectful to all. Whenever your opinion is asked, or given, without solicitation, state your views modestly, and in a conversational tone of voice. Should the "board" differ from you in judgment, and decide contrary to your convictions, betray no feeling, but promptly and cheerfully execute their vote.

Frequent communications with the directors, relative to the general concerns of the bank and to your own particular duties, will be of essential service; since they will thus obtain a knowledge of details, and you will have the benefit of their reflections and suggestions. "Conference," says the wise Lord Bacon, "maketh a ready man."

Your style of living is a matter of momentous consequence; and, possibly, the hinge on which your final destiny will turn. Not only live within your income, but so regulate your expenses that, unavoidable misfortunes or sickness excepted, you shall be sure to save at at least a quarter part of your salary, as a fund for old age; unless,

indeed, your patrimonial estate be ample for such a purpose.\* But, whatever be your receipts or expectations from other sources, do not allow your expenditures to exceed your personal earnings. Be this the

great economic maxim of your life.

Economy is the parent of honesty, of freedom, and of mental ease and quiet. Poverty can never enter your abode, if content with satisfying your real wants; while you will never enjoy independence, if you live in accordance with the world's caprice.† If you possess an inordinate craving for great wealth, or a desire to indulge in luxuries and amusements such as men of fortune alone can afford, you have mistaken your profession, and should abandon it. For your life, if you remain in it, will be a perpetual struggle against your natural inclinations; and the danger is, that, finally yielding to them, you will involve yourself in irretrievable woe.

The road to disgrace is short. Persons who have traced the footsteps of more than one unhappy bank officer that has trodden it, have found that Extravagance and Defalcation were but a few strides apart. A sensual man is disqualified, by his very physical organiza-

† The great English banker, Thellusson, who, at one time, was partner with Mr. Necker, the celebrated French financier, left three sons, and a fortune of three and a half millions of dollars, which estate, he said, he acquired by "industry and honesty." In his will he remarks: "It is my earnest wish and desire that my sons avoid ostentation, vanity, and pompous show," etc. The three, it may be added, became members of the House of Commons, and the eldest, a peer of the realm.

<sup>\*</sup> I designed to say a word in the text on the subject of salaries. As a general rule, the compensation to bank officers is too small. According to a return to Parliament, in 1823, the number of persons employed in the Bank of England and its branches, was nine hundred and forty, who (to average the salaries) received only £225, or about eleven hundred dollars each, per annum. Since several who filled the higher posts were paid very much larger sums, it is evident that a considerable part of this numerous corps could not have received more than a moiety of the above average. Yet, as at the same time there were one hundred and ninety-three on the pension list who enjoyed annually (on the average) £161, or about eight hundred dollars each, the faithful officers of that institution who were then in actual service, could hope for relief in their declining years. In the United States, the system of pensions is not, perhaps, practicable or desirable. But since marriage, a flock of little ones, the owning of a house unincumbered with mortgage, and a choice collection of books, are all Virtue's sentinels; directors ought always to have reference to the support of a family in fixing the compensation of their executive officers. Indeed, such officers, like capable and faithful men in other pursuits, should be allowed to provide something for old age. It is fair, I suppose, to assume that the expense of the executive department, as a common thing, is not far from one per cent on the capital stock, or, in the proportion of one thousand dollars salary to one hundred thousand dollars capital. If this be so, it is manifest, at a glance, that a large part of the bank officers in the United States (as gentlemen are now compelled to live both in city and country,) are required to consult the maxims of "Poor Richard" every day, in order to secure a moderate competence. The interests of stockholders are not promoted, in the long run, by low salaries; for low salaries, not infrequently, as experience shows, induce speculations in st

thouse or commons, and the eldest, a peer of the realm.

† "The London banker of the old school," says Lawson, "had little resemblance to the modern gentleman who is known by the same title. He was a man of serious manners, plain apparel, the steadiest conduct, and a rigid observer of formalities. As you looked in his face, you could read in intelligible characters that the ruling maxim of life, the one to which he turned all his thoughts and by which he shaped all his actions, was: 'That he solve would be trusted with the money of other men should look as if he deserved the trust, and be an ostensible pattern to society of probity, exactness, frugality, and deserven." And further, says the same writer: "The fashionable society at the West end of the town, and the amusements of high life, he never dreamed of enjoying.

tion, for any office in the executive department of a bank, and ought no more to be there than in a pulpit. I make the remark considerately,-for good reasons,-and not to round out a period. And should this Essay meet the eye of the father of a son ready, by age and education, to enter upon some employment, I venture to counsel that, if banking be thought of, the moral qualities and the strength of the appetites, as developed in early life, are the first things to be considered. The youth who, in childhood, stole slyly to the closet for his mother's sweetmeats, who was never content at table with the share of niceties allotted to him, who shirked his known tasks and imposed their performance upon a younger and more dutiful brother, and who, as years were on, evinced a disposition to rely upon others, and to earn nothing for himself, but yet who showed a determined purpose to feed on the best, and to dress in the finest—such a youth, though as quick at figures as Colburn himself, should never be placed in a bank.

"Speculation in stocks" is another fruitful source of ruin, and I cannot forbear a word of admonition. The careful investment of your earnings or patrimony, and a similar service for friends and customers, define, in my judgment, the general limits of your operations in the stock-market. To say nothing of the hopes and fears consequent upon the adventures of a dealer, and nothing of their influence upon your mind and temper - already sufficiently tasked - I may ask, in all seriousness, What assurance have you, what assurance can you have, that your virtue will resist the temptations sure to beset you? Once embarked and affoat on the stock-exchange, either alone or with partners, you cannot move without means: and who shall answer for the money intrusted to your care? Who shall answer that you will not "borrow" from your vault—as others have done—feeling sure that you can "return" the sum you need "in a few days, with interest"? At the outset you will not "risk much;" you desire only "to gain something to add to a moderate salary." But encouraged, at length, by your own success in small operations, or excited by the real or reported good-fortune of those around you, the resolution may be formed to win a competence at a single cast of the die: You lose, and are RUINED! Be warned, I entreat, in time. No bank officer-in charity we may believe—ever meant to be a defaulter: no one, at the beginning of an irregular course, thought defalcation and disgrace possible. Yet, alas for the many victims of self-deception! alas for the self-confident, and for those who neglected the great duty of self-examination! Most affectionately and earnestly do I charge you, as you value your peace, as you would save your integrity, as you would not be driven forth, a broken and shunned man, to resist every seduction of avarice from within, and every solicitation of companions from without. No matter what pretense or excuse a stifled conscience may allow you to

and would have deemed it nothing short of insanity to imagine that such an act was within the compass of human daring, as that of a banker lounging for an evening in Fop's Alley at the opera, or turning out for the Derby with four grays to his chariot, and a goodly hamper swung behind, well stuffed with perigord pies, spring chickens, and iced champagne."

frame, the cash in your vault is not your cash, and you touch it for your private benefit or relief even as a robber, and at the peril of your soul! Think, ere you yield, of the long roll of sad-faced men who once were honored and trusted, but who, when tempted, fell! Think of those who, wrecked in character, in fortune, and in hope, have become bloated, ragged wanderers! Think of those of whom fathers and mothers, and even wives and children, dare not speak save in whispers, and at the family fire-side! Think of those who have been hurried to the prisons and to the tribunals! Think of the graves of the suicides!

A single warning more, and I pass to less painful topics of discourse. Allow no customer to overdraw his account upon your own responsibility, or without the express sanction and authority of directors.\* The habit is a bad one, every way, under any circumstances; and I wish it could come to an end at once, everywhere and for ever. But if it be permitted in particular cases in your bank, have neither part nor lot in the matter, save to execute a positive order. Discourage the practice in every possible manner, and if fortunate enough to put an end to it, you will deserve the praise of every correct banker in the country. At your post, and in bank hours, you are to have no friends to indulge with favors, no enemies to punish with refusals. Then and there all men should be alike to you. The motto of the Bankers' Magazine should be yours, without reservation or condition.† In fine, perform no act that you would omit in the presence of the full "board," or in that of the sureties on your official bond. This rule will carry you safely through every difficulty and every temptation.

Pardon me if I now suggest the importance of maintaining a reputation for strict, exact veracity. An aged judge is said to have remarked, ironically, that "half the cases he had tried on the bench arose from 'good understanding' between the parties;" and by this he meant, that half-made bargains and agreements lead to disagreement and litigation. Avoid misunderstandings from this source. Many, indeed most, of your transactions will be upon verbal contracts. But you may use words so terse, so precise, that misconception will be hardly possible.

The honor of a cashier and the honor of a woman are alike. Suspicion of either in the public mind is as fatal to reputation as convicted guilt. Stand by, stand for your honor, then, against all comers, and to the last. Preserve your own respect, though you be fed by the hand of public or of private charity. Napoleon, at the hour of his downfall, deposited the remainst of his fortune with Laffitte, and refused an offered and customary certificate, saying: "I know you—I hold you to be an honest man." The Paris banker, in the course of events, became a cabinet minister; but such a testimonial to his probity from a man whose estimate of human virtue was too low to be just, and who, at the

<sup>\*</sup> I believe that no customer of the Bank of England, whatever his rank, is allowed to overdraw.

<sup>† &</sup>quot;No expectation of forbearance or indulgence should be encouraged. Favor and benevolence are not the attributes of good banking. Strict justice and the rigid performance of contracts are its proper foundation."

‡ Five millions of francs.

moment he uttered it, was, as he imagined, the victim of faithlessness and treachery, will be remembered when the records of his political honors are torn and scattered. But yet, any man, in his own circle, may, if he will, have it said of him: "I know you—I hold you to be an honest man." My young friend—now starting upon a banker's career—burn these words deep into your memory!

As in some things there are marked distinctions between banks in different sections of the country, and between country and city banks in the same State, and corresponding differences in the duties of a cashier, it is obvious that no series of "suggestions" can be alike applicable to all. But I may still hope that the young and inexperienced officer will not fail to find some useful hints in the preceding remarks,

whatever his particular position or special charge.

And while this may be so, the country cashier may yet need cautions and recommendations adapted to his peculiar official and social relations. Such, then, as I deem the most important, I shall briefly and respectfully offer. First, as it sometimes happens that the person selected for the executive department has had little or no experience in banking, and is to be connected with directors whose knowledge is as limited as his own, the duty of consulting well-informed officers of city banks is manifest. The country cashier is often alone. Without paying or receiving tellers, book-keeper, or discount or collection clerks, but invested with the functions of all, skill, system, and an economical use of time are indispensable to success. I have known gentlemen who, though possessing quick and clear perceptions, and almost every other natural endowment, were still, at the time of their election, incapable of opening or of properly keeping a single bank-book. Some of these, remarkably cautious in their habits of business, and profiting by mishaps, escaped serious losses, and, in the end, became accomplished officers; while others, more sanguine in temperament, and more selfconfident, and unwilling to seem novices, involved themselves in difficulties which caused them much mental disquietude and pecuniary embarrassment. Now, it is apparent at a glance, that both classes, had they started right, might have avoided a great deal of painful ex-

I commend to you, therefore, if not bred to banking, the sources of information which are open to you, and to all who desire to increase their knowledge. Accuracy in the count of money is the first, accuracy in the keeping of accounts is the second qualification in a country cashier; and, while you may acquire the first by practice, you may go

wrong with your records all your life.

A small bank should be conducted on a plan as systematic and as regular as a large one. Experience has shown, I think, that bank accounts should be kept in "double entry," and that each department of bank business requires a separate book. Thus, in an institution with a capital of only fifty thousand dollars, I consider that a general and a deposit leger, that books for cash, deposits, discounts, credits, collections, and trial-balances, are as essential as in one of a million of dollars. And the same remark is true of stockholders and directors' records, of a book to show the state of the bank, and of another to exhibit the paper to mature in any given week.

The general and the deposit leger may be one; the former occupying some seventy-five or one hundred pages, and embracing accounts with things, the latter with persons. The cash should be settled daily at the close of business, when, also, a trial-balance should be taken of the general leger postings. On the last business day of the month, the depositors' accounts should be adjusted, and the balance of each be transferred to the trial-balance book to ascertain whether the deposit leger has been correctly posted. The daily settlement of the cash—neglected in some country banks, unless the reform has been very recent—need occupy but a few minutes, since a vault-book, accurately kept, leaves for actual count the cash in drawer only. "Memorandum checks," and similar vouchers,—to say nothing of the grave consequences which sometimes result from their use—are great pests in a cashier's drawer, and should not be allowed there, except in the most urgent cases. Some cashiers keep "ragged bills," never intended to be reissued, in vault for months, and even years; but the practice is attended with obvious risk and inconvenience, and should not exist.

As already intimated in another connection, your directors, however worthy and respectable as citizens and gentlemen, may be poorly versed in the science of banking, and may not, at first, appreciate the force and the reason of the rules which you deem necessary to adopt, in transactions with them and with others. But evince no impatience. I assume that a majority of any and of every "board" are men of honor, and mean to do right; and that, in explanations and conversations with yours, you have but to calmly point out the evils likely to arise from a course opposite to that which you insist upon, to obtain their approbation. Yet you yourself should be well assured that these rules are consonant to law, or are such as are imposed in well-regulated banks, or such as, in your peculiar position and relations, are imperatively demanded.

It is possible that your predecessor allowed improper indulgences to a particular director, or had favorites among your customers, and that you will feel constrained to put an end to these and to similar irregularities. To accomplish this, in harmony, will require all the wisdom and good-nature that you can command. It is possible, too, that overtures may be made to you to grant favors inconsistent with your duty; but, as such cases will arise from thoughtlessness or ignorance, as often as from unworthy motives, you should be silent, except when corrupt intentions are too apparent to be mistaken, or the importunities of the same person become so frequent as to be troublesome.

The customers of a country bank, unlike the merchants of large and busy cities, expect of the cashier some inquiries about their families, and remarks upon the news of the day, upon the crops, the weather, and other matters of personal or local interest. To a reasonable extent this expectation should be gratified. But discussions across your counter on topics of sectarian theology and party politics are to be avoided—entirely avoided. Nor, if you hear, should you reply to, or take part in, tales of scandal and neighborhood gossip. Polite to all, sociable to a degree not to interfere with your duties, inviting

and giving friendly greetings, your deportment is yet to be dignified, and such as becomes a well-bred gentleman.

You will transact business with persons who cannot even write a note of hand in proper form; with those who cannot be made to acknowledge the necessity of a notice to an indorser; and with those who will pertinaciously insist upon having their own way, whatever your reasoning or objections to the contrary. Teach the ignorant, without giving them pain; be firm with the self-willed, without evincing impatience or anger; for the smart of a sharp word, or of a proud toss of the head, is sometimes felt for years. "Contempt," says an Eastern proverb, "will penetrate the shell of a tortoise;" be sure to remember, that it will pierce deeper than the epidermis of a fellowman.

To require, and to insist upon, regular bank hours will occasion some difficulty in some places. People whose business at banks is rare, seem to forget that a cashier, like other men, has a love of fresh air, or that he needs exercise and relaxation; and thus cannot or will not understand why he is not ready to accommodate them early in the morning, and late in the evening. These persons seek him in his moments of rest and recreation, ask him to receive money at his house, or in the village stores, and complain if he refuses so reasonable requests. You will be unjust to yourself if you submit to these, or to similar demands. The intervals between bank hours are yours by positive contract, and by the very necessities of your physical and mental being. Do not permit inroads upon them, save in extraordinary exigencies; in these, leave your bed even, to serve a customer. Still, as loose and unsafe habits may have been encouraged by your predecessors, or countenanced by directors, measures of reform will be odious, unless gradual. Under kind and considerate treatment your laggards may become punctual, and untimely requests to open your vault entirely cease.

A single "suggestion" more. The private and social relations of a country cashier are of consequence, and ought not to be overlooked. And, first, a salary officer, under ordinary circumstances, needs not to be in debt for his personal or family expenses; and, as cash payments are sure to show whether he is "living beyond his means," may I not commend the safe rule of "paying as you go?"

Again, may I not be allowed to suggest the duty of constant attendance at church, even though you cannot worship with persons of your own faith; and also of manifesting an interest in schools, public lectures, lyceums, and other means employed to promote the welfare of society. The community in which you live have a claim upon you, not only for an exemplary life, but for contributions of money in proportion to your ability, to aid in the maintenance of the religious, literary, and benevolent associations established among them.

To conclude. Should it be thought that I might have omitted the discussion of some topics, and have treated others with greater brevity, I submit, with deference, that I have endeavored to be a careful observer. More than twenty-five years have elapsed since the commencement of my connection with banks and banking; and, as I now

look back and recall the facts elicited by judicial inquiry, and the facts embraced in other well-authenticated accounts which relate to bank officers who have fallen, never again to rise, or whose lives have been saddened and embarrassed by want of firmness in resisting the allurements of pleasure, or the solicitations of the companions of their social hours,—by an overweening self-confidence,—by too great faith in others; as, too, I remember the complaints against another class, who, though without a moral stain, have still injured themselves and the institutions with which they are concerned by churlishness and irritability; I find no cautions and admonitions to omit, no recommendations that may not, I think, assist in forming the character of the officer for whom these suggestions are intended.

A single word more. Many of the cashiers whose private virtues and professional ability adorn the annals of banking in the United States, receive salaries nearly equal to the emoluments of cabinet ministers, or military officers of the highest rank, and are intrusted with powers so ample, that they seem to be private bankers, wielding their own capital. These gentlemen have attained the crowning honors of their profession. Let the "young cashier" aim to reach the same eminence among men, and among bankers. Let him remember that, whatever the influence of friends at the outset of his career, his position in the maturity of his years must, in the very nature of things, depend upon himself, upon his capacity, his courage, and his probity.

I have here spoken to him as to my only son, and take my leave, in the earnest hope that, in the labors of some one of his seniors, communicated to the Magazine upon the invitation which, perhaps, I have unwisely accepted, he will be sure to find a path marked out for him which will lead him to the rewards of a well-spent life.

A CUSTOM-HOUSE ACCOUCHEUR.—Madame Augustine R., a pretty blonde of from twenty to twenty-five years, embarked lately at Calais for Dover. Her invalid appearance excited the interest of all the passengers, who felt great anxiety lest sea-sickness should bring on a crisis which evidently could not be long deferred. She crossed the Straits, however, safely, and upon landing was placed in an arm chair, and salts were held to her nose, while an occasional groan went to the heart-of all her travelling companions.

On the wharf, a custom-house officer was observing the disembarkation, and seemed to feel a warm interest in the pretty French-woman. He approached and offered his assistance, informing her that he had some knowledge of medicine, and, though the lady assured him that she felt better, and begged to be carried immediately to the hotel, he protested that it could not be done without danger, and by his philanthropic authority she was taken to an apartment of the Custom-House, and a midwife sent for.

As the officer had foreseen, after begging to be released for a quarter of an hour, she was safely delivered of two polerines, fifteen scarfs, seventeen pieces of lace, six reticules, twelve pair of silk stockings, thirty-eight of cotton, and forty-eight Lyons handkerchiefs.

The mother and children are doing well.

### FOREIGN BANKING INSTITUTIONS.

#### I. THE BANK OF FRANCE.

From McCulloch's new Commercial Dictionary.

The Bank of France was founded in 1803. The exclusive privilege of issuing notes payable to bearer was granted to it for 40 years, and was continued by a law passed in 1840 (confirmed in 1852) till 1867. This law was preceded by a very able Report, drawn up by M. Dufaure, in which, among other questions, the policy of having only one bank of issue in Paris is examined, and decided in the affirmative. The capital of the bank consisted at first of 45,000,000 fr.; but it was subsequently increased to 90,000,000 fr., divided into 90,000 shares or actions of 1000 fr. each. Of these shares, 67,900 passed into the hands of the public; 22,000, having been purchased up by the bank out of the surplus profits, were subsequently cancelled; hence the capital of the bank consisted, previously to the Revolution of 1848, of 67,900,000 fr. (2,716,000l.), exclusive of a reserve fund of 10,000,000 fr., since increased to 12,980,750 fr. But, notwithstanding the laudable skill and caution with which her affairs were conducted, the bank could not avoid suspending payment under a decree of the Provisional Government of the 16th March, 1848, to which and to the city of Paris she had to make large advances. To set some limit to the abuses that might have taken place under the suspension, the maximum circulation of the bank was fixed, by the decree now referred to, at 350,000,000 fr.: while, in view of supplying a currency suited to the smaller class of payments, she was permitted to reduce the value of her notes in circulation from 500 to 100 fr. At the same time, or soon after, the departmental banks, or banks which had been established in some of the principal provincial towns, were consolidated with and made branches of the Bank of France. We subjoin a copy of the decree of the 27th of April, 1848, by which this amalgamation was effected.

Art. 1. The banks of France, of Rouen, Lyons, Havre, Lille, Toulouse, Orleans, and Marseilles are united.

Art. 2. The departmental banks above enumerated will continue in operation as branches of the Bank of France, conformably to the regulations stipulated in the decree of the 18th of May, 1808, and the ordonnance of the 25th of March, 1841.

The present number of the administrators of the departmental banks is maintained, as also the boards of discount, organized for the service of several of them.

The number of shares, the possession of which is at present required as a guarantee from the directors, censors, administrators, and members of the councils of discount of those departmental banks, is provisionally maintained.

Art. 3. The shares of those banks are annulled, and the holders shall receive in exchange shares of the Bank of France at a nominal value of 1000 fr. for a nominal value of 1000 fr.

Art. 4. In order to execute the above article the Bank of France is empowered to issue 17,200 new shares, which will increase its capital to 85,100 shares of 1000 fr.

Art. 5. By the cession of those new shares to the shareholders of the banks of

Rouen, Lyons, Havre, Lille, Toulouse, Orleans, and Marseilles, the Bank of France shall become proprietor of the capital of those banks, and be made chargeable with their engagements. The reserve funds existing in each of those banks shall be added to the reserve fund of the Bank of France. The uniting of landed and chattel property, resulting from the present article, shall be subjected to the fixed registry duty imposed on deeds of partnership.

Art. 6. The Bank of France is authorized to add to the maximum of circulation, fixed by the decree of the 15th of March last, the maximum of the circulation fixed for each of the departmental banks by the decree of the 25th of the same month.

From the date of the promulgation of the present decree the notes issued by the banks incorporated with the Bank of France shall be received throughout the Republic as a legal tender by all the branches of the public treasury and private individuals. The holders of said notes shall have to present them to the Bank of France, or to its branches, within the following six months, in order to exchange them for notes of that bank. Beyond that period those notes shall cease to be current as a legal tender, but the bank of France and its branches shall not be exonerated from the obligation of exchanging them.

Art. 7. The inspectors of the finance department, on an order of the minister, may verify the situation of the branch banks.

Art. 8. In future the branch banks of the Bank of France shall bear the following denomination: "Bank of France, Branch Bank of ——."

|         |             | Skares. |            | Fr.        |
|---------|-------------|---------|------------|------------|
| Bank of | Rouen,      | 3,000 . |            | 3,000,000  |
| **      | Lyons       | 2,000 . | <b>.</b> . | 2,000,000  |
| "       | Havre,      | 4,000 . |            | 4,000,000  |
| 44      | Lille,      |         |            | 2,000,000  |
| 44      | Toulouse,   |         |            | 1,200,000  |
| 44      | Orleans,    |         |            | 1,000,000  |
| 44      | Marseilles, |         |            | 4,000,000  |
| Doub of |             |         |            | 17,200,000 |
| Dank of | France,     | 1,900 . | • • • •    | 69 900,000 |
|         | 8           | 5,100 . |            | 85,100,000 |

The banks of Bordeaux and Nantes were at first disposed strenuously to resist the project for their incorporation with the Bank of France. In the end, however, they gave way; and, in consequence, 6150 shares, and an additional capital of 6,150,000 fr. was added to the shares and capital of the Bank of France, making at present (1853) the former 91,250, and the latter 91,250,000 fr. The maximum circulation of the bank was at the same time increased from 350,000,000 to 452,000,000 fr.

On the whole, we are inclined to think that this conversion of the departmental banks into branches of the Bank of France is a considerable improvement. It gives an equality of value to the paper currency, which it could not otherwise have had, and makes it equally serviceable in all parts of the country. It is surprising, indeed, how soon the Bank of France recovered from the severe shocks to which she was exposed in 1848, and to what a degree she has regained the public confidence. But despite the able management of the bank, her intimate connection with the government makes her stability in a great degree dependent on that of the latter.

A decree of the 3d March, 1852, has prolonged the charter of the bank till 1867, and has authorized her to make advances on railway stock and on the bonds of the city of Paris. The issue of notes for 50 fr. and 25 fr. would, we incline to think, be a great improvement.

There has been, within the last three or four years, a great accumulation of bullion in the coffers of the bank. Recently, however, it has been diminished, notwithstanding a rise in the rate of interest. (Seneuil, Traité de Banque, pp. 196-224, 2d ed., etc.) No bills are discounted that have more than three months to run. The bank is obliged to open a compte courant for every one who requires it, and performs services for those who have such accounts similar to those rendered by the private banks of London to their customers. She is not allowed to charge any commission upon current accounts, so that her only remuneration arises out of the use of the money placed in her hands by the individuals whose payments she makes. This branch of the business is said not to be profitable. The bank advances money on pledges of different kinds, such as foreign coin or bullion, government or other securities, etc. It also undertakes the care of valuable articles, as plate, jewels, title deeds, etc. The charge is  $\frac{1}{2}$  per cent of the value of each deposit, for every period of six months or under.

The administration of the bank is vested in a council-general of 20 members, namely, a governor and deputy governor, nominated by the emperor; and 15 directors and 3 censors, chosen by the general body of the shareholders. The bank has a large surplus capital, and at

present enjoys a high degree of credit.

Banks have also been established in Berlin, Copenhagen, Vienna, and Petersburg. Those who wish for detailed information with respect to these establishments may consult the 4th vol. of the Cours d'Economie Politique of M. Storch, which contains a good account of the paper money of the different Continental states down to 1823. We beg, also, to refer to the Supplement to this work. But in the mean time we lay before our readers the following details with respect to the Commercial Bank of Russia, established in 1818:

This bank receives deposits in gold and silver, foreign as well as Russian coin, and in bars and ingots. It has a department for transferring the sums deposited with it, on the plan of the Hamburg Bank. It discounts bills, and lends money on deposits of merchandise of Russian produce or origin. Its capital consists of 8,571,429 silver rubles. It is administered by a governor and four directors, appointed by government: and four directors, elected by the commercial body of Petersburg. The property in the bank is protected against all taxation, sequestration, or attachment; and it is enacted, that subjects of countries with which Russia may be at war shall be entitled at all times to receive back their deposits without any reservation. It is also declared, that at no time shall the bank be called upon for any part of its capital to assist the government. All deposits must be made for six months at least, and be repayable at or before that period, and not be less than 500 paper rubles: sums so deposited to pay 1 per cent. The deposits, if in bars, ingots, or foreign specie, are estimated in Russian silver coin, and so registered in the attestation; and if not demanded back within 15 days of the expiration of six months, or the necessary premium paid for the prolongation, the owner loses the right of claiming his original deposit, and must take its estimated value in Russian silver coin. No bills are discounted that have less than eight days or more than six months to run. The rate of discount is six per cent. No interest is allowed on money deposited in the bank, unless notice be given that it will be allowed to lie for a year, and three months' notice be given of the intention to draw it out, when six per cent interest is allowed. The bank has branches at Archangel, Moscow, Odessa, Riga, etc.

By means of its capital and deposits, which in 1839 amounted together to 161,881,839 silver rubles, the bank effected in that year the following operations:

|    |   | Rbls.      | Cop.      |
|----|---|------------|-----------|
| 1. | Repayments on deposits in transfer            | 24,966,101 | <b>45</b> |
| 2. | Transfers from one city to another            | 19,986,313 | 96        |
| 3. | Drafts purchased                              | 3,332,661  | 64        |
| 4. | Repayment of deposits at interest             | 31,925,776 | 91        |
| 5. | Discount of bills of exchange                 | 17,217,541 | 7         |
| 6. | Advances on deposits of merchandise           | 1,348,604  | 68        |
| 7. | Advances on the notes of other banks          | 650,001    | 13        |
| 8. | Discount of notes of the Lombard              | 1,928,571  | 43        |
| 9. | Advanced on fixed property by branch at Kieff | 174,070    | 80        |

The net profit during the same year amounted to 656,501 silver rubles, and the reserve capital of the bank was then also 1,279,976 silver rubles. (See Supp. to the Journal de St. Petersbourg for 1839, p. 87.)

#### II. THE BANKS OF IRELAND.

"In no country, perhaps," says Sir Henry Parnell, "has the issuing of paper money been carried to such an injurious excess as in Ireland. A national bank was established in 1783, with similar privileges to those of the Bank of England, in respect to the restriction of more than six partners in a bank; and the injury that Ireland has sustained from the repeated failure of banks may be mainly attributed to this defective regulation. Had the trade of banking been left as free in Ireland as it is in Scotland, the want of paper money that would have arisen with the progress of trade would, in all probability, have been supplied by joint-stock companies, supported with large capitals, and governed by wise and effectual rules.

"In 1797, when the Bank of England suspended its payments, the same privilege was extended to Ireland; and after this period the issues of the Bank of Ireland were rapidly increased. In 1797, the amount of the notes of the Bank of Ireland in circulation was 621,917L; in 1810, 2,266,471L, and in 1814, 2,986,999L

"These increased issues led to corresponding increased issues by the private banks, of which the number was 50 in the year 1804. The consequence of this increase of paper was a great depreciation of it; the price of bullion and guineas rose to 10 per cent above the mint price, and the exchange with London became as high as 18 per cent, the par being 8½. This unfavorable exchange was afterwards corrected, not by any reduction in the issues of the Bank of Ireland, but by the depreciation of the British currency in the year 1810, when the exchange between London and Dublin settled again at about par.

"The loss that Ireland has sustained by the failure of banks may be described in a few words. It appears by the Report of the Committee

•

on Irish Exchanges in 1804, that there were at that time in Ireland 50 registered banks. Since that year a great many more have been established; but the whole have failed, one after the other, involving the country from time to time in immense distress, with the following exceptions:—first, a few that withdrew from business; secondly, four banks in Dublin; thirdly, three at Belfast; and, lastly, one at Mallow. These eight banks, with the New Provincial Bank, and the Bank of Ireland, are the only banks now existing in Ireland.

"In 1821, in consequence of 11 banks having failed nearly at the same time in the preceding year in the south of Ireland, government succeeded in making an arrangement with the Bank of Ireland by which joint-stock companies were allowed to be established at a distance of 50 miles (Irish) from Dublin, and the bank was permitted to increase its capital 500,000l. The act of 1 & 2 Geo. 4. c. 72 was founded on

this agreement.

"But ministers having omitted to repeal in this act various restrictions on the trade of banking that had been imposed by 33 Geo. 2. c. 14, no new company was formed. In 1824 a party of merchants of Belfast, wishing to establish a joint-stock company, petitioned parliament for the repeal of this act of Geo. 2, and an act was accordingly passed in that session repealing some of the most objectionable restric-

tions of it (the 5 Geo. 4. c. 73).

"In consequence of this act the Northern Bank of Belfast was converted into a joint-stock company, with a capital of 500,0007., and commenced business on the 1st of January, 1825. But the remaining restrictions of 33 Geo. 2, and certain provisions contained in the new acts of 1 & 2 Geo. 3, and 5 Geo. 4, obstructed the progress of this company, and they found it necessary to apply to government to remove them; and a bill was accordingly introduced which would have repealed all the obnoxious clauses of the 33 Geo. 2, had it not been so altered in the committee as to leave several of them in force. In 1825 the Provincial Bank of Ireland commenced business, with a capital of 2,000,000l.; and the Bank of Ireland has of late established branches in all the principal towns in Ireland.

"The losses that have been sustained in Ireland by abusing the power of issuing paper have been so great, that much more is necessary to be done, by way of protecting the public from future loss, than the measure proposed last session (1826) by ministers, of abolishing small notes, and the measure already adopted, of allowing joint-stock companies to be established in the interior of the country. As the main source of the evil consists in the interference of the law in creating a national bank with exclusive privileges, the first step that ought to be taken for introducing a good system into Ireland is the getting rid of such a bank, and opening the trade of banking in Dublin. The next measure should be the requiring of each bank to give security for the amount of paper that is issued; for after the experience of the ignorance with which the Irish banks have conducted their business, and the derangement of the natural course of the trade by the long existence of the Bank of Ireland, it would be unwise to calculate upon a sound system of banking speedily supplanting that which has been

"Under the circumstances in which Ireland is placed, nothing would so much contribute to her rapid improvement in wealth as the introducing of the Scotch plan of cash credits, and of paying interest on deposits. By cash credits the capital which now exists would be rendered more efficient, and the paying of interest on small deposits would lead to habits of economy, and to the more rapid accumulation of new capital."—(Observations on Paper Money, etc., by Sir Henry Parnell, pp. 171-177.)

The capital of the Bank of Ireland at its establishment in 1783 amounted to 600,000l, but it has been increased at various periods, and has, since 1821, amounted to 3,000,0001. The Bank of Ireland draws on London at 10 days' date. She neither grants cash credits, nor allows any interest on deposits. She discounts at the rate of 5l.

In 1828 the currency of Ireland was assimilated to that of Great Britain. Previously to that period the currency of the former was 81 per cent less valuable than that of the latter.

Excess of Assets over Liabilities, £1,122,400, exclusive of the capital of the Bank.

Provincial Bank of Ireland.—This important establishment was, as already stated, founded in 1825. Its subscribed capital consists of 2,000,000l., divided into 20,000 shares of 100l. each, of which 25 per cent, or 500,000l., has been paid up. Its head office is in Dublin; and at present it has subordinate offices in Cork, Limerick, Clonmel, Londonderry, Sligo, Wexford, Waterford, Belfast, Galway, Armagh, Athlone, Coleraine, Kilkenny, Ballina, Tralee, Youghall, Enniskillen.

Monaghan, Banbridge, and Ballymena. The last five have been opened since 1831. The entire management of the establishment is vested in the court of directors in London. The business of the branch banks is conducted, under the control of the head office, by the managers, with the advice and assistance of two or more gentlemen of respectability in the district, each holding 10 shares in the bank. The business consists of discounting bills; granting cash credits after the manner of the Scotch banks; receiving deposits, on which interest, varying according to circumstances, is allowed; in drawing and giving letters of credit on other places of Ireland, Great Britain, etc.; and of other details incident to banking. It has had several pretty severe runs to sustain. In the course of a single week, in October, 1828, about 1,000,000l. in gold was sent from England to Ireland on account of the Provincial Bank! This prompt and ample supply effectually maintained the credit of the establishment, and did much to restore confidence.

The notes of the Provincial Bank have always been payable at the places where they are issued. The Bank of Ireland began to establish branches in 1825; but the notes issued by her branches were not, at first, payable except at the head office in Dublin. This distinction, which tended to throw the principal pressure of runs in the country on the Provincial Bank and other private companies, was abolished by the act 9 Geo. 4. Several joint-stock banks have been established in Ireland since 1825, especially in 1836. But the greatest of these, the Agricultural and Commercial Bank, which had nearly 4000 partners and 28 branches, was in no long time obliged to suspend payments, and is now in the course of having its affairs wound up. Some of the others have also been abandoned. There are comparatively few private banks in Ireland.

The provisions of the act 8 & 9 Vict. c. 37, with regard to banking in Ireland, do not differ materially from those in the preceding act relating to Scotland. The prohibition that formerly existed against joint-stock banks carrying on business in Dublin or anywhere within 50 miles thereof is repealed; the charter of the Bank of Ireland is prolonged till January, 1855, when it may be dissolved on notice; notes of the Bank of England are declared not to be legal tender in Ireland; and notes for less than 20s. are not to be negotiable.

## III. THE BANKS OF SCOTLAND.

The act of 1708, preventing more than six individuals from entering into a partnership for carrying on the business of banking, did not extend to Scotland. In consequence of this exemption, several banking companies, with numerous bodies of partners, have always existed in that part of the empire.

Bank of Scotland.—This institution was projected by Mr. John Holland, merchant, of London, and was established by act of the Scotch parliament (Will. 3. Parl. 1. § 5) in 1695, by the name of the Governor and Company of the Bank of Scotland. Its original capital was 1,200,000l. Scotch, or 100,000l. sterling, distributed in shares of 1000l.

Scotch, or 831. 6s. 8d. sterling, each. The act exempted the capital of the bank from all public burdens, and gave it the exclusive privilege of banking in Scotland for 21 years. The objects for which the bank was instituted, and its mode of management, were intended to be, and have been, in most respects, similar to those of the Bank of England. The responsibility of the shareholders is limited to the amount of their shares.

The capital of the bank was increased to 200,000l. in 1744, and was enlarged by subsequent acts of parliament, the last of which (44 Geo. 3. c. 23) was passed in 1804, to 1,500,000l., its present amount. Of this sum, 1,000,000l. has been paid up. The last-mentioned act directed that all sums relating to the affairs of the bank should henceforth be rated in sterling money; that the former mode of dividing bank-stock by shares should be discontinued; and that, for the future, it should be transferred in any sums or parcels. On the union of the two kingdoms in 1707, the Bank of Scotland undertook the recoinage, effected the exchange of the currency in Scotland: it was also the organ of government in the issue of new silver coinage in 1817.

The Bank of Scotland is the only Scotch bank constituted by act of parliament. It began to establish branches in 1696, and issued notes for 1l. so early as 1704. The bank also began, at a very early period, to receive deposits on interest, and to grant credit on cash accounts; a minute of the directors with respect to the mode of keeping the latter being dated so far back as 1729. It is, therefore, entitled to the credit of having introduced and set on foot the distinctive principles of the Scotch banking system, which, whatever may be its defects, is probably superior to every other system hitherto established. Generally speaking, the Bank of Scotland has always been conducted on sound and liberal principles; nor can there be a doubt that it has been productive, both directly and as an example to other banking establishments, of much public utility and advantage.

It may be worth mentioning, that the act of Will. 3, establishing the Bank of Scotland, declared that all foreigners who became partners in the Bank should, by doing so, become, to all intents and purposes, naturalized Scotchmen. After being for a long time forgotten, this clause was taken advantage of in 1818, when several aliens acquired property in the bank in order to secure the benefit of naturalization. But after being suspended, the privilege was finally cancelled in 1822.

We subjoin an official abstract of the constitution and objects of the Bank of Scotland, printed for the use of the proprietors;—the terms and mode of transacting business are, of course, sometimes altered, according to circumstances.

I. The Bank of Scotland is a public national establishment; erected and regulated by the legislature alone: and expressly as a public bank in this kingdom; for the benefit of the nation, and for the advancement of agriculture, commerce, and manufactures; and for other objects of public policy.—(Will. Parl. 1. § 5; 14 Geo. 3. c. 32; 24 Geo. 3. c. 8; 32 Geo. 3. c. 25; 34 Geo. 3. c. 19; 44 Geo. 3. c. 23.)

II. The statutory capital is at present 1,500,000*l* sterling. It is raised by voluntary subscription; and has been subscribed for. 1,000,000*l* has been called for, and paid in.—(44 Geo. 3. c. 23.)

III. Subscribers, if not under obligation to the Bank, may, at pleasure, transfer

.

their right. If under obligation to the Bank, the obligation must be previously liquidated; or the proceeds of the sale, at a price to the satisfaction of the directors, must be applied towards such liquidation. Transfers are made by a short assignment and acceptance thereof, both in a register appointed for that purpose. The expense, beside the government stamp, is 11s.—(Will. Parl. 1. § 5.)

IV. Bank of Scotland stock may be acquired, in any portions, by any person, community, or other lawful party whatsoever; without selection, exclusion, or limitation of numbers.—(Wdl. Parl. 1. § 5; 44 Geo. 3. c. 23.)

V. Bank of Scotland stock may be conveyed by will, and, if specially mentioned, without expense of confirmation. It cannot be arrested: the holder's right may be adjudged. Dividends may be arrested.—(Will. Parl. 1. § 5.)

VI. The Bank of Scotland is a public corporation by act of parliament. The Bank's transactions are distinct from those of the stockholders; and theirs from

those of the Bank.—(Will Parl. 1. § 5.)

VII. The establishment is expressly debarred from any other business than that

of banking.—(Will. Parl. 1. § 5.)

VIII. The management is vested, by statute, in a governor, deputy governor, twelve ordinary, and twelve extraordinary directors. They are chosen annually, on the last Tuesday of March, by the stockholders having 250% of stock or upwards. Those above 250l have a vote for every 250l, to 5000l, or 20 votes. No person can have more than 20 votes. The governor must hold at least 2000l of stock; the deputy governor 1500l; and each director 750l. They swear to be equal to all persons; and cannot hold any inferior office in the Bank.—(Will. Parl. 1. § 5;

14 Geo. 3. c. 32; 44 Geo. 3. c. 23.)

IX. The executive part is conducted by a treasurer, secretary, and other public officers, all sworn. (Will. Parl. 1. § 5.) Those having the official charge of cash find due security.-

X. The board of directors sits for the general administration of the Bank, at the Bank's Public Head Office in Edinburgh. The local business of that district is also conducted at that office. For the local business in the other parts of the kingdom, the Bank has its regular public offices in the principal towns. At each of these offices there is the bank agent or cashier, who gives due security, and conducts the Bank's business for that district in the manner after mentioned. There is also the bank's accountant for that office; who is appointed by the directors.—(Will Parl.

XI. The Bank takes in money at all its public offices, on deposit receipts or promissory notes, or on current deposit account.\* At the head office, draughts on London or on any of the agencies, are given; at each agency, draughts on London, or on the Head Office, are given. All these documents are on the Bank's check (and sealed with the Bank's seal †). They beer, in words, to be "For the Bank of Scotland;" or, "For the Governor and Company of the Bank of Scotland." documents are signed, if at Edinburgh, by the treasurer, and countersigned by the principal accountant: if at an agency, they must be signed by the Bank's agent as agent, and countersigned by the Bank's accountant for that agency; otherwise they infer no obligation on the Bank.—(Resolution of Court, 28th Feb., 1793.)

XII. Bills on London, Edinburgh, or any town where the Bank has its official correspondents, are discounted and purchased at all the Bank's public offices. The Bank's agents judge, in ordinary cases, of the bills presented; so that parties meet The Bank does not sell, at any of its offices, the bills which it has with no delay. discounted and purchased. Its agents cannot indorse its bills unless officially to

the trensurer.—(Resolution of Courl, 23d Feb., 1799.)

XIII. Government stock and other public funds, transferable in London, may be purchased or sold, and dividends thereon may be received through the Bank.

XIV. The bank gives credit on cash accounts at any of its offices, on bond, with The security may be personal coöbligants, conjunctly and severally; or Bank of Scotland stock; or both: or such other security as may be specially

<sup>\*</sup> The Bank has always allowed interest on deposits. The rate allowed varies, of course, with the variations in the market rate. During the greater part of the late war it was as high as 4 per cent; but at present (January, 1847) it is only 3 per cent. † The seal is now dispensed with, except on the Bank's notes.

agreed on. Applications for cash accounts are given in to the office where the cash account is wanted, and must specify the credit desire, and the security proposed; and the individual partners, where copartneries are proposed. Cash accounts are granted by the directors only; and are not recalled unless by their special authority. It is understood that these credits are not used as dead loans, to produce interest only. In the fair course of business, the advantage of the Bank is consulted by an active circulation of its notes, and by frequent repayments to it in a way least affecting that circulation.—(Resolution of Court, 6th Nov., 1729, and 23d Feb., 1789.)

XV. The Bank's dividend of profits has been for some considerable period 6 per

XV. The Bank's dividend of profits has been for some considerable period 6 per cent per annum, on its paid-up capital of 1,000,000*l*. sterling. The dividends are paid regularly twice a year, without expense. They may be drawn either at the Bank's Head Office, or at any of its other offices, as most agreeable to the stock-

holder.

Most of the other Scotch banks are conducted on the same principles and in the same way as the Bank of Scotland, so that the details as to its management will nearly apply to them all.

The Royal Bank of Scotland was established in 1727. Its original

capital of 151,000l. has been increased to 2,000,000l.

The British Linen Company was incorporated in 1746, for the purpose, as its name implies, of undertaking the manufacture of linen. But the views in which it originated were speedily abandoned; and it became a banking company only. Its capital amounts to 500,000l.

None of the other banking companies established in Scotland are chartered associations, with limited responsibility; the partners being jointly and individually liable, to the whole extent of their fortunes, for the debts of the firms. Some of them, such as the National Bank, the Commercial Banking Company, the Dundee Commercial Bank, the Perth Banking Company, etc., have very numerous bodies of partners. Their affairs are uniformly conducted by a Board of Directors annually chosen by the shareholders.

The Bank of Scotland began, as already stated, to issue 1l. notes so early as 1704; and their issue has since been continued without interruption. "In Scotland," to use the statement given in the Report of the Committee of the House of Commons of 1826 on the Promissory Notes of Scotland and Ireland, "the issue of promissory notes payable to the bearer on demand, for a sum of not less than 20s., has been at all times permitted by law; nor has any act been passed limiting the period for which such issue shall continue legal in that country. In England, the issue of promissory notes for a less sum than 5l. was prohibited by law from the year 1777 to the epoch of the Bank Restriction in 1797. It has been permitted since 1797; and the permission will cease, as the law at present stands, in April, 1829."

There have been comparatively few bankruptcies among the Scotch banks. In 1793 and 1825, when so many of the English provincial banks were swept off, there was not a single establishment in Scotland that gave way. This superior stability seems to be ascribable partly to the formation of so many banks with numerous bodies of partners, which tends to prevent any company with only a few partners, unless they are known to possess considerable fortunes, from getting paper into circulation; partly to the less risk attending the business of banking in Scotland; and partly to the facility afforded by the law of Scot-

land of attaching a debtor's property, whether it consist of land or movables, and making it available to the payment of his debts.

In the Report already quoted, the last-mentioned topic is touched upon as follows: "The general provisions of the law of Scotland bearing upon this subject are calculated to promote the solidity of banking establishments, by affording to the creditor great facilities of ascertaining the pecuniary circumstances of individual partners, and by making the private fortunes of those partners available for the discharge of the obligations of the bank with which they are connected. There is no limitation upon the number of partners of which a banking company in Scotland may consist; and, excepting in the case of the Bank of Scotland and the two chartered banks, which have very considerable capitals, the partners of all banking companies are bound jointly and severally, so that each partner is liable, to the whole extent of his fortune, for the whole debts of the company. A creditor in Scotland is empowered to attach the real and heritable, as well as the personal estate of his debtor, for payment of personal debts, among which may be classed debts due by bills and promissory notes; and recourse may be had, for the purpose of procuring payment, to each description of property at the same time. Execution is not confined to the real property of a debtor merely during his life, but proceeds with equal effect upon that property after his decease.

"The law relating to the establishment of records gives ready means of procuring information with respect to the real and heritable estate of which any person in Scotland may be possessed. No purchase of an estate in that country is secure until the seisine (that is, the instrument certifying that actual delivery has been given) is put on record, nor is any mortgage effectual until the deed is in like manner recorded.

"In the case of conflicting pecuniary claims upon real property, the preference is not regulated by the date of the transaction, but by the date of its record. These records are accessible to all persons; and thus the public can with ease ascertain the effective means which a banking company possesses of discharging its obligations; and the partners in that company are enabled to determine, with tolerable accuracy, the degree of risk and responsibility to which the private property of each is exposed."

Deposits.—As was previously observed, all the Scotch banks receive deposits of so low a value as 10*l*., and sometimes lower, and allow

interest upon them.

"The interest," says the committee, "allowed by the Bank upon deposits varies from time to time, according to the current rate of interest which money generally bears. At present (1826) the interest allowed upon deposits is 4 per cent." (At this moment (1846) the interest allowed on deposits is 3 per cent.) "It has been calculated that the aggregate amount of the sums deposited with the Scotch banks amounts to about 20,000,000l. or 21,000,000l." (It is believed to be now (1846) little, if any thing, under 28,000,000l. or 30,000,000l.) "The precise accuracy of such an estimate cannot of course be relied on. The witness by whom it was made thought that the amount of deposits could not be less than 16,000,000l., nor exceed 25,000,000l.

and took an intermediate sum as the probable amount. Another witness, connected for many years with different banks in Scotland, and who has had experience of their concerns at Stirling, Edinburgh, Perth, Aberdeen, and Glasgow, stated that more than one half of the deposits in the banks with which he had been connected were in sums from ten pounds to two hundred pounds. Being asked what class of the community it is that makes the small deposits, he gave the following answer; from which it appears that the mode of conducting this branch of the banking business in Scotland has long given to that country many of the benefits derivable from the establishment of sav

ings banks.

"Question.—What class of the community is it that makes the smallest deposits? Answer.—They are generally the laboring classes in towns like Glasgow: in country places like Perth and Aberdeen, it is from servants and fishermen, and that class of the community who save small sums from their earnings till they come to be a bank deposit. There is now a facility for their placing money in the Provident Banks, which receive money till the deposit amounts to 10l. When it comes to 10l. it is equal to the minimum of a bank deposit. The system of banking in Scotland is an extension of the Provident Bank system. Half-yearly or yearly those depositors come to the bank, and add the savings of their labor, with the interest that has accrued upon the deposits from the previous half-year or year, to the principal; and in this way it goes on, without being at all reduced, accumulating (at compound interest) till the depositor is able either to buy or build a house, when it comes to be 100l., or 200l., or 300l., or till he is able to commence business as a master in the line in which he has hitherto been a servant. A great part of the depositors of the bank are of that description, and a great part of the most thriving of our farmers and manufacturers have arisen from such beginnings.

Cash Accounts or Credits.—The loans or advances made by the Scotch banks are either in the shape of discounts, or upon cash credits,

or, as they are more commonly termed, cash accounts.

This species of account does not differ in principle from an overdrawing account at a private banker's in England. A cash credit is a credit given to an individual by a banking company for a limited sum, seldom under 100l. or 200l., upon his own security, and that of two or three individuals approved by the bank, who become sureties for its payment. The individual who has obtained such a credit is enabled to draw the whole sum, or any part of it, when he pleases, replacing it, or portions of it, according as he finds it convenient; interest being charged upon such part only as he draws out. "If a man borrows 50001. from a private hand, besides that it is not always to be found when required, he pays interest for it whether he be using it or not. His bank credit costs him nothing, except during the moment it is of service to him, and this circumstance is of equal advantage as if he had borrowed money at a much lower rate of interest."—(Hume's Essay on the Balance of Trade.) This, then, is plainly one of the most commodious forms in which advances can be made. Cash credits are not, however, intended to be a dead loan; the main object of the banks in

granting them is to get their notes circulated, and they do not grant them except to persons in business, or to those who are frequently drawing out and paying in money.

The system of cash credits has been very well described in the Report of the Lords' Committee of 1826 on Scotch and Irish Banking. "There is also," say their lordships, "one part of their system, which is stated by all the witnesses (and, in the opinion of the committee, very justly stated) to have had the best effects upon the people of Scotland, and particularly upon the middling and poorer classes of society, in producing and encouraging habits of frugality and industry. The practice referred to is that of cash credits. Any person who applies to a bank for a cash credit is called upon to produce two or more competent sureties, who are jointly bound; and, after a full inquiry into the character of the applicant, the nature of his business, and the sufficiency of his securities, he is allowed to open a credit, and to draw upon the bank for the whole of its amount, or for such part as his daily transactions may require. To the credit of the account he pays in such sums as he may not have occasion to use, and interest is charged or credited upon the daily balance, as the case may be. From the facility which these cash credits give to all the small transactions of the country, and from the opportunities which they afford to persons who begin business with little or no capital but their character, to employ profitably the minutest products of their industry, it cannot be doubted that the most important advantages are derived to the whole The advantage to the banks who give these cash credits community. arises from the call which they continually produce for the issue of their paper, and from the opportunity which they afford for the profitable employment of part of their deposits. The banks are indeed so sensible that, in order to make this part of their business advantageous and secure, it is necessary that their cash credits should (as they express it) be frequently operated upon, that they refuse to continue them unless this implied condition be fulfilled. The total amount of their cash credits is stated by one witness to be 5,000,000l., of which the average amount advanced by the banks may be one third.

The expense of a bond for a cash credit of 500l. is 4l. stamp duty, and a charge of from 5s. to 10s. 6d. per cent for filling it up.

# IV. LA SOCIÉTÉ DE CREDIT MOBILIER-PARIS.

Very great misapprehension prevails, and very unnecessary alarm has been excited, as to the real character of some of the modern banking establishments in Paris—especially those of the Credit Mobilier, the Credit Foncier, and the Credit Maritime. These erroneous impressions have been caused mainly by those establishments being, according to the acceptance of the term in this country, erroneously called banks. Banks in England are establishments which have little capital compared to the extent of their obligations. The chief funds with which they trade are composed of deposits, and in the case of banks of issue of notes in circulation. For example, the deposits of the five joint-stock banks in London amount alone to more than

29,000,000l., while their actual capital paid up is only 2,966,332l.: that is, the capital is equal only to ten per cent of the liabilities for money in deposit with them. And whether the liabilities of such banks consist only of deposits or of deposits and notes in circulation, as a rule the whole are payable on demand. It is, therefore, obvious that establishments having such enormous obligations payable on demand at any moment, cannot, without being guilty of the greatest imprudence, lock up their means in mortgages, or any other investment of a permanent character, but must confine themselves to securities which can be easily converted at all times, such as Exchequer bills, public funds, and in the discount of commercial bills of a moderate date, which are daily falling due, and furnishing the means of paying any demand that may arise. The ruin which spread among our country banks in 1825 was chiefly owing to the neglect of this plain rule: they had largely invested their means in landed securities, and when a run came upon them, they had no means of immediately converting them. Many of the colonial banks have been ruined from a similar cause-namely, making extensive advances upon plantations and other real property. At last it has become a settled canon in banking, that the only securities which ought to be taken are such as by their nature are at once and at all times marketable and convertible, though it may be at a

When, therefore, we heard of banks with large capitals and authorized to contract huge obligations for the purpose of making advances upon land for its improvement, upon merchandise abroad and at home, and to lock up their funds in shares of railways and other joint-stock companies as proprietors, we were naturally disposed to shudder for the consequences of any unusual pressure which might lead to the discredit of such establishments; and this alarm has been increased when we have known that the capital of a single establishment consisted of 60,000,000 fr., (2,400,000 l.,) and that it was empowered to contract obligations by borrowing to the extent of no less than 24,000,000 l.

These establishments are, however, in their real character entirely different from English banks, and their obligations are of a nature so essentially opposite, that what English banks could not do, without great danger, these banks may do not only with impunity but beneficially. In place of trading upon means which are payable on demand, like the English banks, these particular establishments in Paris trade only upon capital paid up, and upon money borrowed upon bonds or "obligations," which are repayable only over a period of ninety years. For example, the Credit Mobilier has a capital of 60,000,000 fr.

For example, the Credit Mobilier has a capital of 60,000,000 fr. (2,400,000l.) actually paid up. It has the power to issue bonds or obligations to the extent of ten times the capital, or 24,000,000l., repayable by means of an annual sinking fund in ninety years, with interest. Such an establishment may be well or ill managed, it may be successful or the reverse, its proprietors may make or lose money, and those who hold the bonds may, in the event of ill-success, find that there is not enough to meet their demands finally; but there can be no sudden run or demand made upon it for the repayment of the obligations it has incurred. If it provide for the interest of the bonds

and the small annual sinking fund, its obligations are fulfilled, and its creditors at no time can ask more. In point of fact, therefore, unlike those banks which hold deposits and circulate notes, these establishments have nothing to apprehend of inconvenience from any sudden pressure upon the money market. It is plain, therefore, that the same rule does not apply as to the selection of their securities. They may lock up their capital and borrowed money in any description of security or undertaking, provided only it gives a good annual return, so as to enable them to pay their interest, dividend, and sinking fund. In the case, however, of the *Credit Mobilier*, although the whole of the capital has been paid up, the managers have not as yet exercised their power of issuing obligations to any extent whatever. They recently intended to do so, but in consequence of the pressure upon the money market they relinquished the design. At present, therefore, they trade only upon their actually paid-up capital.

Again, the Credit Foncier is of the nature of a land bank, or a land drainage company. It has a capital of 30,000,000 fr., (1,200,000l.,) of which 600,000l. is paid up. The directors have issued bonds or obligations, repayable by a sinking fund in a specified number of years. Their liabilities, also, are not of a nature payable on demand, and, therefore, they can with safety lend their funds to the land-owner and others for permanent improvements, so long as the security is good, and they receive upon the principal of the drainage loans annual pay-

ments equal to the interest and sinking fund.

It will thus be seen that the establishments of which so much has been said, and about which so much apprehension has been felt in the event of a panic, are of a character which makes them independent of monetary pressure. No doubt there is a great scope for good or bad management, for losses or for gains; the proprietors may find their shares at a discount or at a premium, as their funds are ill or well invested, and the bondholders may find that they hold good or bad securities, as the money lent is profitably employed or otherwise: all these risks attend those like all other trading concerns, but they are free of the peculiar risk of banks of issue and deposit, which renders it incumbent upon them to limit their investments to securities which are immediately convertible.

The great danger of such banks as those of the Credit Mobilier and Credit Maritime is, that by embarking large capitals in new undertakings they stimulate speculation unduly, give rise to companies and to transactions which the legitimate wants of the country do not require, and thus, although they may not ultimately lose themselves, they are indirectly the cause of great losses to others, and of such an artificial and momentary expansion of trade as to promote monetary and financial embarrassment; and there can be no doubt that such has been the case to a considerable extent in Paris in the present year, the fruits of which they are now reaping. There can be no doubt that in order to secure the permanent success of such institutions, as well as the advantages which they are calculated to confer, they must be managed with greater care and circumspection than are ordinarily found in the directors of joint-stock companies.

# V. THE AUSTRIAN BANK DU CREDIT MOBILIER. From the London Illustrated News.

The financial project with which Baron Bruck has been engaged for the last few weeks, and which has just resulted in a contract with the house of Rothschild, has greatly occupied the attention of diplomatists and the press. The object was to establish in Austria a Mortgage Bank on the principle of the Credit Mobilier in Paris. M. Pereira, of that establishment, went to Vienna to consult with the Austrian Minister. It was reported at the commencement of the present month that Baron Bruck, having found it impossible to induce that gentleman or any other financier to advance the necessary funds, had tendered his resignation to the Emperor; but subsequent information proved the rumor to be unfounded. Though M. Bruck came to a preliminary understanding with M. Pereira on the subject of the statutes of the proposed bank, the question as to the amount of capital remained unsettled. Perhaps some other matters were also in dispute; but, however this may be, the negotiations were ultimately broken off, and the Vienna branch of the great house of Rothschild & Co., after consultation with Baron James Rothschild, of Paris, is understood to have taken the contract, and M. Pereira has left Vienna. On the morning of the 8th instant Baron Bruck proceeded to Ischl, the summer and autumnal residence of the Emperor of Austria, and submitted to his Majesty the propositions of the house of Rothschild. The Times' correspondent at Vienna, writing on the 12th inst., says: "It is a settled matter that a Credit Mobilier will be established in Austria, but it will not take the French establishment which bears that name as its model. On his return from Ischl, Baron Bruck will bring with him the sanction of the Emperor to one or other of the propositions which have been made. The house of Rothschild is believed to have the best chance of success. It is whispered that the French Credit Mobilier has agreed to take the Italian railroads off the hands of the Austrian government. The Credit Foncier, or Hypotheque Bank, will be entirely in the hands of this bank, which is to manipulate with a capital of 20,000,000 silver florins. The plan may be a good one, but the landed proprietors of half-a-dozen of the Hungarian 'comitats' would require the whole 20,000,000, if they were resolved to put their affairs in order."

These anticipations have been confirmed, for we learn by a dispatch from Vienna, that the house of Rothschild will establish an Austrian Bank of Credit Mobilier with a capital of 60,000,000 florins.

In 1822 or 1823, when the Greeks were in arms to assert their independence, a young man with a staff in his hand and a travelling-knapsack on his back presented himself at the office of a Greek merchant at Trieste, to whom he had a letter of introduction. Filled with youthful enthusiasm for the once glorious name of Greece, he was on his way to the Morea with the intention of joining the Greek insurgents, as Lord Byron did about the same time. The merchant, pleased with his appearance, and perhaps influenced by the letter of introduction, thought it a pity so much intelligence should be employ-

ed in warlike rather than in peaceful pursuits, and endeavored to dissuade him from his purpose. To give effect to his arguments he offered the adventurer a clerkship in his office. The offer was immediately accepted. The young man's name was Bruck. He doubtless devoted himself with much zeal to his patron's interests, for in a few years he became the head clerk and manager of the business. A courtship was shortly afterwards carried on between him and his patron's daughter, which ended in marriage and a partnership.

BARON BRUCK.

In addition to the private interests of his business, M. Liuck now devoted himself to public affairs, and more especially to the formation of an Austrian Steam Navigation Company—the few steamers which plied on the Adriatic being at this time almost exclusively in the hands of English speculators. He it was who established that well-known institution, the Austrian Lloyd's—for which he was indebted for a name to the commercial phraseology of England—and which he founded on principles similar to those by which the English Lloyd's is conducted. As railroads began to extend themselves in France and Germany, M. Bruck, anxious that his own country should not lag behind

the rest of the world in this respect, favored their introduction in Austria; and it is to his energy and public spirit that the world owes the remarkable railroad which is to connect Venice to Trieste, and which passes over the Styrian Alps at gradients which at one time would have alarmed the ablest engineers, and winds amongst some of the most beautiful scenery in Europe. This railway is at present completed from Vienna to Laibach. The remaining seventy miles, from Laibach to Trieste, through a dreary and difficult country, are in course of construction.

After the revolutionary disturbances of 1848, and the accession of the present Emperor, M. Bruck was called to the Ministry in the Department of Finance. In this department he has proved himself an able administrator, but has been, it is believed, the main obstacle to the warlike policy in favor of the Western Powers, which the circumstances of Europe, no less than of Austria herself, have dictated. Baron Bruck is said to be of opinion that if Austria had not concluded a treaty of alliance with the Western Powers she would have been able to come to an understanding with the Bund. "And such (says the Times' correspondent at Vienna) would doubtless have been the case; but then Austria would have been what Prussia and the rest of the German States now are—the secret ally of Russia. The Minister of Finance, who in a high degree enjoys the confidence of his Imperial master, has probably called his attention to the fact that by his policy in the Eastern question he has lost the influence which he formerly had over the second-rate German courts; and it must be confessed that, if he has done so, he has not misrepresented matters. It was, however, a question, whether Austria should adopt the policy of Prussia, Bavaria, Saxony, Wurtemberg, and other States, or whether those States should adopt that of Austria." "Baron Bruck (adds the same writer) seems to think that Austria would have done well to consent to play second fiddle in Germany; and there is reason to fear

that he has managed to convert persons of influence to his opinion."

A late letter from Vienna says: "Nothing is yet definitively settled in the Bank affair, but reliable information has been given me that it is proposed to extend the mortgage business of that institution far beyond its capital of 20,000,000 florins. Baron Bruck evidently intends to introduce the Prussian system into Austria. In the Prussian provinces are so-called 'credit banks' for advancing money on real property, and the proprietors of these institutions are at one and the same time debtors and creditors. The great landed proprietors in each Landschaft or district formed a kind of company or credit bank. and then had their estates valued by sworn surveyors. It was then settled that each landed proprietor might, if he pleased, mortgage his property at the credit bank of which he was a member for two thirds of its real value. The various credit banks have received from Government the privilege of issuing pfand-briefe, or mortgage-deeds, which are placed in the hands of the mortgagee, who, however, has nothing whatever to do with the proprietor of the estate on which he has advanced money. His debtor is the whole Landschaft or district, which collects the interest of the sums that have been advanced to the va-

rious landed proprietors, and forecloses the mortgage if the interest is not regularly paid up. If the mortgager contracts new debts, the Landschaft, as the holder of the mortgage-deeds (pfand-briefe) has precedence of all other creditors. The system has proved a good one in Prussia, but it remains to be seen whether it will be equally successful when transplanted to Austria. It is not yet settled what direction the Constantinople Railway is to take. The one line through Servia, by way of Philippopoli and Adrianople, presents very great difficulties; but the other, through the east of Bulgaria and Wallachia, up to the Austrian frontier, might easily be constructed. It need hardly be said that the latter would be most to the taste of this Government."

# RECAPITULATION OF SCOTCH BANKS.

# September 1, 1855.

The following return shows the circulation of the Scotch banks, and the average amount of coin held, during the four weeks ending the 1st September:

| Name and Tille as set forth in License. | (Groulation authorised. | Average<br>Circulation<br>in Notes. | Average<br>Gold and<br>Bilver Voin. |
|---|-------------------------|-------------------------------------|-------------------------------------|
| Bank of Scotland,                       | £300,485                | £375,184                            | £170,812                            |
| Royal Bank of Scotland,                 | . 183,000               | 185,562                             | 63,826                              |
| British Linen Company,                  | . 438,024               | 465,731                             | 208,735                             |
| Commercial Bank of Scotland,            | . 874,880               | 470,407                             | 160,613                             |
| National Bank of Scotland,              |                         | 335,288                             | 80,164                              |

| pany in Aberdeen,                       | . 415,690               | 514,781                             | 179,078                             |
| Edinburgh and Glasgow Bank,             | . 136,657               | 165,773                             | 52,948                              |
| Aberdeen Town and County Banking Com    | ·                       | •                                   | •                                   |
| pany,                                   | . 70,133                | 109,842                             | 46,243                              |
| North of Scotland Banking Company,      | . 154,319               | 198,604                             | 66,954                              |
| Dundee Banking Company,                 | . 33,451                | 38,122                              | 11,837                              |
| Eastern Bank of Scotland,               |                         | 38,684                              | 18,471                              |
| Western Bank of Scotland,               | . 337,938               | 515,102                             | 286,454                             |
| Clydesdale Banking Company,             | . 104,028               | 155,923                             | 82,016                              |
| City of Glasgow Bank,                   | . 72,921                | 213,463                             | 162,868                             |
| Caledonian Banking Company,             |                         | 72,913                              | 29,559                              |
| Perth Banking Company,                  |                         | 48,951                              | 18,174                              |
| Central Bank of Scotland,               |                         | 59,493                              | 24,772                              |

INDIAN RAILWAYS.—A prospectus has been issued of the Scinde Railway Company, with a capital of £750,000, in £20 shares. It is to run from Kurrachee, the only scaport of Scinde in communication with the Indus, to Hyderabad, and will be 110 miles in length. In addition to developing the resources of the province of Scinde, which have shown, from the date of annexation, a growth almost unexampled, it is asserted the line would save the Indian government at least £60,000 a year in the transport of stores, and by improvements which it might lead to in the Indus Flotilla service. Under these circumstances, the promoters have obtained a guarantee of 5 per cent, besides a lease of the necessary land, togethewith all the other advantageous conditions granted to the East-Indian and Great-Indian Peninsular lines, from the East-India Company.

# THE HISTORY OF COMMERCE.

#### From the Encyclopedia Britannica.

It has been an object with many writers to ascertain in what nation of antiquity commerce was first carried to a considerable extent; but as that extent implies a previous population, the more simple inquiry would be, in what country population first acquired density, particularly in towns. The answer is, that mankind first increased their numbers in warm latitudes, especially in situations where irrigation, whether effected by the overflowing of rivers, by the descent of streams from a range of mountains, or by any other means, was so extensive as to counteract the parching effect of heat, and give to vegetation a luxuriance unknown in colder regions. It was thus that the Nile gave fertility to Egypt, the Euphrates to Chaldea, and the Ganges, in the lower part of its course, to Bengal.

The earliest written notice of commercial intercourse is in Scripture, where we read of Joseph being sold by his brethren to a company of Ishmaelites or Arabs, who were going to Egypt with spices, balm, and myrrh, conveyed on the backs of camels. These itinerant traders probably brought back corn, Egypt being, even at that remote period, an occasional granary for Syria and other adjacent countries. The conveying of goods on the backs of animals ought to be remarked as indicative of a primitive state of commercial intercourse—of that which is carried on before the forming of roads or the use of wheelcarriages. Such was the case in England two centuries ago; such at present is the case in Spanish America, and, in some degree, in Old Spain, the mountainous nature of that country making it a matter of some difficulty to form roads.

But whatever might be the inland traffic of the Arabians, Chaldeans, or Egyptians, they made very little progress in navigation; that was the province of the Phœnicians, who acted as naval carriers to the neighboring nations, in the same way as the Dutch did during the sixteenth and seventeenth centuries to the rest of Europe. This almost exclusive possession of navigation may seem strange in the present age, but the cause was the same in both cases, namely, the difficulty in a rude age of finding men capable of conducting vessels in the open sea. Seamanship, now so familiar to the inhabitants of almost every port in Europe, was in those days understood by only a limited number, and was carried on with a degree of caution and slowness hardly credible to a modern reader. Thus the seamen of ancient times made it a rule to keep within sight of land, as if trusting for protection to a situation which the mariners of our days look on as attended with considerable risk. This arose from the great difference in the mode of propelling vessels, for which the moderns trust chiefly to the wind, and navigate with comparatively few hands. The small barks of the ancients were fitted out with oars; a method which required a great sacrifice of

manual labor, but was attended with the advantage of finding a ready shelter in a bay or creek whenever the sky portended tempestuous weather.

What, it may be asked, was the chief cause of the extension of the navigation of Phœnicia? The vicinity of Egypt, and the quantity of provisions and merchandise exported from that fertile country. The navigation of the Red Sea also was conducted chiefly by Phoenicians. History is not sufficiently explicit in regard to the commodities forming the object of traffic along the Red Sea, nor have we any certain knowledge of the era at which the trade with India by that channel commenced. Bonaparte, when meditating his expedition to Egypt, was led, in his sanguine estimate of its advantages, to consider the Red Sea as the fittest line of communication with India, and to ascribe the wealth of Thebes in Egypt, one of the earliest of commercial cities, to intercourse with the coast of Malabar. But whether the navigators of the Red Sea proceeded at that early date as far as the shores of India, it is evident that an extensive traffic was carried on with Cosseir, or a scaport on the Red Sea which communicated with Thebes. The epoch at which Homer celebrated the wealth of that city, is nearly the same as that at which Phoenician mariners navigated the Red Sea on account of the Jewish government in the reign of Solomon; but no historical investigator has been able to fix with certainty the situation of Ophir and Tarshish, the ports with which these vessels traded. Some confident calculators have considered them to have been in India; but, judging from the limited skill of navigators in that early age, it seems more likely that these harbors were near the eastern or more remote parts of the Red Sea, apart from which there probably was a direct communication with India.

Such was the traffic of the Phoenicians with the south and east; it extended also to countries less peopled and in a still more primitive state in the west. The island of Crete seems to have owed to them its early civilization; and after Crete came Attica, Bootia, the Peloponnesus, in all of which tradition recorded the early introduction of the arts by settlers arriving from Phoenicia or Egypt. These arrivals seem to have taken place about a thousand years before the Christian era, and half of that time elapsed in the gradual attainment of that state of civilization to which Greece had arrived at the period of har political celebrity—the invasion of her territory by the Persians under Darius and Xerxes.

Greece is in several respects well fitted for foreign commerce. Her coast is greatly indented by the sea, and presents a number of inlets hardly inferior to the well-known gulfs of Argos and Corinth. Hence an early familiarity with the use of shipping, and the practice of sending forth colonies at so early a date as a century after the Trojan war. These colonies proceeded in various directions, to Asia Minor in the east, to Thrace and the Euxine in the north, to Sicily and Italy in the west. The progress made by the inhabitants of these colonial settlements was rapid, particularly at Syracuse, whose capacious harbor soon acquired it extensive commerce and a numerous population. Agrigentum, Messina, Tarentum, were likewise places of considerable im-

portance. It was the custom of these and other colonies to maintain an alliance and mercantile connection with the parent states, such as Athens, Corinth, Argos; and a number of characters eminent in literature and the arts appeared in the colonies, at a time when their establishment might have been considered as too recent to afford more than the necessaries of life. But in a newly-settled country, such as the United States of America, various circumstances concur to increase the number and improve the condition of the inhabitants; provisions are abundant, in consequence of the extent of unoccupied land; the connection with the mother country insures a certain extent of trade; while the monopolies and other abuses natural to a long-settled com-

munity are in a manner unknown.

On the other hand, the inland territory of Greece was not well fitted for commercial intercourse. It is traversed by no navigable river; and, being mountainous and rugged, it could not, even in the days of its prosperity, boast of roads, merchandise being in those days, as at present, conveyed, not in carriages, but on the backs of horses and oxen. This deficiency of communication by land was one cause of the different states of Greece so long maintaining their independence, and of the limited ascendency attained by Lacedæmon, which, in extent of military means, was so superior to the other states of the Peloponnesus. Sparta and Thebes being island towns, and Corinth comparatively a small state, Athens was the chief commercial city of ancient Greece. Her distance from the sea, five miles, was such as to afford her security against a sudden descent from an invading armament, while it was sufficiently near to her harbor, the Peiræus, for the easy transmission of merchandise. The trade and shipping of Athens, however small it might appear to a modern reader, was such as to give it an ascendency over the different islands to the eastward of Greece, and to enable it to maintain, in the Peloponnesian war, a long struggle against a strong confederacy. When overcome at last, in consequence of what may be termed an accidental cause—the capture of its fleet by Lysander-its political depression was of short duration; the activity and industry of its inhabitants revived its trade, so that Athens continued for ages the most populous and commercial place in Greece.

Tyre, though at no time a town of great extent, remained long in the enjoyment of considerable trade. From the reign of Solomon, when its commercial activity is described in Scripture, to its capture and destruction by Alexander the Great, there elapsed a period of seven centuries. The formidable resistance it made to the Macedonian arms impressed Alexander with a strong sense of the value of commerce, and its effect in increasing the sources of national power. Though known to the world chiefly as a warrior, Alexander had considerable claims to the character of a politician. He adopted, and caused his followers to adopt, to a certain extent, the manners of the nations they conquered; and by the expedition of Nearchus from the mouth of the Indus to the Persian Gulf, he discovered a commendable zeal for maritime discovery. Equal judgment was evinced by him in founding his new city of Alexandria in a position such as to command

an extensive range of intercourse. The Nile brought to it on one hand the valuable products of Egypt, and afforded on the other a ready inlet to the merchandise imported from Europe. To India also the route by Alexandria and the Red Sea was preferable to that of the Persian Gulf, which involved the necessity of a considerable journey by land.

Contemporary with the decline of Athens and the rise of Alexandria, but superior to either in commercial activity, was Carthage, the destruction of which forms one of the foulest plots in the history of the Romans. The situation of Carthage was well adapted for trade; its harbor was good, its range of navigation extensive, both to east and west. Founded by a colony from Tyre, it maintained a friendly intercourse with Phœnicia; while in the west of the Mediterranean, in Sicily, Spain, and the south of France, it met with no commercial rival. These countries, at that time uncivilized, and almost uncultivated, were greatly indebted to Carthage for the introduction of intelligent settlers, and derived from her the same advantages which Greece, several centuries before, had received from Phoenicia and Egypt. In Spain the fine harbors of Carthagena and Cadiz were rendered the resort of shipping by the Carthaginians; and without calling on our readers to believe the traditional assertions of the extent of their navigation, either to the north of Europe or the south of Africa, we may with confidence affirm, that had not this state unhappily fallen, from the jealousy of the Romans, it would have been the means of diffusing industrious habits over a great part of the west of Europe, and of advancing by several centuries the progress of the useful arts.

The policy of Carthage, though not uniformly pacific, was far less pernicious than the perpetual tendency to aggression of a military state like Rome. In navigation the Romans were at no time remarkable. During their conflicts with the Carthaginians they sustained repeated losses, chiefly from the unskillfulness of their seamen, and their inability to cope with the fury of the elements. After they had triumphed over the Carthaginians, and extended their conquests to Macedon and Greece, the Romans were no longer under the necessity of equipping fleets, because no maritime state dared to dispute their supremacy. But the extension of the Roman power was favorable, in several respects, to commerce; piracy was suppressed, and merchant vessels had free access to almost every part of the Mediterranean. Hence a gradual increase in the length of mercantile voyages, which now extended on one hand to the north of France and Germany, on the other to the Indian Ocean, to which it became easy, from the progressive improvement of navigation, to proceed either by the Red Sea or the Persian Gulf. The mariner's compass was still unknown, but the uniform direction of the wind in certain seasons enabled the navigators to and from India to complete their voyages with little difficulty.

It was towards the middle of the fifth century, about a hundred years after the removal of the seat of empire to Constantinople, that the Romans became unable to defend their frontier against the uncivilized tribes who pressed on them from the north and east. The consequence was,

6

that the country along the Rhine, the inland provinces of Gaul, and, some time afterwards, Spain and the north of Italy, were overrun by these rude assailants. The increase in the population of towns was checked, many places being plundered, others subjected to heavy contributions, and property in general rendered unsafe. There was no longer a central or general government; the territory of the empire was divided into a number of separate states, the rulers of which had no just idea of the importance of commerce. These uneducated governors, accustomed to appeal on almost all occasions to the sword, were not sufficiently enlightened to forego the temptation of a present seizure for the sake of the lasting advantage of mercantile intercourse.

The apprehension engendered by the approach of barbarians from the north and east, led a number of traders and manufacturers settled in the north of Italy to fix their families in the small islands near the mouths of the Po. There the surrounding waters afforded them a degree of protection against invaders, who, however formidable by land, had no means of carrying on hostilities by sea. Such was the origin of Venice, a city situated in the midst of the waters, and destined to acquire extensive trade from the security attendant on her position, and to take a lead amidst the mercantile states of the middle ages.

Next to Venice in the history of modern commerce came Pisa, a town built on the banks of the Arno, at a distance of nearly three leagues from the sea. Its trade was chiefly with the western coast of Italy, with Sardinia, Corsica, and Sicily. Its commercial importance was prior by two centuries to that of Genoa, although it never equalled the latter in extent of navigation, nor in the number of distant settlements. Pisa declined from its commercial rank, in consequence of Leghorn, which was situated immediately on the coast, being better

adapted to foreign intercourse.

Genoa continued flourishing from the year 1000, until its ill-judged hostilities with Venice in the latter half of the fourteenth century. These were injurious to both, yet both recovered from the effects, so as to hold, during several centuries, a distinguished rank in trade. They were remarkable also, particularly Venice, for a variety of the finer manufactures. Neither could boast of a supply of the raw materials of almost any manufacture in their respective territories; but their numerous merchant vessels brought a variety of products from a distance, and the amount of the population of either city was such as to render practicable that division of employment which is the soul of manufacture, and which was at that time almost unknown in other parts of Europe.

Constantinople had the good fortune to remain untouched by the enemies of the empire until the middle of the fifteenth century, a time when civilization had made progress in the west of Europe, and literature was on the eve of receiving a great extension by the discovery of the art of printing. To this fortunate coïncidence of the revival of the arts in the west, at the time when the east of Europe was sinking under the pressure of barbarism, we owe the preservation of much that was valuable in the ancient world; and, among other things,

that of certain manufactures and branches of commerce. Constantinople had all along maintained a commercial intercourse with Venice and other ports in Italy, and, in general, with Alexandria. The same had been the case in regard to India; for when the occupancy of Egypt by the Saracens prevented the trade to India by the Red Sea, it was kept up by the Caspian and Euxine. But by far the shortest course from the east of Europe to India is by the Euphrates and the Persian Gulf. It was to the extent of intercourse carried on by this channel, some time after the Christian era, that we are to ascribe the wealth and grandeur of Palmyra, a city erected in the midst of deserts. This would have continued one of the chief routes of communication between Europe and India during the middle ages, had not the caravans been in perpetual danger from the Arabs, after the decline of the civilized governments in this part of Asia.

The trade between Europe and India, though of considerable value, was not extensive enough to be productive of the wealth ascribed to it by Dr. Robertson and other historians, who, acquainted practically with commerce and its limited gains, are ready to lend an ear to the sanguine statements of early writers. Thus the wealth of Venice, commonly ascribed to its trade with Alexandria and India, was the consequence of a variety of causes, no one being of particular importance, because several centuries were passed in the gradual increase of its population and capital. Venice afforded a secure resort in ages when other countries were in danger of invasion and plunder. It had also a prudent government, in times when, in most parts of Europe, there was little idea of a free constitution, or of a regular administration of justice. Venice was in this state when, in the twelfth and thirteenth centuries, the increase of traffic, arising from conveying the crusaders, with their military stores, and the readiness of those zealous combatants to extend the sway of a Christian state, enabled that commercial republic to increase her foreign territories. In general, the foreign policy of Venice was pacific, but she found it difficult to avoid hostilities with the Turks, or to escape from taking a part in the repeated contests which took place between France and Austria for the territory of the Milanese.

Those who take an interest in tracing the gradual extension of industry, will find in Venice the origin of several important commercial institutions. In that city was established the first public bank, and there also was first introduced a funded debt transferable from hand to hand. The same thing held in regard to lesser matters connected with the details of mercantile business. Bills of exchange, if not invented by Venetian merchants, were first carried by them to a great extent; and the principles of book-keeping by double entry were there first understood and applied in practice. However familiar those principles may be to merchants of the present day, they were too refined for the rude and primitive state of most parts of Europe in the middle ages.

And here it may be well to point out the fallacy of a notion general in Spain, and not uncommon in other parts of Europe, namely, that in the middle ages Spain was a flourishing country, and possessed,

in Tarragona, Tortosa, and Zaragoza, great population and wealth, each of these towns being said to have contained several hundred thousand inhabitants. This singular opinion was widely spread, in consequence of the prominent figure made by Spain in the politics of Europe, in the reigns of Charles V. and Philip II. The public did not take into account the great addition of power conferred on Spain by her possessions in Italy and the Low Countries; nor were there in these days statisticians capable of explaining the very slow manner in which either cultivation or commerce can acquire extension in a country so mountainous, and with so few means of transport, as Spain. Of roads she can boast only the few that are required for the purposes of government, the cross roads being little more than bridle paths, and the traffic of the country being in general carried on by mules. All this indicates a scanty population and a backward state of society, as has been the case in Spain in every age; for there is no truth in the traditionary opinion that her population was greatly thinned by emigration to America. The number of persons who proceeded annually from Spain to America never exceeded the tenth part of those who at present go annually from Ireland to Canada. The truth is, that the power of Charles V. and Philip II. was great only because the power of the other princes of Europe was very limited. The military establishments of that age were quite insignificant compared to those of the present times.

One of the chief features in mercantile history during the middle ages was the association of towns in the north of Europe for the purpose of giving security to mercantile property. At that time the different countries of Europe were very imperfectly governed; there were then no regular posts and very few roads, so that the means of redressing grievances, or of making communications from one part to another were very imperfect. Too much has been said of the political power exercised by the Hanse Towns; but the association was of great use in protecting individual property. It dated from the middle of the thirteenth century, and originated at Lubeck, a seaport, which had not in those days more population or wealth than at present, but possessed much more comparative importance, because very few places in Europe could at that time boast of 30,000 or 40,000 inhabitants. The trade between the Baltic and the west of Germany centred in the harbor of Lubeck, in ages when navigators were not sufficiently skilled to proceed to or come from the Baltic by the circuitous route of the Sound. The association of the Hanse Towns consisted first of Lubeck, Hamburg, and Brunswick, but soon extended to other places—to Amsterdam, Dordt, Cologne, on the one side, to Dantzic, Konigsberg, Riga, on the other. These and many smaller towns, to the number of sixty and upwards, became members of this protecting body, which continued in a state of union during three centuries. At the end of that time it was gradually dissolved, not by any violence or exercise of authority, but by the continued progress of civilization; the different governments in the north of Europe having by that time acquired the power of protecting their mercantile subjects. It is now about two centuries since the association of the Hanse Towns ceased to exist in a comprehensive sense; and for a considerable time the name has been confined to Hamburg, Lubeck, and Bremen.

Hamburg took the lead of other trading towns of the north of Germany, by means chiefly of the extent of its river, and the consequent easy communication with the sea on the one hand, and the interior of Germany on the other. It gained also by the improvement of navigation in the fifteenth and sixteenth centuries, when vessels from the south of Europe found it no longer necessary to suspend their voyage at Bruges, but found it practicable, and even easy, to proceed at once as far as the Elbe.

The wealth and possession of the Netherlands belong, like the early opulence of Tyre, and the magnitude of the trade of Carthage, to the remarkable phenomena of mercantile history. To judge from the physical aspect of Holland, the general marshiness of the soil, the indifferent climate, and the total absence of mineral products, we should be inclined to consider it among the least favored countries of Europe; but all these disadvantages were balanced, and more than balanced, by the possession of extensive water communication. No part of Europe equals Flanders and Holland in extent of inlets from the sea, in the breadth of navigable rivers, or in the ease with which canals may be excavated. To these advantages, much more than to civil institutions, we are to ascribe the early prosperity of the Netherlands; for these apparently unpromising countries took a lead in civilization, almost as remarkable as the more favored regions of the north of Italy. That they were not so early in the career of improvement, was owing to the comparative barbarism of the countries in the north of Europe with which they held intercourse; while Italy had communication on one hand with Constantinople and the eastern empire, on the other hand with the south of France, the west of Italy, and various seaports which still preserved a portion of ancient civilization.

The soil of Flanders, without being naturally fertile, was more easily cultivated than the comparatively marshy districts of Holland. Hence the early superiority of the Flemings in agriculture and manufactures. It was in the fourteenth century that the art of weaving the finer woollens was introduced from Flanders into England, and in the sixteenth that we derived from the same quarter many useful improvements in agriculture and gardening. The progress of the Dutch in navigation was equally remarkable. The Maese and Rhine enabled them to bring down the bulky produce of the interior, such as timber, corn, or cattle, to their own coast, as well as to carry up these rivers, to the inland provinces, the various articles of merchandise imported from the south of Europe. Hence the increase of Dordt and Rotterdam. The rise of Amsterdam was owing to a different cause—to the extent of the Zuyder Zee; to the easy access which that expanse of water afforded to vessels from the Elbe, the Weser, and the Baltic.

Bruges owed its increase to its adoption as an intermediate port for vessels from the north and south of Europe. A voyage from the Mediterranean to the Baltic was in those days a formidable undertaking; seafaring men accounted it too long to be performed out and home in one season, and gladly embraced the opportunity afforded by the warehouses of Bruges for landing their cargo from the south, and taking on board another from the north, without the delay of a passage through the Sound. This plan of dividing the voyages to the north continued during the thirteenth and fourteenth centuries; in the fifteenth it in a great measure ceased, because the improvements in seamanship made it easy for vessels to proceed direct to Hamburg, Co-

penhagen, and other northern parts.

Antwerp succeeded Bruges as the station authorized by the Hanse Towns; but its prosperity was mainly owing to the width and depth of the Scheldt, which may be said to surpass any of the maritime inlets in the north of Europe. The time of the chief prosperity of Antwerp was in the sixteenth century; its population and wealth had attained a great height for so unimproved an age, and would have continued to increase, had not the tyranny of Philip II. provoked the inhabitants to insurrection, and exposed them to all the evils of a siege and capture by a military force. 'The consequence of this misfortune, and of the continued intolerance of the Spanish government, was the removal to Amsterdam of many of the inhabitants, and of a great share of the mercantile business of Antwerp. In the next century the Dutch acquired great political weight, and took advantage of it to prevent the navigation of the Scheldt, that Amsterdam and Rotterdam might possess exclusively the trade with the interior provinces. This singular prohibition, unexampled in the history of commerce, remained in force 150 years; for the Scheldt was not opened to merchant vessels until 1794, when the Netherlands fell under the dominion of France. During all that time Antwerp was deprived of the benefit of foreign trade; its population ceased to increase, and remained stationary at the number, on an average, of 50,000.

The great object of navigators in the fifteenth century was to reach India by the ocean, and to carry on what was accounted a lucrative traffic without interruption from the Turks or Arabs. The discoveries required for this purpose were made by the Portuguese, who, in situation, were nearer than other Europeans to the western coast of Africa, the line necessarily followed by those who aimed at reaching India by a new course. The Portuguese had in those days more than one prince of the blood disposed to patronize maritime discovery; but their seamen were very unskillful, so that in following their awkward efforts at discovery, we find season after season passed in tracing the unknown part of the coast of Africa to a distance of only fifty or sixty leagues. This inconceivable slowness marked the navigation of the Portuguese in their progress towards the equator, until, in 1484, they ventured to forsake the coast, stood out to the open ocean, and penetrated 1500 miles to the south of the line. From that time

a bolder course was taken by these adventurers, and at last the discovery of the route to India by the Cape of Good Hope was accomplished in 1497.

The discovery of America was effected in a very different manner. Though accomplished by Spanish vessels, the honor of the enterprise belonged more properly to Italy; for it was only in a country accustomed to navigation, and possessing well-educated mariners, that so distant a voyage could have been accounted practicable. Many years were passed, as is well known, by Columbus in forming his plan, and soliciting the aid required to carry it into effect; but, once embarked in the attempt, the success was speedy, because the mind of the conductor was sufficiently enlightened to persevere in the voyage, instead of returning, as would probably have been done by an inferior navi-

gator, before traversing the half of the Atlantic.

We now come to the sixteenth century, the time when the productive industry of Europe received a considerable impulse from the influx of the precious metals from America. At that time the chief trading towns of Europe were in Italy, the Netherlands, and, in a much less degree, in France, England and Germany. In the latter countries the towns were very small, not being peopled to the extent of one third of their present numbers. Nothing shows more clearly the backwardness of manufactures in that age, the imperfect division of employment, or the limited communication between one province and another. There were in those days few lines of intercourse entitled to the name of roads, or fit for conveying corn or merchandise by wheel carriages. Even in countries comparatively level, such as the south of England, the north of France, the north of Germany, there were no carriage-roads, and goods were conveyed on the backs of mules and horses, in the same manner as over the mountainous regions of the Alps. Nor were there in that time post-office establishments for the service of either governments or merchants.

An increase in town population is the best evidence of improvement in agriculture, as in commerce. In a rude state of cultivation, the labor of seventy or eighty persons is required to raise provisions for a hundred; so that three fourths of the inhabitants are obliged to live in country districts, for the mere purpose of raising subsistence. But as machinery and implements become improved, and the art of husbandry is better understood, the farmer can render more effectual the labor of himself and his assistants; there remains a greater surplus of provisions for the support of the inhabitants of towns; and somewhat more of the population are enabled to attach themselves to employments distinct from agriculture, namely, those of mechanics and manufactures. To this improved condition Europe was slowly advancing, when the discovery of the silver mines of America had the effect of materially quickening its progress. This renders it proper to make a few remarks on the supply of gold and silver in early

(To be continued.)

### OPERATIONS OF THE NEW-YORK CLEARING-HOUSE.

A Table showing the aggregate Clearings and Balances paid for each week, from Oct. 10, 1853, to Oct. 8, 1855.

Boston Clearing-House.—A meeting of the representatives of the Boston Banks, to consider the expediency of establishing a Clearing-House for the settlement of the daily balances between the banks, was held in the rooms of the Merchants' Bank, Boston. Franklin Haven, Esq., was chosen President of the meeting, and William Thomas, Esq., of the Webster Bank, was appointed Secretary. The President read a paper presented by the Hon. Waldo Flint, President of the Eagle Bank, in favor of the establishment of a Clearing-House, which document had been approved by twenty of the Boston Banks, representing more than two thirds of the banking capital in the city. On motion of Andrew T. Hall, Esq., President of the Tremont Bank, a committee of eight was appointed to make such arrangements as they may deem proper for the purpose of carrying out the objects named in the paper signed by the banks, said committee to report at a future meeting. This committee was constituted as follows: Andrew T. Hall, Tremont Bank; Waldo Flint, Eagle Bank; Benjamin E. Bates, Bank of Commerce; Thomas Lamb, New-England Bank; Almon D. Hodges, Washington Bank; George W. Thayer, Exchange Bank; Franklin Haven, Merchants' Bank; Daniel Denny, Hamilton Bank. Henry B. Groves, Esq., of Salem, has been chosen Manager of the new Clearing-House, established by the Boston banks. Mr. Groves is at present one of the Bank Commissioners of Massachusetts.

### NEW PUBLIC BUILDINGS IN NEW-YORK.

### THE NEW TONTINE.

In a late number of this magazine an account was given of this Society, with views of the old and new buildings. We are one of those utilitarians who prefer a handsome new building to an ugly old one, unless it possess other associations than those of mere age. That New-York is of this opinion, the lower part of the city bears abundant testimony; for not only does the proprietor of a twenty-five-foot lot pull down, here and there, some old-fashioned structure of the year '35, but the owners of an entire street raze the buildings to the ground, seemingly without concert, in a single season, and erect upon their sites others in all the modern glories of stone, iron, marble, and plate-glass.

The present Tontine is in purer taste than usual. The architect had, it is true, a better field for architectural effect than is generally met

with, but size is not the only requisite.

Standing in front of the Exchange, its long, unbroken façade, its heavy projecting cornice, and its pale, soft color, make a pleasant object for the eye to rest upon, jutting out as it does on a bend of the street. It is in the same style as the Trinity Buildings and the Corn Exchange Bank; a style which professional men call the Florentine or the Romanesque, but which we would call the sensible; one in which, where strength is required, there are massy piers; where light is necessary, there are broad open windows, not spanned by lintels which look as if they would break, but by a graceful semi-circular arch.

The Florentines had but little idea of the value of space or of man's labor—building walls four or five feet thick, and covering one or two acres with courts and galleries. Their buildings were massive, almost like fortresses. They sought for effect in deep shadows and grand masses—the two best specimens, the Pitti and Strozzi palaces being built of huge stones, squared in courses, but rough as when

taken from the quarries.

History tells us how one merchant-prince, scoffingly, reared a facsimile of his neighbor's palace above the cornice of his own; but it never occurred to them to build a six-story hotel on slender iron columns, that the ground beneath might still be vacant for the purposes of trade. In the Trinity Buildings the effect has been more closely followed than the spirit. The Corn Exchange Bank, by the same architect, is better, but neither equal to the Tontine. Here the material is Caen stone instead of brick, while the building without, being inferior in strength, is lighter and more graceful. About four feet above the pavement rise a row of stone piers, connected by semicircular arches. The piers are capped, the corner ones being heavier to sustain the lateral pressure. The arches are moulded with a keystone bearing a grotesque head. The door-way is in the building, and

is of a bolder character, attracting the eye as a doorway should. Two more stories rise above this in the same style; the third marked by an elaborately carved string-course. Above these is a plain, low attic, the openings being divided into two arches to obtain a better proportion. The whole is crowned by a richly ornamented cornice, which is the great feature of the building, jutting boldly from the wall in a long, unbroken course. The interior is divided into light and airy banking-rooms and offices, the only fault of which lies in their not being fire-proof.

The building reflects credit on its architect, James Renwick, Jr.

### BANK DIVIDENDS.

### NEW-YORK CITY.

The following are the bank dividends payable in 1855, as compared with prior years:

RHODE-ISLAND.—The Governor of Rhode-Island has issued the following proclamation in reference to the spurious currency attempted by the Tower Mining Co.:

ing Co.:

"State of Rhode-Island and Providence Plantations, Executive Department, Providence, October 12, 1855. The attention of the public is called to the issue of bills as currency by the Tower Mining Company, a corporation incorporated by the General Assembly of this State. The corporation are not vested with any banking powers whatever, and are expressly prohibited by their charter from emitting any bills of credit.

WILLIAM W. HOPPIN, Governor."

<sup>\*</sup> And an extra dividend of 1214 per cent.

### LIST OF PRIVATE BANKERS

In the Principal Cities and Towns of the United States.

This List will be re-published on 15th December, with such additions and corrections as shall be furnished to the editor.

### FOREIGN ITEMS.

Mrs. Gore and Strahan & Paul's Bankruptey.—A litigation is likely to arise out of the bankruptey of Strahan & Co., for the proprietorship of certain bonds for the sum of £13,500, advanced by the firm many years ago to the Hon. General Cavendish and his eldest son; and one for £3500, advanced by the late Sir John Paul to his own brother-in-law, the late Lord Ravensworth. In the year 1847, these bonds, with some minor ones, were assigned to Mrs. Gore, the authoress, as security for a sum of £23,000 consols, sold out of the funds by her trustee, the late Sir John Paul, on the plea of obtaining better interest by investment in Exchequer bills, but in reality to be appropriated to the use of the firm. Letters, dated November, 1847, from Sir John and his partners, explaining to Mrs. Gore (who was then on the Continent) the nature of the transaction and the validity of the bonds, have been laid before the Bankruptey Court, in consequence of the official assignee having applied for the cession of these securities. The case appears to be one of peculiar hardship.—Sun.

RAISING THE RATE OF DISCOUNT.—Liverpool, October 18.—The announcement that the directors of the Bank of England have again raised the rate of discount, created considerable uneasiness on 'Change to-day, and a memorial was immediately prepared, calling upon the local Chamber of Commerce to petition Parliament for the temporary suspension of Peel's Bank Act, with the intention of relieving the existing pressure by the circulation of paper money. The petition is being numerously signed.

Bank of France.—The restrictive measures lately adopted by the Bank of France are beginning to be felt in almost every branch of trade, and transactions have accordingly become difficult. Manufacturers have limited as much as possible their purchases of raw materials, and retailers are slow in laying in their usual winter stock. The general situation, however, is satisfactory. The summer months, during which business is always dull, have been highly productive this year, thanks to the Universal Exhibition! Orders continue to be received from the United States which had not appeared in the market for last year. Important demands have also arrived from South-America and England, and there is every prospect of the export trade of Paris assuming a great activity in the winter. The price of corn has again increased this week. Flour has advanced from 3 francs to 4 francs per sack of 159 kilogrammes, and wheat in nearly the same proportion. This rise, however, is ascribed to the tardiness of the sowing, occasioned by the dry weather in September, and to other local causes, which leave the farmers no time to bring their produce to market.

The Finances of Russia.—In the beginning of this year, the circulation of government notes amounted to 536,337,021 ruble silver, an increase of 244,461,440 ruble silver, compared with the note circulation in the beginning of 1853. The bullion in the vaults of the government, to secure the circulation of paper money, in the beginning of 1855, amounted to 151,790,985 ruble silver, against 146,794,848 same time 1853, an increase of only 4,996,137 ruble silver. The debts of Russia in the beginning of 1853 amounted to 57,149,000 Dutch florins, mostly negotiated by Dutch bankers; 110,867,050 ruble silver home debt, and 223,861,476 ruble silver and £5,280,009 foreign debt. The expenses for carrying on the war being estimated at 20,000,000 silver rubles per month, and the most important resources of the government being stopped by this war, the finances of Russia must be in a very critical position.

Grain in Europe.—The alarming news in relation to the grain crops on the continent of Europe, as published a few weeks ago, have been fully confirmed. Prices of wheat and rye continue high, and in some markets have further advanced. People there, judging from our high prices, fear that the consumption here has so much increased as to require all our supplies, and expect but little grain or flour from this side. We are happy to state that the disease of potatoes has not further

appeared, and the roots generally have not suffered so much as was feared from the sudden decay of the herb.

Special Deposits.—The name of the firm of Strahan & Co. was originally Snow & Walton. It was one of the oldest banking-houses in London, second only to Child & Co., who date from 1640. At the period of the Commonwealth, Snow & Co. carried on the business of pawmbrokers, under the sign of the "Golden Anchor." The firm, about the year 1679, suspended its payments, in common with most of the London bankers, owing to the circumstance of the scizure of their money by Charles II. On a recent examination of the books of Strahan & Co., one was discovered of the date of 1672, which clearly shows that the mode of keeping accounts in those days was in decimals. It is curious to observe the nature and quality of the articles pledged with this house. They were of a miscellaneous and somewhat conical character. One of the entries in the book runs thus: "March 10, 1672—To fifteen pounds lent to Lady ——, on the deposit of a golden pot decharabre." The blank might be filled up with an existing Scotch title. About twelve years ago, Mr. Strahan changed his name from Snow to Strahan, in consequence of the then-late Queen's printers having left him £180,000 on condition of his taking that name, previous to which the title of the firm was Snow, Paul & Co.

THE FINANCES IN HOLLAND.—The financial budget for the year 1856, presented to the Chamber recently by the Minister of Finance, estimates the ordinary expenses for that year at 73,547,380 florins, and the receipts for the same period at 73,587,155 florins. In order to compensate for the deficit occasioned by the abolition of the mill-tax, various other imposts will be increased. The extraordinary expenses of the budget of Marine will be covered by the colonial surplus, which is estimated for the year 1856 at 16,000,000 florins.

The Paris Emphricon of 1855.—As a commercial speculation, the Palais de l'Industrie is a tailure. The shares have already fallen from 170 to 140. The sale of season-tickets so far is greatly less—I will not say than the London Exhibition—than even the Dublin Exhibition, or of the Sydenham Palace, during the same period of time. The managers of the company have acted as tricky Frenchmen always act; you cannot make these fellows honest business men. In the first place they palmed out on every body, who, desirous of seeing the Fine Arts Courts, was simple enough to ask for a season-ticket for the Exhibition, a season-ticket for the Industrial Courts, which they refused to take back under any circumstances; they give no change, to secure the high premium silver bears now; and they are so much incensed at being forced to allow exhibitors a free entrance, they spite themselves on them in every conceivable way.—Paris Letter.

The private letters from Paris mention that it is now stated the new loan will be for £20,000,000 only, instead of £30,000,000; also that the proposal for taxing the railways will be immediately brought before the Legislative Assembly, and that a demand will be made for an increase of 150,000 men to the army.

A tax of ten per cent on the gross receipts of French railroads is about to be imposed, and the companies will be authorized to make a proportionate increase in their tariffs.

The general advices from there continue to describe a favorable appearance of the various rates of exchange, although at some places there has been a slight increase in the demand for money. At Paris, the rate of discount out of doors, as well as at the Bank of France, is 4 per cent. At Hamburgh, it has advanced to 3½ per cent; at Amsterdam, it is 4 per cent; and in Belgium it is as low as 2½ per cent.

CANADA.—It appears that, at the suggestion of the Council of the Quebec Board of Trade, the Governor-General of Canada transmitted to the Home Government a memorial for the appointment of a competent person, to reside in the United States, to protect the commercial interests of her Majesty's British North-American subjects. The British Secretary of State has replied, that it is not deemed requisite to create the appointment prayed for; but that, nevertheless, the British Minister and Consuls in the United States will be directed to pay special and constant attention to the interests of her Majesty's subjects residing on this Continent, by which, it is presumed, the object of the Quebec Board of Trade will be better attained than in the manner suggested.

Berlin.—Yesterday, October 10, the Royal Bank of Berlin raised its rate of discount for bills from 4 to 4½ per cent, and its rate of interest upon security of goods (Lombard) to 5½. In August and September, the bank had endeavored to restrict its extent of business by increased tightness; but toward the close of the last month, the fear of the rate of discount being soon raised, and the facility for employing money elsewhere at a higher rate than ruled here, compelled the Bank to enlarge its facilities. The report of the state of the institution at the close of last month shows, as compared with the same date of last year, in

|                                       | Reichsthaiers.  |
|---------------------------------------|-----------------|
| Specie, a decrease of,                | 1,023,000       |
| Bills discounted, increase,           | 10,399,800      |
| Advances on goods, increase,          | 619,000         |
| State securities, etc., decrease,     | 5,542,300       |
| Notes in circulation, increase,       | <b>213,3</b> 00 |
| Deposits at call, increase,           | 772,400         |
| Giro and other liabilities, increase, | 3,765,900       |

The practice of giro is, as far as I know, peculiar to this country, and consists in a species of bills issued by the Bank, accepted or not, according to certain arbitrary rules, and payable any time within a certain term fixed, after which the Bank does not hold itself unconditionally responsible for the amount. These bills are drawn against cash or bills sent in for discount, and furnish a circulating medium apart from the issue of notes, by which the customer avails himself of the balance to his credit without diminishing the immediate resources of the bank in cash and notes.

Berlin is not an important place of commerce or of manufactures. It has nevertheless this point of interest for us just now, that it is one of the sources from which our supply of silver for the East is obtained. In face of the fact that for some time past silver has left this country for London, in many cases vid Paris, the exchange on England has been rising gradually, and stands now within a fraction of par, (6.19\frac{1}{3},) which it has not reached for more than a twelvementh.

The Borsen Zeitung, or Exchange Gazette of this place, mentions that the Russian government is endeavoring to effect a sale to the United States of America of its possessions in the north of that continent for the sum of 40,000,000 silver rubles. Should the bargain be brought to a satisfactory conclusion, various indulgences are to be extended to the commerce of the United States on the part of Russia.

BILLS OF EXCHANGE.—A change in the law is about to take effect, which, in its bearing on the internal operations of English commerce, is likely to prove very important. From and after the 24th of October, 1855, the Summary Procedure on Bills of Exchange Act is to come into operation. The object of its framers was to remove all means of frivolous or fictitious defences to actions on bills of exchange and promissory notes; and the decisive character of its provisions renders it necessary that every trader in the country should be well apprised of them. A new form of writ of summons is to be issued, after which the plaintiff may in twelve days, unless leave to defend the action be meanwhile obtained, proceed to judgment and execution. Leave to appear is to be granted only on the defendant paying the amount of the claim into court, or upon satisfactory affidavits disclosing a legal or equitable defence, or the necessity for the holder to prove consideration, or such other facts, and on such terms as to security, as to the judge may seem fit. One summons may be made to include all the parties to the bill. The Act applies exclusively to England and Wales, and not to Iroland or Scotland.

FREE TRADE IN RUSSIA.—The National contains a letter from St. Petersburg, in which it is stated the war in which Russia is engaged, combined with the civil war in China, has had a most crippling effect upon the Asiatic trade by way of Kiachta and the Chinese frontier station of Maimmatchin, the amount of which was previously estimated at from ten to fifteen millions of silver rubles annually. This traffic has hitherto been a monopoly, the results of which were extravagant prices; but, by a ukase of the 13th of August, the monopoly is abolished, free prices substituted, and sundry other regulations introduced, by which it is hoped traffic will be facilitated.

### MISCELLANEOUS.

Philadelphia Finances.—The Philadelphia Ledger gives a gloomy view of the finances of Philadelphia. While New-York five per cents are at par, Philadelphia sixes are at a large discount. The Ledger says:

"The credit of our city does not improve. The slight advance in the price of the funded debt hardly equals the accruing interest, and the city warrants are two or three per cent lower than they were a month ago. On the first of January next, the city will owe over two millions of dollars, which it will have no means to pay. This is a deplorable condition of things for a great and wealthy city like Philadelphia, and we regret there is much reason to believe no adequate provision will be made by the present Councils to better our discredited condition. from present indications, the city will have to default in the payment of the next semi-annual interest of its funded debt. The banks, it is openly proclaimed, will advance no more money, the last loaned the city for the payment of interest not having yet been settled. Mr. Welsh, in Select Council, has made a very lucid address on our financial difficulties to Councils and the public, so far as showing the amount of our indebtedness, and our inability to pay. But his suggestions as to the mode of meeting the difficulty, we think, will be found unsatisfactory. He proposes an increase of taxation—and a pretty large increase, too—saying little or nothing of any decrease of what many now believe the profligate expenditures of the city administration. An increase of taxation is ever an ungracious proposition, and will be esteemed peculiarly so by our tax-payers, who feel the burthen thus imposed already very onerous; but to propose it without an attempt to lessen expenses will, we are very sure, meet with little favor."

COURT OF CLAIMS.—Mr. Jacob Barker, of New-Orleans, (once a noted banker and financier of Wall street,) has filed a claim against the United States, before the new Court of Claims, for differences between lawful money and depreciated paper money, in which latter he was paid by the Treasury in 1814 on \$3,446,103. Mr. Barker, Mr. Girard, and Mr. Parish were then among the competitors for the new Treasury loan.

CIRCULARS.—The Postmaster-General insists upon taxing printed circulars with a severe rate of postage, although contrary to the spirit of the law. Thus a printed letter-sheet, with a printed envelope, (weighing  $\frac{1}{4}$  oz.,) is charged two cents, and, if a half-sheet is added, three cents. He also proposes to tax price-currents with letter-postage, namely:

"POST-OFFICE DEPARTMENT,
APPOINTMENT-OFFICE, September 1.

"Sir: In reply to your letter of the 25th ult., I have to inform you that it has been decided that a newspaper, or price-current, or printed circular, containing a private card on the same, is subject to letter-postage, for the reason that it is an attempt to evade the law. I am, respectfully, Your obedient servant, "St. John B. L. Skinner,

"Acting First Assistant Postmaster-General.

"D. H. ARMSTRONG, ESQ., P. M., St. Louis."

USURY IN MARYLAND.—A decision was given by Judge Presstman, from which it appears that the obligation to pay the tax on a mortgage debt, in addition to six per cent interest, does not constitute usury under the contract of lending. This decision was given in the case of T. Zink versus Schreur. The complainant leaned the defendant money, to secure the payment of which, the defendant executed a mortgage on certain leasehold property in this city. The defendant, Schreur, failed to pay his bond, and Zink filed a bill foreclosing the mortgage, and obtained a decree, and the property was sold in pursuance of the decree. Schreur excepted to the ratification of the sale on the ground that the contract of lending was usurious, inasmuch as the mortgage contained a covenant obliging a mortgagor to pay the tax on the mortgage debt in addition to the six per cent. Judge Presstman held that the covenant to pay the tax did not render the contract usurious, and ratified the sale.—Baltimore American.

USURY IN CONNECTICUT.—The Supreme Court of Connecticut, the court of last resort, have, in the case of the Mechanics' and Working Men's Mutual Savings Bank and Building Association of New-Haven against John Wilcox and others, (a petition for foreclosure,) just decided a loan made by that Bank to be usurious. By this decision, the Bank loses about \$2400; and if it applies, as it probably does, to all the loans made by the Bank—which were, January 1, 1855, \$329,229.56—the principle established will take from that Bank about \$130,000, provided the debtors take advantage of this decision. There are said to be thirty-two other banks established in New-York State upon the same principle.

The Five-Cents Savings Bank, Boston.—This institution, established at No. 32 School street, has deposits to the amount of \$450,957.33. Its depositors number eight thousand four hundred and fifteen. It pays five per cent interest to depositors. It has been in operation but eighteen months, and its success has been truly astonishing. Its funds are profitably and safely invested, and all its affairs are under the care of its careful and faithful board of officers. The benevolent men who interested themselves in establishing this institution, for the purpose of giving the people, old and young, a place for the safe-keeping of their small as well as large savings, could hardly have anticipated the wonderful success this Bank has had.

Bank Checks.—The liability of a bank in paying a forged check upon it has been established by the courts of both England and the United States, and this liability to loss should be duly considered by bank cashiers and paying tellers. The rule established is to this effect: If a bank pay a check with a forged signature, it cannot afterwards recover the amount from the indorser, or from the party to whom it may have been paid, although the latter may be able to sustain the loss. The bank is bound to know the signatures of its own customers, and cannot recover the amount paid on a forged check, unless there be collusion between the parties to the check, or unless the bank obtain, (as it should,) whenever there is any doubt as to the genuineness of the signatures, a guarantee from the payee.

A disputed case arose here last month. A check on the Sub-Treasury, drawn

A disputed case arose here last month. A check on the Sub-Treasury, drawn by a disbursing officer in the West, was presented with a signature so different from that of the drawer on file, that payment was refused, unless the banker here who received it from his correspondent would guarantee the signature to be genuine. This the latter refused to do, (although the demand was perfectly reasonable,) and the check was protested for non-payment. In this case, the check turned out to be genuine; but the Sub-Treasury officers pursued the right course under the circumstances, knowing that, if fraudulent, and paid by them, the loss would fall upon them individually.

The noted case of Ellis & Co. versus Ohio Life & Trust Co.(in which the loss involved was \$14,000) has a bearing on this point, (reported in full in the Bankers' Magazine.)

Losses on Stocks.—The Boston Courier of the 13th inst. contains the following

paragraph relative to the depreciation of stock markets:

"The truth of the axiom, that 'riches take wings and fly away,' was fully exemplified yesterday, by the sight and perusal of a private schedule of railroad stocks and bonds belonging to an individual, and valued eighteen months ago at a little over \$374,000, the market value of which to-day is only about \$113,000, showing a depreciation of \$261,000 in one year and a half, besides the loss of interest. These securities were pledged as collateral security for borrowed money, and as they declined in value, other property was placed with them to keep the margins good until the unfortunate borrower could respond no further and was finally obliged to fail. Among the securities enumerated, were bonds and shares of the Grand Junction, Vermont Central, Ogdensburgh, and Boston and New-York Central Railroads. This is only one of many cases, not of the same magnitude, of course, but similar in kind if not in degree. The system of borrowing on pledges is a serious evil, which often entices people to ruin. At the present time it is practised in New-York to a fearful extent. The bank loans and discounts there already reach to the enormous aggregate of \$98,000,000, a very large per centage of which is demanded loans on collateral pledges, liable to be notified at any time by giving one day's warning. This expansion of the currency has inflated the market for stocks and bonds in that city to such an extent, that a sudden collapse is likely to occur at any moment."

### BANK ITEMS.

CAUTION TO BANKERS.—Of late years it has been the practice among banks and bankers to provide themselves with printed envelopes for mailing letters to their respective correspondents. This obviates misdirection when the writers are in a hurry, or overburdened with business, and thus insures more prompt delivery. It is equally important that the writer's address should be distinctly printed on some

portion of the envelope.

Complaints are frequently made of the failure of letters to reach their destination; but it will be found that generally the failure or delay arises from the errors or want of caution on the part of the writers. We frequently receive letters from places having names similar to towns in other States, and without the particular State being named in which the writer lives. This is even a frequent fault among bankers, who should, of all classes, be explicit in their address. We observe among the advertised letters at Buffalo, retained for want of pre-payment of postage, letters for one of the banks in this city. This is no doubt a frequent neglect, and too much caution cannot be observed in having the writer's card or address distinctly printed on his envelopes, so that, in ease the postage is accidentally not pre-paid, the Postmaster may know whom to notify of the omission.

Notwithstanding the regulation of the Post-Office Department, requiring the prepayment of postage on letters designed for the mails, has been published in every conceivable form, some fifteen or twenty unpaid letters are daily deposited in the Post-Office in this city. Letters to State functionaries seem to be peculiarly liable to this course, perhaps in consequence of the supposition by the writers that they are not subject to postage. Except the President, Members of Congress, and the heads of departments and bureaus at Washington, none enjoy the privilege of receiving and sending letters without paying the postage. In Washington City, an attorney makes it a business to advise parties, to whom valuable letters detained are addressed, by circular, of the fact, offering to pay and forward them upon their inclosing ten cents in postage-stamps or money-and in this way he no doubt earns the thanks of many. The same thing might probably be done in this city with good results. In this connection, we will repeat what we have already stated, that it has been decided by the Post-Office Department that it is the duty of deputy-postmasters to forward, as addressed, all post-paid letters to which a three-cent stamp, or greater fraction of the postage due upon them may be affixed, even though they may be addressed to California; but to treat letters on which a cent stamp may be affixed, as if they were wholly unpaid. Among the letters recently deposited in the New-York Post-Office, the postage unpaid, is one for Hon. E. W. Leavenworth, Secretary of State of New-York.

New-York.—The following country banks have been established recently in this State:

I. The Waverly Bank at Waverly, Tioga county; capital, \$100,000; President, John C. Adams, Esq.; Cashier, Georgo H. Fairchild. H. The Cuba Bank. HI. Oswego River Bank. IV. Chemung County Bank. V. Cambridge Valley Bank, at North White Creek. VI. Smith's Bank at Perry. VII. The Briggs Bank of Clyde. For capital and names of officers, see list of New-York Banks, pp. 350-360.

Clearing-House.—In the Clearing-House, A. E. Silliman, Esq., of the Merchants' Bank, has been made Chairman of the Managing Committee in place of F. W. Edmonds, resigned, and Mr. Soutter, President of the Bank of the Republic, is elected a member of the Committee.

New-York City.—A new Bank, to be called the "Park Bank," is to be located on the site of Clinton Hall, adjoining the Nassau Bank. Capital, \$600,000. The Directors are John E. Hanford, Ellis Ayres, R. H. Arkenburgh, W. S. Whitney, George J. Byrd, E. V. Haughwout, David Conger, W. P. Earle, A. B. Miller, E. B. Wesley, M. S. Whitney.

Brooklyn.—The Brooklyn Bank selected John B. Hill, Esq., of New-Brunswick,

(President of the State Bank,) as their Cashier, in place of Mr. Morrison, resigned. Mr. Hill has declined the appointment, which has since been conferred upon Mr. Peter S. Henderson, Paying Teller of the Bank of the Republic, N. Y.

People's Bank.—The appointment of Mr. De Angelis to the situation of Cashier of the Mechanics' Bank, has elevated Mr. Godfrey W. Leake, the present Paying Teller of the People's Bank, to the responsible situation of Cashier of the latter institution. Mr. Leake was formerly in the City Bank of this city in various capacities, and left that institution on the organization of the People's Bank to fill his present situation.

Bank of the Commonwealth.—I. P. Cronkhite, Esq., of the late firm of Richards, Cronkhite & Co., has been elected President of the Bank of the Commonwealth, in place of James B. Wilson, Esq., resigned.

New-York Bank Agencies.—Since the official statement published in our November number was prepared, the following changes have occurred:

| Name and Location.          | Late Agent.       | Present Agent.         |
|-----------------------------|-------------------|------------------------|
| Bank of Havana,             | North-River Bank, | Commercial Bank, Troy. |
| Canal Bank, Lockport,       | F. P. James,      | R. C. Allin & Co.      |
| Smith's Bank of Perry,      | New,              | Albany City Bank.      |
| Mechanic's Bank, W'msburgh, | Broadway Bank,    | Bank of the Republic.  |

Sacket's Harbor.—Erskine M. Camp, Esq., has been elected Cashier of the State Bank, Sacket's Harbor.

MAINE.—The Mechanics' Bank at Portland commenced business October, 1855, with a capital of \$100,000; President, Allen Haines, Esq.; Cashier, William H. Stephenson, Esq. The Atlantic Bank at Portland is now closing its business.

New Banks in Maine, established in 1855:

| Name.       | Location.   | Cashier.           | President.      | Capital. |
|-------------|-------------|--------------------|-----------------|----------|
| Oakland,    | Gardiner,   | S. Bowman,         | N. Wood,        | \$50,000 |
| Alfred.     | Alfred.     | Jno. N. Stimson,   | Nathan Dane,    | 50,000   |
| Bath,       | Bath,       | E. C. Hyde,        | Freeman Clark,  | 50,000   |
| Canton,     | China       | Z. Washburn,       | C. A. Russ,     | 26,700   |
| People's.   | Waterville, | S. Percival,       | P. L. Chandler, | 50,000   |
| Mechanics', | Portland,   | Wm. H. Stephenson, | Allen Haines,   | 100,000  |
| Auburn,     | Auburn,     | E. F. Packard,     | J. Roak,        | 50,000   |

VERMONT.—Bills have been introduced into the Vermont Legislature, to incorporate the Bank of Chelsea and the Cabot Bank; and for the relief of the Stark Bank of Bennington.

MASSACHUSETTS.—George E. Hersey, Esq., was elected Cashier of the Howard Banking Co., on the 18th June last, in place of Stephen Bartlett, Esq., who resigned on account of ill-health.

Boston.—The Receivers of the Cochituate Bank having represented to the Supreme Court that it is desirable that a time should be fixed within which all claims upon said Bank should be presented for proof or allowance, or otherwise for ever barred, the Court has fixed upon the 1st of April next as the time. The Receivers say that there still remain outstanding and unproved \$14,000 of the bills of this Bank.

Uncurrent Money at the Suffolk Bank .- The amount of foreign money received at the Suffolk Bank, affords a certain index of the vast expenditures made by the strangers who have visited Boston in October. On Friday, October 26th, the foreign money received at that institution exceeded, by about twenty per cent in amount, the deposits of any day since the Bank was established. The receipts of foreign money at the Suffolk reached to the sum of two millions fifty-nine thousand nine hundred and twenty-eight dollars! The largest sum received on any previous day was but \$1,700,000.

Boston —G. Francis Thayer, Esq., was elected Cashier of the Grecers' Bank, Boston, November 20th, in place of Pliny E. Kingman, Esq., resigned.

Vermont.—There are in Vermont forty-two banks, of which twelve, nearly one third, neither declared nor earned a dividend during the year covered by the report. One of these has declared no dividend since July, 1852, and several others have omitted dividends for a year and a half or longer. Of those which have paid dividends, at least three have done so while there was an apparent deficit of resources, and the dividends were paid out of capital rather than out of earnings. So that more than a third of the banks in the State have in reality earned nothing for the stockholders during the year. Three banks in Burlington, with an aggregate capital of \$450,000, hold doubtful and suspended paper to the amount of more than \$175,000, considerably more than a third of their capital. It is stated that several others hold doubtful paper to such an amount that, in the estimation of the Commissioner, they ought to declare no dividends till this paper assumes a more promising aspect. The average of dividends on all the banking capital which has been in operation long enough to earn dividends, is only five and a half per cent.

Connecticut.—The Elm City Bank at New-Haven commenced business on the 20th of October, with a chartered capital of \$500,000. E. C. Seranton Esq., President; D. R. Satterlee Esq., (late of the Stanford Bank.) Cashier. The notes of the Elm City Bank have just been finished by Jocelyn, Draper, Welch & Co., the American Bank Note Company of New-York. In addition to the usual protection against counterfeiters, they have red backs showing the denomination, and also a quantity of intricate lathework, which not only almost prevents the usual method of counterfeiting, but operates as a guard against lithographic counterfeits; for it is considered impossible to transfer, by the photographic process, either side of the notes, without the colors striking through from the other side. The Elm City Bank is the only one in the State which has yet adopted red backs.

Waterbury.—The subscription to the capital stock (\$150,000) of the Mattatuck Bank, of Waterbury, has been completed, and the Bank will go into operation immediately.

Tolland.—The Rockville Bank will commence operations in January, 1856. Mr. E. B. Preston, at present Teller of the State Bank, Hartford, has been appointed Cashier. A fire-proof banking-house, of brick with stone trimmings is now in rapid progress of construction, and is to be finished, according to contract, on or before the first of January, for the use of this Bank.

PENNSYLVANIA. — The new City Bank, at Philadelphia, gives notice that the third installment of five dollars on its capital stock, will be payable on the first day in November; the fourth installment of five dollars per share on the 1st of December next: the fifth installment of five dollars per share on the 1st of February, 1856; the sixth installment of five dollars per share on the 1st day of March, 1856; and the seventh and last installment of five dollars per share on the 1st day of April, 1856.

Warren.—The Warren County Bank has been chartered and commenced operations. President, J. Y. James; Cashier, Rufus P. King.

DISTRICT OF COLUMBIA.—The congressional act forbidding the issue or circulation of bank-notes of a less denomination than five dollars, in the District of Columbia, will go into operation on the 1st of November. It is very stringent in its provisions, providing for a fine of ten dollars for each note issued in violation of the act; of five dollars for the passage of each small note issued by banks without the District, and for the forfeiture of the license of any authorized trader who shall receive or pay out such paper.

NORTH-CAROLINA.—The Bank of Wilmington, at Wilmington, N. C., commenced business on the 10th September last. John MacRea, Esq., President; Stephen Jewett, Esq., Cashier.

GEORGIA.—We are informed, on reliable authority, that the bills of the Bank of Atlanta, to the amount of \$4900, were lately under protest, and that legal proceedings will be forthwith instituted to forfeit and annul the charter. The following are the circumstances as we are informed: A gentleman from Illinois, called at the Bank immediately after the opening of its doors in the morning, and presented \$35,600

for redemption, and during the whole forenoon, the Bank only counted \$10,000—which could have been accomplished easily in thirty minutes, as the packages were made up of bills of \$5 and upwards, and put up in packages of \$500 each. In the afternoon the payment of the remaining \$25,000 was demanded by a notary, who was paid all but \$4900, when he was ordered by the Bank officers out of the Bank, whereupon he proceeded to protest that amount. At a former period, only a few weeks since, the Bank of Atlanta, and the Bank of the Interior, at Griffin, kept an agent waiting about eight days before they paid him \$190,000, which was presented by him. Our statute requires that all banks shall pay their bills, "promptly on demand," and in case of failure the Governor, on proof thereof, is required to proceed against them to forfeit and annul their charters. That the Bank of Atlanta has in this instance clearly forfeited its charter there is not a reasonable doubt. For every man, familiar with banking custom, knows that \$35,000 could be counted and paid as well in two hours as two days. And as the Bank failed to pay "promptly" in the language of the law, it has therefore forfeited its charter.—Augusta Chronicle.

Ohio.—The Cleveland Herald says: "A movement is now on foot for the purpose of forming a Joint Stock Association, to be known as the 'Wool Growers' Bank,' or by some other equally significant name. The object of the Association is to aid wool-growers in disposing of their clips, and securing to the producer the market value of his stock, protecting him against sudden and temporary depression in the wool market. The capital of the Association is not yet determined; it probably will be \$1,000,000, and divided into shares of, say \$100 each."

Akron—The Akron Branch of the State Bank of Ohio is now closing its concerns, its assets being in the hands of a receiver.

KENTUCKY.—The Northern Bank of Kentucky has established another Branch (being the fifth) at Barboursville, Knox county, on the Cumberland River, and near the Tennessee State line. Madison Ward, Esq., is President of this Branch. Bills payable at this place, and at Somerset and other remote points, are not likely to return very rapidly for redemption.

ALABAMA.—The annual message of Governor Winston to the Legislature of Alabama, recommends that no new banks be chartered. There are five banks in that State at present, emitting a large circulation of notes; there are also several bank agencies and insurance companies engaged in banking operations, but the amount of banking capital is inadequate to the wants of the State. The Governor says, however: "The tax bills show immense sums loaned at interest, demonstrating the fact that we have abundance of capital in the country, fully equal to all the legitimate demands of a well-regulated business, and that an increase would only stimulate speculation and dangerous adventures, and consequent reaction and disaster."

WISCONSIN.—Several new banks have been established in Wisconsin, under the general banking law:

I. The Fox Lake Bank, at Fox Lake county; capital, \$25,000; President, John W. Davis; Cashier, Charles Seeling.

II. The Waukesha County Bank, at Waukesha, Waukesha county; capital, \$25,000; President, A. Minor; Cashier, C. C. Barnes.

III. Janesville City Bank, at Janesville, Rock county; capital, \$25,000; President, Henry H. Dunster; Cashier, Samuel Lightbody.

IV. Kenesha County Bauk, at Kenesha, Kenesha county: capital, \$25,000; President, J. C. Coleman; Cashier, J. H. Kimball.

Indiana.—The Auditor of State of Indiana, gives notice that the securities of the following banks will be sold at the Merchants' Exchange, New-York, at noon on the 29th October. These securities are mostly Indiana and Pennsylvania 5 per cents, and Virginia and Louisiana sixes. For account of the Plymouth Bank, at Plymouth; State Stock Security Bank, at Newport; Traders' Bank, at Terre Hante; Drovers' Bank, at Rome: Farmers' Bank, at Sterling; Agricultural Bank, at Mount Sterling; and New-York Stock Bank at Vincennes—all of Indiana.

THE delegates from the Branches of the Bank of the State of Indiana, at Indian-

apolis, having disposed of the business before them, adjourned to meet the last Tuesday in January next, at 2 o'clock, at the same place.

The following is the maximum to which the capital stocks of each branch may be increased, when authorized to receive additional subscriptions:

| New-Albany,      | \$100,000       | Plymouth,     | 200,000 |
|------------------|-----------------|---------------|---------|
| Jeffersonville,* | 500,00 <b>0</b> | Lima,         |         |
| Madison,         |                 | Indianapolis, |         |
| Vincennes,       |                 | Rushville     |         |
| Terre Haute,     |                 | Bedford       |         |
| Lafayette,       |                 | Connersville, |         |
| South-Bend,      |                 | Fort Wayne,   |         |
| Logan sport,     |                 | Richmond,     |         |
| Laborton         |                 | ,             | ,       |

Passed the following resolution:

"Resolved, That the Branch be directed to do no banking business, except to deposit the first installment which has been paid, until the further order of the Board."

State Bank of Lattana.—Chartered 1855.—The Bank and Branches have been organized, and the following appointments made:

| Location.       | President.             | Cashier.           | Capital.                |
|-----------------|------------------------|--------------------|-------------------------|
| Indianapolis,   | Hugh McCulloch,        | James M. Ray,      |                         |
| Bedford,        | Benjamin Newland,      | N. F. Malott,      | \$200,00 <b>0</b>       |
| Connersville,   | Mercdith Helm,         | <u> </u>           | 250,000                 |
| Fort Wayne,     | Hugh McCulloch,        |                    | 250,000                 |
| Indianapolis,   | Washington H. Talbott, |                    | 500,000                 |
| Jeffersonville, | Charles Howard,        |                    | 500,000                 |
| Lafayette,      | E. F. Nexsen,          |                    | 400,000                 |
| Laporte,        | D. G. Rose,            | Samuel Burson,     | 500,000                 |
| Lima,           | John B. Howe,          |                    | 100,000                 |
| Logansport,     | Cyrus Vigus,           |                    | 200,000                 |
| Madison,        | John Marsh,            |                    | 400,000                 |
| New-Albany,     | J. J. Brown,           | V. A. Pepin,       | 400,000                 |
| Plymouth,       | A. L. Wheeler,         |                    | 200,000                 |
| Richmond,       | Robert Morrison,       | Charles F. Coffin, | 250,000                 |
| Rushville,      | George Hibblin,        | <del></del>        | <b>2</b> 00,00 <b>0</b> |
| South-Bend,     | John Reynolds,         | Ethan S. Reynolds, | 250,000                 |
| Terre-Haute,    | John P. Usher,         |                    | 850,000                 |
| Vincennes,      | J. N. Eastman,         | J. F. Bayard,      | <b>25</b> 0,00 <b>0</b> |

TENNESSUE.—The House of Representatives of the Tennessee Legislature, have adopted a resolution, by a vote of thirty-seven to twenty-six, declaring it to be the sense of the House "that the Bank of Tennessee should be put in a gradual state of liquidation by the present General Assembly." Banks and bank capital are much needed in Tennessee, and the old system of chartered banks has done more good for the State than the new free bank system over can do. The latter is liable to sad perversions and losses.

New-Granada,—A charter for the "National Bank of New-Granada," to be located in Bogota, the capital, has been granted to a company of American citizens, namely: Henry Wells, James A. Regna, Percy J. Avery, Henry S. Willis, Moses Starbuck, William L. Avery, Solomon Saunders, and Lovis D. Townley. The legal rate of interest is ten per cent. The Carthagena Tribune speaks favorably of the undertaking, but regrets that the charter was issued so soon (26 days) after the passage of the law authorizing the establishment of a national bank, inasmuch as, if sufficient time had been allowed, other companies in England and the United States might have competed for the privilege, and perhaps at a lower rate of interest.

NOTICE TO BANKERS.—Bankers cannot be too fully aware of the importance of having their address, town, county and State, distinctly printed on their envel-

<sup>\*</sup> Directors at Jeffersonville, S. II. Patterson, Levi Sparks.

opes, as well as printed at the head of their circulars. We frequently receive letters and orders from parties (illegibly written) and are puzzled to find out their names, residence, or even the State where they reside. A decided advantage arising from having the name of the writer distinctly printed on the envelope is, that in case of non-payment of postage, or of a misdirection, or its going to the dead letter office, the government officials may know to whom to return it.

Counterfeits.—Mr. J. S. Dye has issued a new and valuable work entitled the "Bank Note Delineator." In this volume is a correct description of every genuine bank-bill issued in the United States. By this work, the community can readily discriminate between genuine and fraudulent bills. To banks and brokers the work is of great value and should be held by every man dealing in uncurrent money, as well as by those who receive such bills. The price of the entire work is two dollars.

THE following banks have given notice of their intention to discontinue the business of banking; their notes are redeemed at their own counters and at the offices of their respective agents, unless otherwise noted.

| Camden Bank,                             | Camden.                             |
|--|-------------------------------------|
| Empire City Bank,                        | New-York,at North-River Bank, N. Y. |
| Farmers' Bank of Mina,                   | Mina.                               |
| Knickerbocker Bank of the City of N. Y., | New-York,at North-River Bank, N. Y  |

The transactions during the month of November have been on a limited scale; but without any material change in market values. The banks that pay eight per cent dividends range from 104 to 110. These paying ten per cent dividends are quoted at 115 to 140. The fluctuations in these shares are less than in any other stocks on the market, as they are largely held for investment, not for speculation. They vary, in fact, less than the quotations of State or city loans.

### New Works.

- I. The Numismatic Dictionary; or, Nominal Catalogue of all the Coins ever issued; with their Countries, Values, Multiples, and Divisions. Edited and Published by Peter Whelan, Numismatist. No. 42 Bedford street, Strand, London. Price, two shillings.
- II. The Theory and Practice of Banking; with the elementary principles of Currency, Prices, Credit, and Exchanges. Being a Systematic Treatise on Monetary Science. By HENRY DUNY-ING MACLEOD. London: Longman & Co. Two volumes octavo. Fourteen shillings each.
- III. A Collection of the Customs Tariffs of all Nations. Based upon a translation of the work of M. Hubner. By C. M. NEWDEGATE, M. P. London.
- A work of great value to merchants, and one that should be in every public library.
- IV. A History of Gold, as a Commodity and as a Measure of Value: its Fluctuations both in Ancient and Modern Times. With an Estimate of the Probable Supplies from California and Australia. By JAMES WARD. London: Price, one shilling.
- V. The Chemistry of Gold. With Modes of Mining, Washing, and Assaying Gold Ores, and Hints for distinguishing them from similar substances found in connection with them. By J. Scoffenn, M.D. London: Price, one shilling.
- VI. Swan's Bank-Note List and Detector. Issued monthly at Montgomery, Alabama.

This work is published in a neat style at two dollars per annum. There is a variety of useful information in the work, in addition to a copious list of new and old counterfeits,

### Notes on the Money Market.

NEW-YORK, NOVEMBER 26, 1855.

Ecchange on London, at Sixty Days' Sight, 81 a 81 Premium.

THE month of November has been a strongly marked one in financial matters, and will long be remembered by those who were so unfortunate as to be caught in a cornered position, as is termed by stock operators.

The month of October showed a comparatively favorable market, both financially and commercially. Exchange on London was abundant at 9 per cent. The specie going to Europe was, to be sure, large, but it was believed that such shipments were made mainly under special orders from France and England, to meet certain unfavorable events then feared in both countries. On the 26th ult., however, the reception of news from Europe had the effect to place the money market in a reversed position, and to force public securities immediately to a decline of three to five per cent. This depression continued several days, and a reaction occurred only after the reception of two weeks' further intelligence from Europe.

The supply of Foreign Exchanges is very large, the South sending heavy amounts of Sterling and Francs into our market. Rates for the steamer are still unsettled, and not likely to improve. We hear of sales of first-class Sterling Bills at 105%, and France at 5.20. The demand is better than last week, and the remittances by the Collins steamer on Wednesday will be very large. Specie shipments are out of question for the present, and we look for a heavy accumulation of specie before the close of the year.

Such was the pressing want for money during the early part of November, that strictly prime paper was sold as low as 15 per cent per annum, while paper less known was with difficulty passed at even two per cent per month.

If our Usury Laws were abolished, as they actually are in Great Britain, a large amount of capital (now locked up while the limit is seven per cent.) would be set affoat if 8, 9, or 10 per cent

could be legally charged. Yet money is worth these rates at least; while many will not lend under the restricted rates.

There was no real ground for the decline in stocks early in November, and it is unfortunate that the stock market is exposed to such violent fluctuations each day of the year. The foreign news can reasonably be brought in no connection with our railroad traffic. The shares of such roads, paying a regular dividend of eight to ten per cent, ought to command a rate above par at any time, and certainly at present when a large crop of grain, with a continued demand for export, warrants an increasing traffic during the whole winter. This class of securities should therefore not be subject to the daily fluctuation; the receipts of the roads should rule the market value of their shares. As for such shares of completed roads in operation, that have never carned a dividend, and are now in such a position as not to admit any hope for a near prospect of paying a dividend, they are of no value, and whatever rates they command is solely the result of speculation without any sound basis. We are aware that these stocks, like many others, never actually change possession; it is a mere game for the differences. However, such games are played even on a larger scale on nearly all the foreign Bourses, and there seems to be no remedy for it.

The Bank of England on the 15th ult., advanced the rate of discount from 5½ to 6 per cent for bills under sixty days, and to 7 per cent for bills from sixty to ninety-five days. Of this measure the London Times says, the measures of the Bank of England to-day are rather more stringent than was expected, but, although they will cause the financial course of the country during the next two or three weeks to be regarded with almost unparalleled watchfulness, they have excited neither dissatisfaction nor alarm. It is assumed that the next Gazette return will exhibit a further large decrease in the bullion, and, apart from this, the fresh step taken by the Bank of France confirms the necessity for increased caution. At the same time the Bank of France advanced the rate of discount from 4 to 5 per cent.

The Bank of England rate for advances on Consols, Turkish scrip, and other Government securities was, at the last date, 6 per cent.

The quotations for public securities are yet sufficiently high to indicate a superabundance of capital. For instance, the Bank of England stock is quoted at  $207~\alpha~209$ —yielding less than 4 per cent on the investment.

The changes in the rate of discount by the Bank of England during the present year, we now annex, with the cotemporary values of Consols, and the Bullion held by the Bank:

| Date.         | Rate of<br>Discount. | Price of<br>Convols. |   | Bullion in Bank. |

The Official Tables of revenue, imports and exports of the United State for the past fiscal year (ending June 30, 1855,) have been made known; from which we add the following summary, and similar returns for the last ten years:

### IMPORTS INTO THE UNITED STATES FROM FOREIGN PORTS.

| <b>Y</b> oo<br>ondu<br>June | ng | Dutiable.    | Free Goods             |               | Specie and<br>Bullion. | Total<br>Imports.         |
|-----------------------------|----|--------------|------------------------|---------------|------------------------|---------------------------|
| 1845                        |    | \$95,106,724 | <br>\$19,077,598       |               | <b>\$</b> 4,070,242    | <br><b>\$</b> 117,254,564 |
| 1846                        |    | 96,924,058   | <br>20,990,007         | • • • • • • • | 8,777,782              | <br>121,691,79 <b>7</b>   |

| 1849                        |    | 132,252,325  | <br>16,356,37 <b>9</b> |               | 6,360,224              | <br>154,998,923           |
| 1849                        |    | 125,479,774  | <br>15,726,425         |               | 6,651,240              | <br>147,557,439           |
| 1850                        |    | 155,427,936  | <br>18,081,590         |               | 4,628,792              | <br>178,138,818           |
| 1851                        |    | 191,118,345  | <br>19,652,995         |               | 5,453,59 <b>2</b>      | <br>216,224,93 <b>2</b>   |
| 1852                        |    |              | <br>24,187,590         |               | 5,505,044              | <br>212,945,442           |
| 1558                        |    | 236,595,118  | <br>27,152,152         |               | 4,201,892              | <br>267,978,647           |
| 1854                        |    | 272,546,431  | <br>26,327,660         |               | 6,906,162              | <br>805,780,258           |
| 1855                        |    | 221,292,624  | <br>86,430,524         |               | 8,659,812              | <br>261,882,960           |

These figures may be correct as far as the Custom House figures can be relied upon; but we

would think it safer to allow fully 10 per cent (15 would be nearer the mark) for defective invoices and false values. If this position be correct, the imports will exceed the exports, namely:

### EXPORTS FROM THE UNITED STATES TO FOREIGN PORTS.

| Year<br>ending<br>June 30. | Domestic<br>Produce. | Foreign<br>Produce. | Specia and<br>Bullion.     | Total<br>Exports.       |

| 1855                       | 192,851,135          | <br>26,158,968      | <br>66,247,343             | <br>275,156,8 <b>46</b> |

The Customs revenue for the fiscal quarter, ending 30th September, continue large. Compared with the two previous years, the revenue from Customs, Lands, and other sources would appear to be as follows for the quarter ending September 30:

|                | 1853.        | 1854.                        | 1855.        |
|----------------|--------------|------------------------------|--------------|
| Customs,       | \$19,718,822 | \$18,689,799                 |              |
| Lands,         | 1,489,562    | 2,781,654                    | 2,355,725    |
| Miscellaneous, | 147,995      | 149,550                      |              |
|                | \$21,356,379 | <b>\$</b> 21,521,39 <b>2</b> | \$19,774,460 |
| Expenditures,  | 15,081,383   | 16,169,830                   | 16,594,116   |

The United States will, therefore, present to the world an exhibit of a larger revenue than the actual wants of the government require; including a large outlay for the redemption of the public debt. This is a satisfactory feature in the financial history of the country; although the merchants (importers) of New-York may well say to the government, as the frogs said to the boys, in the fable, "It is fun for you, but it is death to us."

In other words we may say with perfect truth that the government of the United States is growing rich at the expense of its own citizens. True, the latter are at fault; but the system of loading the country with foreign goods at the rate of Tirree Hundred Millions annually, (as the Treasury tables for 1-53, 4, and 5 demonstrate,) leads not only to the stringency now prevailing, but encumbers us with a heavy foreign debt that will require thirty or forty years to liquidate. In case of any serious revulsion in the finances of Western Europe (now our creditors to three hundred milions, as carefully estimated) would react upon New-York and upon the whole interior. Our agricultural resources are not so vast as to enable us to cancel this debt in a few months or a few years; and it is the duty of our people to husband their resources so as to be prepared for the unfavorable change now (without actual ground we hope) predicted in England and the Continent.

An issue of the 6 per cent debentures of the Province of Canada for £500,000 was announced in October by Messrs. Laurence, Son & Co., and Capel, Norbury & Co., London. The subscription price is to be 107, and they are redeemable in 1880. The sum is to be paid in four monthly installments of 25 per cent, commencing on the 31st inst., and 5 per cent discount will be allowed on payments in anticipation. This issue forms part of the aid to be granted by the Colonial Government to the Grand Trunk Railway, and, notwithstanding the state of the money market, a large portion has already been taken.

We have advices from San Francisco to the 20th of October, by the Nicaragua steamer. The shipment of gold at this time, was by the mail line, owing to the political dissensions in Nicaragua. The San Francisco Chronicle of the 20th, says: "The payments falling due yesterday (19th.) were unusually heavy, and money has been very tight, more so, we think, than for many steamers past. The country dealers have by no means paid up well, a sure indication that the dry weather is at length telling upon the products of the mines. Rain is now anxiously looked for throughout all the gold-bearing districts, and upon its late or early advent, depends in a great measure the commencement of our Fall trade and the maintenance of prices."

The business of the New-York City Banks for the past few weeks is shown in the annexed summary:

| 1855.    | Loans.             | Specis.          | •  | Circulation | 7. | Deposits.    |    | Sub-Treas-<br>ury Coin. |    | Coin in<br>Banks and<br>Sub-Treas. |

The New-York City banks are pursuing a very careful course, and are becoming better fortified with specie, so as to counteract any unfavorable condition in the foreign exchanges. At present the rates for bills on England and the Continent forbid the export of coin. No shipments were made by the Cunard steamer which left Boston for Liverpool on the 21st inst., and unless the foreign intelligence during the next two weeks is very disastrous, the rates of European bills will remain in our favor, and even the most unfavorable advices cannot immediately produce such rates for bills as to draw more coin from this country.

It will be found, too, that the course adopted by the Bank of England, in advancing the rate of interest to a high point, (6 per cent.) will serve to check undue speculation, and likewise to check any heavy drains of bullion to the East.

Early in October a loss of fifty thousand dollars in gold was sustained by the American Express Co., while in transit from Dubuque, consigned to the Sub-Treasury at New-York. No trace has yet been discovered of the loss, nor are any parties implicated in the transaction.

We learn that the Express Co. paid, on the 29th inst., at the Sub-Treasury, the fifty thousand dollars. The Sub-Treasurer at this port acknowledges the payment, in his official report of Government Funda received. It seems that a delay of ten days was granted by the Treasury Department to the Express Co. in order to enable them to trace the loss and to satisfy themselves that the money actually came into their possession; and a further period of thirty days was allowed them to make a full examination of the case. In this examination one of the Government officers, deputed by the Treasury, accompanied the committee or agents of the Co. The thirty days expired, and the Co. have duly paid over the amount.

Government Six per Cent Loans are fully maintained in the market, and only small lots are occasionally offered. The decline in State Loans is owing to the temporary scarcity of money.

Pennsylvania Five per Cents at present rates, are equivalent to Six per Cents at par; but it is somewhat derogatory to the credit of that great State that its securities (even within its own limits) are held at less than those of Ohio or Kentucky.

The more abundant accumulation of capital in the country, the larger resources exhibited in its productions; and the increased confidence felt in the ability of the States to maintain their credit, will forbid, for the future, any return to the lamentable quotations or values recorded in 1842-3.

Maryland is rapidly reducing its debt. Virginia, Missouri, and North-Carolina are extending their funded indebtedness, by a liberal aid to numerous public works. The railroads now in progress in these States will serve to develop rapidly the mineral and agricultural wealth of each of them.

In railroad shares the transactions are large, mainly of a speculative character. There are few sales of Norwich & Worcester R. R., and of Providence & Stonington. Reading and N. Y. Central are firmly held, with little offering at present rates. Cleveland & Toledo is in better odor, and bids air to rise further. We annex the changes of the month:

The receipts of the rallroals, (especially those at the West,) are very heavy, and will result in Ilberal dividends to the stockholders. One remarkable fact in the commercial history of the year .. is, that several States are, for the first time, exporters of wheat. The first shipment from Georgia was made a few weeks since. Hitherto that State has consumed all that was raised. Kentucky has also become an exporting State for wheat and corn, which find their exit via Cincinnati to the seaboard. We learn also that the planters of Kentucky have made extensive preparations for their wheat harvest of the year 1856. In some counties from 50 to 100 per cent more land is now appropriated to grain than in previous years. Wheat has averaged hitherto 60 to 70 cents per bushel, and Indian corn 25 to 40 cents. Now, wheat is worth 100c, or more, which is looked upon as an enormous price; and corn is selling at \$1 per barrel.

In railroad bonds the most important transactions of the month have been in Illinois Central, at an advance of 2 @ 3 per cent compared with last October. Hudson River mortgages, which have, for a long time past, been sustained at a premium of 1 @ 3 per cent, are now quoted at 95 4. N. Y. Central Sixes are still under the quotations of October. We add the closing rates of the past seven weeks for bonds and miscellaneous shares:

### DEATH.

IN NEW-YORK CITY, Wednesday, November 7th, John B. Desdorty, Esq., aged sixty years, for many years and until his death, Cashier of the Chemical Bank of this city.

# BANKERS' MAGAZINE,

AND

# Statistical Register.

Vol. V. New Series. JANUARY, 1856.

No. VII.

### THE FINANCIAL REVIEW OF THE YEAR 1855.

The year 1855 has not been prolific in important financial events. There have been no sudden revulsions—no extraordinary crises—no remarkable failures among either individuals or corporations. We may except, perhaps, two or three cases of some magnitude; but, on the whole, the year 1855 may be classed as one of commercial and financial prosperity.

In the English money market the variations in the quotations of consols have been slight, even in the face of an enormously expensive European war—a war which has made some inroads into British capital, but which has, thus far, done no very serious damage to public securities. The extremes of values of consols have been from 93\frac{2}{3} the highest, (month of March,) to 88\frac{1}{3} the lowest, (month of September.) In the prosecution of this war, large loans have been negotiated in behalf of the British, French, and Turkish governments; but the quotations for these have been well maintained throughout.

In the domestic money markets we have had no occasion to note any extraordinary occurrences. Early in the year the market was comparatively quiet, and the rates on loans were moderate. In the latter part of the year there was a marked stringency, namely, from the 1st of October to the end of December. In another portion of this sketch we give a comparative view of the prices of stocks for 1854 and 1855, showing an improvement generally in the current year.

January.—On the first day of this month, the financial circles of 33

Wall street were alarmed by the report of the failure of Messrs. Wadsworth & Sheldon, fiscal agents at New-York of the State of Illinois. Their liabilities to the State were about \$362,000, part only of which was secured by the securities or bondsmen of the agents. This failure subsequently led to the adoption of measures by the State of Illinois, whereby the interest payable by the State Treasury will be hereafter paid at the American Exchange Bank in this city.

Immediately after this failure was made known, the suspension of Messrs. Belcher & Brothers of St. Louis was announced, with liabilities above one million of dollars. This failure affected the credit of Messrs. Page, Bacon & Co., who it was supposed were involved by the losses or difficulties of the former firm. The failure of Messrs. A. G. Farwell & Co., of Boston, and of two produce houses at New-York, immediately followed that of Messrs. Belcher & Brothers.

On the 10th of this month, the Erie Railroad loan of four millions of dollars was effected or closed, at the rate of eighty per cent; the loan to be reïmbursable in the year 1875, bearing seven per cent interest per annum; and a sinking fund of \$35,000 per month to be provided out of the net revenues of the Company—the U. S. Trust Co., of New-York, to act as the Receiver of this sinking fund.

On the 12th, the drafts of Messrs. Page, Bacon & Co., on Messrs. Duncan, Sherman & Co., of New-York, were protested for non-payment: the former firm were indebted to the latter in the sum of \$150,000, which Messrs. D., S. & Co. refused to augment, without sufficient collateral security.

On the 18th, the firms of Page & Bacon, and Loker, Renick & Co.,

at St. Louis, suspended payment temporarily.

On the 22d, the two million Freeland loan of the Illinois Central Railroad Company was closed at the minimum fixed, namely, 70 per cent—the bonds bearing seven per cent interest, and re-payable in the year 1860. This loan, and that of the Erie Railroad Co., were the last important negotiations of the year in this market. Various attempts were subsequently made to negotiate fresh loans in Wall street; but the continuance of the war in Europe, and the diminished demand for American securities abroad, deterred parties from making very strenuous efforts to effect large negotiations after this time, except those for this State.

During the month of January the failures of Messrs. W. A. Hill & Co., and Messrs. Hoon & Sargent, and General Larimer, bankers, of Pittsburgh, were announced. Also, Messrs. Stanton & Wilcox, stockbrokers, New-York; Messrs. A. G. Farwell & Co., Boston; Foster & Stephenson, and Winthrop G. Ray, New-York; Loker, Renick & Co., St. Louis; Howard, Smith & Co., bankers, Detroit.

On the 10th of this month, the blockade of the Black Sea by the Allies was announced in the London papers, to take effect on the 1st of February. On the 30th, the British ministry resigned. Advices reached New-York early in January, of the proposed loan in behalf of the French government, to the extent of twenty millions sterling, or five hundreds millions of francs. Consols in the London market ranged from 90½ to 92½, closing at 91½ a 91¾. Bank of England stock

ranged from  $208\frac{1}{2}$  a 212. During the month of January there were numerous failures in England, for large amounts. The Bank rate of discount throughout the month was five per cent. A marked contrast was seen in the stock values of the present month as compared with January, 1854, a summary of which, for the sake of future reference, we now annex:

The following table of market values of railroad securities in January, 1854, and January, 1855, at the West, will exhibit the extraordinary losses to which such investments are subject.

|   | 1854  |            | 1865.  |         | Decr   | ease. |

The specie exports for the month of January from New-York were only \$156,398, and from Boston, \$298,735. The foreign exchanges were well equalized during the month, bills on London at sixty days' sight closing at 109 a 109\frac{1}{4}.

February.—The legal dispute as to the validity of the so-called spurious or Schuyler stock of the New-York and New-Haven Railroad Company, was brought before the Supreme Court of New-York, in order to test as early as practicable the legal right of stockholders.

On the 9th, the drafts of Burgoyne & Co., of San Francisco, on their New-York agents, were protested for non-payment. The suspension of the former firm soon followed the announcement of the discredit of their bills.

On the 15th, Messrs. Page & Bacon, of St. Louis, resumed payment, having secured an extension on a large portion of their cash liabilities.

The principal financial item of the month was the passage of the Texas Relief Bill by Congress, on the 21st of February. The amount agreed upon by the committee of conference was \$7,750,000, and was adopted by a vote of two thirds of each house. A bill was debated in the House of Representatives at Washington, granting a credit of three years on the duties on imported railroad iron. The Senate refused its assent to the bill, convinced that the true interests of the country required a protective tariff on articles that can be manufactured in the United States. Hence the immense value placed upon our coal-mines, iron, and copper, as sources of productive wealth.

On the 26th of this month, a heavy run took place upon the California banking-houses, resulting in the failure of Messrs. Adams & Co., Page, Bacon & Co., and Robinson & Co., at San Francisco.

On the 23d, the New-York State six per cent loan of \$1,000,000 was taken at Albany at 112.77 to 113.20, and an average of 113.

The money market, in February, gradually became more easy. Money was abundant on call at seven per cent, and prime commercial paper was readily taken at 8 to 10. The improved feeling of the market was such that the banks were enabled to extend their loans from \$82,244,000, early in January, to \$91,590,000, at the close of February; the specie on hand increasing at the same time from \$13,597,000 to \$16,370,000. The first week of the month, in London, was distinguished for the formation of the new Palmerston Cabinet. On the 15th, an announcement was made of a new issue of Turkish bonds to the extent of two millions sterling. treme prices of Consols in the month were 90½ to 91½; the rate of discount at the Bank of England having been five per cent since the 3d of August previous. Some hopes of peace were entertained in consequence of the appointment of Lord John Russell, as Plenipotentiary Extraordinary on the part of England, to the Convention of Vienna, and his departure on the 20th of this month for that pur-

A proclamation was issued early in the month, forbidding English subjects from dealing in Russian securities. This, however, has had no effect. The five per cent loans of Russia were firm in the London market this month, at 98 a 100. During the month, the Emperor of Russia had promulgated an ukase, ordaining the formation of a gen-

eral militia system of the Empire.

March.—A new act had been passed by the Legislature of Indiana for the establishment of a State Bank and branches. This act was vetoed by Governor Wright on the 6th.

On the 19th, intelligence reached New-York of the suspension of Messrs. Page, Bacon & Co., Adams & Co., Robinson & Co., and

others, at San Francisco.

On the 28th, there was a run upon the Bank of Commerce, Baltimore, caused by unfavorable reports as to the condition of the Bank. Confidence was fully restored upon the election of a new President.

Early in the month, a defalcation was discovered in the Pacific Bank at New-York, amounting to \$23,000, on the part of one of the book-keepers. Throughout the month of March the stock market was active in New-York, with unusually large sales of railroad bonds. The failures at San Francisco produced some uneasiness at New-York, and much inconvenience to those persons who held drafts drawn by the San Francisco bankers.

The only loan of any importance negotiated during the month, was that of the Terre Haute and Alton Railroad Company, \$1,000,000, bearing eight per cent. The subscription was completed at 75 per cent.

The foreign exchange market was less favorable than in January

and February. Sixty-day bills on London closed, for the last steamer in March, at 1094 a 110. The loans of the banks reached ninety-four millions at the close of the month, a larger sum than was noted in the following months of April and May. At the end of the month of March, Erie R.R. shares closed at 49%; Michigan Southern, 93%; Michigan Central, 821. There was a good feeling in the stock market generally, and confidence was again resumed in the forthcoming money market of Wall street.

The London money market for March was not so firm as in February. Consols sold as high as 93\frac{3}{4}, but finally closed at 92\frac{1}{6} a 93being an advance of about two per cent since the preceding month. On the 1st of the month, news had reached London of the defeat of the Russians by the Turks at Eupatoria; and on the 2d of March, intelligence reached London of the death of the Emperor Nicholas. These events gave more firmness to the English money market.

On the 28th March, the "Bills of Exchange" bill was debated in Parliament, and its second reading opposed, but was carried by a vote of 112 to 30.

April. — Owing to the financial difficulties at San Francisco, the drafts of Messrs. Page, Bacon & Co., on their New-York agents, were again refused payment on the 3d of this month. The result was, that on the 4th the firm made an assignment of their effects for the benefit of their creditors.

The early part of this year was noted for the establishment of various new Insurance Companies in this city and State. Several of these Companies, as it was afterwards discovered, were established without a bona-fide capital, and the certificates of the State Comptroller were obtained by means of fraudulent checks. Men professing to be bankers were found who were willing to prostitute their means, credit, and influence, with a view to aid in establishing, for a small fee or bribe, companies totally divested of capital or honesty.

A second mortgage loan for the sum of \$1,200,000, for the Northern Cross Railroad of Wisconsin was negotiated in the month of

April, bearing eight per cent interest.

New loans were proposed this month in behalf of North-Carolina and Virginia, but the condition of the European money market forbid the introduction of American loans, and the market at Boston and New-York was not able to sustain any large inroad upon their capital to aid Southern enterprises. At this period, Virginia State six per cents were quoted at 96\frac{3}{4}a 97, and North-Carolina at 98 a 99.

The Legislature of New-York at its present session, authorized the Ogdensburgh Railroad Company to consolidate its funded debt into

The new loans proposed in April were:

1. The Detroit City seven per cent loan, \$250,000; repayable \$50,000 in twenty-five years, \$100,000 in thirty years, and \$100,000 in thirty-five years.

2. The Brooklyn City six per cent loan of \$450,000; of which \$300,000 will be redeemable in ten years, and \$150,000 in twenty years. Only a small portion of this loan was taken, at 102.

3. New-York and Harlem Railroad loan of \$750,000, secured by a second mortgage, the bond bearing seven per cent interest. The terms upon which this loan was negotiated have not yet been made public.

4. Toledo and Illinois, and Lake Erie, Wabash and St. Louis Railroad first mortgage bond, \$800,000, bearing seven per cent interest.

5. Virginia and Tennessee Railroad second mortgage bond, \$1,000,000. Only \$62,000 of this loan was taken in New-York, at the date fixed, but the Company made arrangements subsequently to obtain the funds required to prosecute their work.

In the London market a notice was promulgated, on the 15th, by the Chancellor of the Exchequer, that a new loan of sixteen millions sterling was proposed by the government. This loan was readily taken on the 20th, by Messrs. Rothschild, on behalf of themselves and others.

On the 5th of this month, the Bank of England reduced its rate of

discount from 5 to 41 per cent.

Three days after this new loan was taken, news reached London that the conference at Vienna had terminated without any favorable results. The result was a decline in Consols, followed by a more feverish market. A thorough prosecution of the war was determined on by the Allies, and on the 25th the blockade of the Baltic ports was announced.

May.—The money market in May showed an abundance of capital at reasonable rates. Stocks were in better favor. Railroad shares and bonds were in active demand at improved rates, as more confidence began to prevail as to the management, income, and expenditure of the leading roads. State loans generally had advanced to par, or within a fraction of it.

The specie in the bank vaults had increased from \$14,325,000, on the 5th, to \$15,314,000, on the 26th of the month, and their loans

varied from \$93,093,000 to \$91,160,000.

Early in this month, the banking firm of Messrs. Smead, Collord & Hughes of Cincinnati, resumed payment, after a suspension of about six months.

The new bonds issued by the city of Cincinnati to the Ohio and Mississippi Railroad Company, were taken early in May by Messrs. Duncan, Sherman & Co., and Messrs. Schuchard & Gebhart of this

city.

In London the money market had been so freely supplied with capital that the Bank of England voted, on the 3d of this month, to reduce the rate of interest from  $4\frac{1}{2}$  to 4 per cent, while consols were quoted at  $88\frac{1}{2}$  a 89. Money was abundant at  $3\frac{7}{4}$  a 4 per cent. During the month, consols fluctuated between  $88\frac{1}{4}$  and  $91\frac{7}{8}$ .

June.—On the first day of this month, intelligence reached New-York of the second suspension of Messrs. Page, Bacon & Co., at San Francisco.

The free banking law of Connecticut having been found to work disadvantageously, was repealed this month. A convention of bank

officers was held at Boston, to discuss the subject of a Bank of Mutual Redemption.

The loan of the Delaware, Lackawanna and Western Railroad Company for \$600,000, being secured by a first mortage, and bear-

ing seven per cent interest, was taken this month at par.

In the London market the announcement of the failure of Messrs. Strahan, Pauls & Bates was made on the 11th of this month. Their arrest soon followed, and a decree of bankruptcy issued. The partners were soon after arrested for fraud, and finally sentenced, in November, to transportation for fourteen years.

Notwithstanding the unfavorable advices from the Crimea as to the movements of the Allies, and their defeat on the 18th, consols were well sustained in the English market. The highest price obtained in the month was 92%, and the lowest, 90%—closing at 91%. Russian

five per cent stock sustained at 99.

The accumulation of gold in the Bank of England induced the Board to reduce the rate of interest, on the 14th, from 4 to  $3\frac{1}{2}$  per cent.

July.—The money market in July assumed a better tone. The banks were well fortified with specie, having reported an aggregate of \$16,756,000 in the middle of the month, and an increase of loans from \$91,197,000, the first week in June, to \$99,029,000, the last week in July. Stocks were more active, resulting in an advance in leading shares, compared with May preceding.

Early in July the defalcation of the Treasurer of the Eastern Railroad Company at Boston, was made known. The deficit was after-

wards ascertained to exceed two hundred thousand dollars.

A convention of bank officers was held at Syracuse on the 10th of the month, to take into consideration the subject of creating a Mutual Redemption Bank, at New-York. This measure was urged in behalf of many of the country banks, but no plan was matured that was acceptable to all the banks, and the scheme failed.

The public works of Pennsylvania were offered for sale this month at auction, at a minimum value of \$7,500,000; but no offer was

made at this limit.

A first mortgage ten per cent loan of the Galveston, Houston and Henderson Railroad Company, (Texas), was negotiated in the month of July, taken by capitalists in Germany and other portions of the

Continent, at rates considered favorable for the Company.

The European money market was disturbed by the propositions for additional loans for the allied powers. On the second day of July the Emperor of France announced a new government loan to the extent of 750 millions of francs, or about thirty millions sterling; and on the 9th a loan in behalf of Turkey was proposed in London, to be under the joint guarantee of England and France. The French loan was readily taken by French capitalists, and the offers of English capitalists were found superfluous.

Money was still extremely abundant in Lombard street, and the bankers reduced their rate of interest on deposits from 2½ to 2½ per

cent.

The debate in the House of Commons on the resolution "authorizing the crown to guarantee the payment of interest on the loan of £5,000,000 sterling to be contracted by the Sultan," and to pay that interest, if necessary, out of the national revenue, was opened on the 20th of the month, and advocated by Lord Palmerston.

The measure was opposed by Mr. D'Israeli, Mr. Cobden, Mr. Cardwell, and others; but passed by a vote of 135 to 132, and on the

23d the bill was finally passed.

Three per cent consols remained firm, being quoted at 907 the lowest, to 918 the highest, during the month. Amount of bullion in the Bank on the 21st, £16,644,000.

August.—The chief subject of discussion at the commencement of the month, was the dispute between the Cashier and President of the Mechanics' Bank of New-York, followed by the resignation of the former.

The money market in August became more easy, and the banks felt enabled to increase their loans from \$97,800,000 early in July, to \$101,154,000 in the middle of August. The increased importations from Europe had, however, caused larger exports of coin from this port, and the banks began to contract their loans from the last week in August.

Stocks maintained high prices until the latter portion of the month. Michigan Central Railroad shares reached 102; Michigan Southern, 106; Illinois Central bonds, 88; Reading Railroad shares, 97; and

other securities were well sustained in the market.

In the London market there were no material changes. Three per cent consols reached 91\frac{1}{4}, and the lowest point was 90\frac{3}{4}. Russian five per cent stock was freely quoted at 101. A new loan for France was introduced by Messrs. Rothschilds, and offers were freely made in behalf of English capitalists.

September.—After the first week in this month, the banks of this city began a curtailment of their loans, their specie funds having been reduced from \$16,700,000, in the middle of July, to \$12,000,000, on the 8th of September. This reduction of loans was continued throughout September, October, and November, accompanied by large exports of specie to Europe. Up to the end of September, however, there was no material change in the money market. Business paper was readily discounted outside the banks, at 7 to 8 per cent; and call loans were obtained at more favorable rates. About the middle of the month, intelligence reached New-York that the Bank of England had advanced the rate of discount from 3½ to 4 per cent, and its immediate effect upon the Wall street market was to depress the current values of stocks and bonds.

A marked feature of this period was the increased loans and circulation of the New-England banks, as compared with the summer and autumn of 1854. Since June, 1854, the banks of Boston alone have increased their loans from \$48,586,000 to \$54,200,000, and the circulation of the banks of Rhode-Island and Connecticut was known to be widely extended throughout the Western States, where, in ordi-

nary times, it does not readily return to the places of issue. A few weeks later, however, a slight panic arose, and the bills returned so rapidly that two or three of the banks found it difficult to meet their redemption, at Boston.

In the stock market of this month there was considerable speculation, and a temporary rise in prices occurred—particularly in Erie Railroad shares, which advanced from 51 to 56. Reading Railroad shares also were in more favor, advancing from 75, in June, to

95 a 100 per cent, in September.

The London money market for September, was more seriously affected than our own. The heavy exports of gold from England to the Continent, during the past season, had at last drawn so largely upon the Bank vaults, that some alarm was created, and even in the London journals some fears of suspension were expressed, both as to the Bank of England and the Bank of France. Such, however, was the alarm that the former institution was induced to advance the rate of interest there several times during the month. The changes, and the rate of consols, and amount of specie in the vaults, were as follows:

| Dale. | Rate of<br>Interest. | Price of<br>Consols. | Bullion in<br>Bank. |
|-------|----------------------|----------------------|---------------------|
|       | ,                    |                      |                     |
| •     | , 5                  | • •                  |                     |

The prices above quoted for consols were highly favorable, when compared with the current quotations of other government securities. A slight panic prevailed in the London market, following the advance of the rate of discount, and consols temporarily fell to 86½.

October.—The shipments of coin to Europe continued during the month, although the rates of exchange towards the latter part of it were in our favor. The stock market sustained a decline towards the end of October, produced mainly by news from Europe as to the heavy drain of gold to the East, from England and France. During the seven weeks ending on the 26th of October, there was a marked decline in State loans, as well as in railroad shares and bonds, producing several failures at the Stock Board. Indiana State five per cents declined 4 per cent; Pennsylvania, 4; Virginia sixes, 3; Missouri, 6; Louisiana, 7; and California seven per cents declined 3. In railroad shares the change was still greater, although the roads indicated a heavy business and increased profits. Thus, New-York Central Railroad shares fell from 99½ to 89½; Erie Railroad, from 53½ to 50½; Harlem Railroad, from 28½ to 22½; Long Island Railroad, from 31½ to 25½; Providence & Stonington, from 53 to 45; Reading Railroad, from 96 to 88½; Hudson River Railroad, from 41½ to 34; Michigan Central shares, from 99½ to 94½; Michigan Southern Railroad, from 100½ to 91; Cleveland and Toledo, from 87½ to 70. Railroad bonds also experienced a decline, but not to the same extent.

The leading negotiation of the month was the New-York State six

per cent loan of \$1,250,000, reïmbursable in the year 1883. The bids were opened on Thursday, the 25th, the accepted ones ranging from 115.50 to 119.01.

The fall in stocks was accompanied or preceded by a decrease in the aggregate loans of the banks, during the two months of September and October, from \$100,200,000 to \$95,100,000. Bank shares, however, maintained their value in the market, the demand for perma-

nent investment being perhaps in excess of the supply.

The unfavorable changes in the stock and money markets in the present month, were mainly owing to the conflicting and indeed alarming news from Europe. For the first time, the London Times, the great exponent of public opinion in England, began not only to hint, but to discuss the question of suspension of specie payment by the Bank of England and the Bank of France. The mere suggestion of such a financial catastrophe would in itself create alarm among a large portion of capitalists and fund-holders, and produced promptly large sales at a decline. The discussion was unnecessary, as the Bank of England held £13,000,000 in gold early in October. On the 4th of the month, the Bank had increased the rate of discount from 5 to  $5\frac{1}{2}$  per cent, and again on the 18th to 6 per cent. At the latter date, consols had declined in consequence to  $87a87\frac{1}{4}$ , against  $90\frac{3}{4}a90\frac{1}{4}$  six weeks previously.

Even the reduced rate of 87 showed that the financial condition of Great Britain was still very strong, after an exhausting war of eighteen months. Our readers, or some of them, will bear in mind that during the peaceful period of 1847, the finances of that nation were in a more unfavorable position, and fears were then, with some grounds, entertained that the Bank could not maintain specie payments. On the 25th of October, 1847, (only eight years since,) this Bank had advanced the minimum rate of discount to eight per cent, and reduced largely its loan account, at a time when many merchants and several leading banking concerns were forced to suspend pay-

ment.

The results of the Cotton crop for the year just ended, (September 1,) were now made known, showing a product of 2,847,339 bales; a decrease of four hundred thousand bales compared with the year 1852-3. The crop for the preceding thirty-two years has been as follows:

### COMPARATIVE STATEMENT OF GROWTH.

| Crop of  | Bales.    | Crop of  | Bales.    | Crop of   | Bales.    |
|----------|-----------|----------|-----------|-----------|-----------|
| 18545,   | 2,847,839 | 1848-4,  | 2,080,409 | 1882—8,   | 1,070,488 |
| 1858-4,  | 2,980,027 | 1842—8,  | 2,898,875 | 1881—2,   | 987,477   |
| 1852 8,  | 8,262,862 |          | 1,688,574 | 1880—1,   | 1,088,848 |
| 1851-2,  | 8,015,029 | 1840—1,  | 1,684,945 | 1829-30,  | 976,845   |
| 18501,   | 2,855,257 | 1889-40, | 2,177,885 | 1829 - 9, | 857,744   |
| 1849-50, | 2,096,706 | 1838—9,  | 1,860,582 | 1827—8,   | 720,598   |
| 18489,   | 2,728,596 | 1837—8   | 1,801,497 | 18267,    | 957,281   |

In order to show the increasing consumption in the United States, the annexed table will give a clear view:

CONSUMED BY AND IN THE HANDS OF MANUFACTURERS, NORTH OF VIRGINIA.

| Orop of  | Bales.  | Crop of  | Bales.  | Crop of | Bales.  |
|----------|---------|----------|---------|---------|---------|
| 1854-5,  | 598,584 | 18445,   | 889,006 | 18845,  |         |
| 1858-4,  | 610,571 | 1848-4,  | 846,744 | 1888—4  | 196,418 |
| 18598,   | •       | 1842-8,  | 825,129 |         | 194,419 |
| 1851-9   | 608,029 | 1841-9,  | 267,850 | •       | 178,800 |
| 1850-1,  | 404,108 | 18401,   | 297,298 |         | 189,149 |
| 1849-50, |         | 1889-40, | 295,198 |         | 126,519 |
| 18489,   |         | 1889—9,  | 276,018 | 1828-9, |         |
| 1847—6,  |         | 1987—8,  | 246,068 | •       | 120,596 |
| 1846-7,  |         | 1886—7,  | 222,540 |         | 108,483 |
| 1845-6   |         | •        | 286,788 |         |         |

The foreign exchange market during the month of October was in our favor. Bills at sixty days on London (bankers) were quoted at 81 to 9; the export of coin for the month being \$1,188,000, and from Boston, \$1,178,000.

November.—The unfavorable effect upon the money market of Wall street noted at the close of October, was still visible early in November. A strong desire prevailed to realize in stocks, and the low prices continued throughout the month. The rates for money were exorbitant during the whole month. Prime business paper was sold at 12 to 15 per cent, and second and third-class paper was difficult to negotiate at any price. The supply of money available on "call loans" was curtailed, and borrowers on stock securities were compelled in many instances to pay 1½ to 2 per cent per month, allowing a liberal margin for a further decline.

The results of the fiscal year of the United States (ending 30th June, 1855) were made known this month: showing total exports, amounting to \$275,156,846, and imports, \$261,382,960. This is a favorable exposé when compared with the year 1853—4; but still shows an immoderate import trade, much beyond the reasonable wants of the country; as these heavy importations have exhausted sixty-six millions of gold during the year. To demonstrate this, we annex the following resumé for the past eleven years:

# EXPORTS FROM THE UNITED STATES TO FOREIGN PORTS.

| Year<br>ending<br>June 80. | Domestic<br>Produce. |                 | Foreign<br>Produce.         |       | Specie and<br>Bullion. |               | Total<br>Exporte, |
|----------------------------|----------------------|-----------------|-----------------------------|-------|------------------------|---------------|-------------------|
| 1845,                      | \$98,455,830         |                 | \$7,594,781                 |       | 88,606,495             |               | \$114,646,606     |
